INTRODUCTION

BACKGROUND

In February 2021, the City of Santa Rosa (City) embarked on developing a comprehensive, system-wide report for parks and roadway landscapes maintained by the Recreation and Parks Department that would be a tool to prioritize the allocation of funding for improvements.

The City's park system is divided by Highways 101 and 12, creating four quadrants, and is made up of over 1,000 acres contained in over 100 park sites and over 70 acres of roadway landscapes. 85 of Santa Rosa's parks and 13 acres of roadway landscapes were assessed as a part of this report. Park sites are categorized into six park types, including neighborhood parks, community parks, special purpose parks, open spaces, public gathering areas and plazas, and trail parks. A number of city parks were not included as part of this report due to being under development. The selection of roadway landscapes that were evaluated represent a sample of the roadway landscape conditions found throughout the City to provide a general understanding of the overall condition of roadway landscapes maintained by the Recreation and Parks department.

Though the City's Recreation and Parks Department maintains all park sites on a scheduled basis, and a maintenance contractor provides mowing and blowing services at all park sites, the condition of park sites continue to be burdened by an insufficient quantity of maintenance staff since the 2008 economic recession. This has resulted in the current state of the City's park system, which has a substantial number of deferred maintenance deficiencies that need to be

Figure 1: Citywide Parks Map

addressed in order to uphold the condition of parks to a standard that provides value to the community.

Measure M – Parks for All, a sales tax that funds park improvements and maintenance, was passed by Sonoma County voters in 2018. Measure M funds, in addition to other funding sources, provides the City with the opportunity to begin addressing deferred maintenance needs across the park system. This report evaluates existing parks and roadway landscapes and determines the prioritization of these facilities to enable the City to make objective decisions on how to best utilize available funds for park improvements.

PURPOSE

The Parks Prioritization Report determines a ranking for each park facility based on the level of need it has for new improvements. The City will utilize the report to develop an effective approach to using the financial resources available to improve park infrastructure. This system-wide ranking provides the City with a decision-making tool to

help determine how best to allocate funding for improvements across the entire system. A methodology using both qualitative and quantitative data was created to determine the objective system-wide ranking. Objectivity was an essential factor in determining park and roadway landscape rankings to ensure proper and efficient use of City financial resources.

The report will be primarily viewed and used by Park Planning Staff to make decisions on future capital improvement projects and by Parks Maintenance Staff to identify park amenities that are in critical need of attention. The report is also a resource for City Council and the Board of Community Services to assist in making informed decisions regarding park improvement projects and for the community to gain a holistic understanding of not only the parks in their neighborhood but also the condition of parks throughout the city. Application of this report will help move towards an improved park system that provides enjoyment and added play value to the community.

HOW TO USE THIS REPORT

Introduction: Explains the reasons for the development of the report and who the Report was written for. It also includes a summary of updates to the Report.

Process: Describes the approach to creating the prioritization ranking and the methodologies used for each ranking and supplemental category. Also includes a summary of the financial resources available for park improvements.

Park Ranking: Includes a cut sheet for each park and roadway landscape that contains the data for each ranking and a supplemental category specific to that site. Parks are sorted into the six park types and ordered alphabetically within each park type grouping.

Analysis: Includes an analysis of findings from the ranking results by evaluating the highest rank parks across the City within each quadrant and based on cost.

Acknowledgments: Includes a list of contributors to the Report.

Appendices: Includes references that supplement information described in the Report. A glossary can be found that describes terminology used within the Report.

REVISIONS

The Report is a living document that will periodically receive updates to reflect changes in the condition of existing parks as well as the addition of new parks into the City's park system. This section summarizes updates made to the report.

#	DATE	DESCRIPTION

Figure 2: Revision Table

PROCESS

CONDITION ASSESSMENT

The team performed a system-wide condition assessment to determine the current state of each park and roadway landscape. This included the evaluation of all the assets and amenities found at each site.

Prior to site investigations, an asset and amenity list was developed as well as an established rating criteria for each type of asset, see Figures 9 and 10. Amenities are defined as attributes of a park that have a designated use, such as sports fields, playgrounds, and dog parks. Assets are defined as specific components that make up a park amenity. For an amenity such as a playground, the assets would be identified as the play equipment, play surfacing, perimeter fencing, and so forth, see Figure 3 for examples.

The asset and amenity list represent all typical conditions across the park system. The rating criteria establishes a common scale in order to maintain objective results. For the site investigations, assets within each category were rated based on the rating criteria. The average rating of all the assets within an amenity was calculated to determine the amenity rating. The same approach was used to assess both park and roadway landscape conditions, though fewer amenities were identified to capture the components of a roadway landscape. In a number of cases, critical assets were established within an amenity. A critical asset is an asset that is essential to the function and usability of an amenity. The rating of an amenity cannot exceed the rating of its critical assets. The rating of an amenity will defer to the rating of its critical assets if the critical asset rating is lower than the average rating of all the assets.

A number of amenities, including irrigation, lighting, drainage, structures, and water features, were initially given a limited assessment due to the limitations posed for testing and verifying the functionality of such amenities. For these limited assessment items, checklists were developed for Park Maintenance Staff, who are more familiar with these items, to provide input. The combination of site investigations and city staff input resulted in a more complete and accurate conditions assessment.

Select structures, which had already been evaluated in the Facilities Condition Assessment (2018), were excluded from the assessment. These structures included buildings, such as community centers and restrooms, swimming pool facilities, shade structures, and bridges. Riparian zones and natural landscape areas that do not receive regular maintenance, such as weeding, pruning, and blowing, were also excluded from the assessment since they are not perceived as potential candidates for capital improvements unlike typical park amenities.

The result of the condition assessment provides a rating for each asset and amenity for a given park. The data was used to generate an overall condition ranking for the park to be used as one of the priority ranking categories, which is further explored in the next chapter.

RANKING METHODOLOGY

This Report provides an overall ranking of each park that is represented by a weighted average of four categories: condition, level of recreation programming, play value, and degree of accessibility. The ranking can be used to compare a park's level of priority against other parks within the City's park system. The lower the park ranking, the higher the priority it is for improvements. The overall priority ranking is a weighted average of the four priority ranking categories; condition is weighted at 70%, while recreation programming, play value, and accessibility are each weighted at 10%, see Figure 4.

Rankings for roadway landscapes are exclusively based on the condition ranking due to the fact that rankings within the three other categories do not vary when applied to roadway settings. Figure 5 represents the ranking system for each priority ranking category and how they impact the overall park rank. The supplemental categories provide additional information for each park amenity that do not impact the overall park ranking, this includes a cost estimate for the replacement of each amenity and the estimated life span remaining for each amenity.

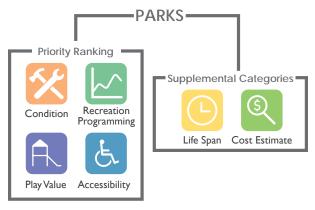

Figure 5: Park and Roadway Categories

OVERALL PRIORITY RANKING =

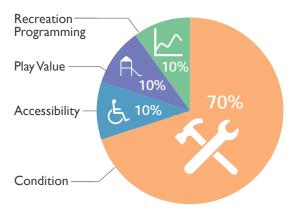

Figure 4: Priority Ranking Weighted Values

Similar to the conditions assessment, assets such as buildings, swimming pools, shade structures, bridges, and riparian areas were not taken into account when calculating the results for the priority ranking categories or supplemental categories. Buildings, swimming pools, shade structures, and bridges were not taken into account for the priority ranking categories or supplemental categories because they were already evaluated in the Facilities Condition Assessment (2018). Riparian areas were not taken in account because riparian areas are never completely replaced, and instead require mitigation.

Figure 6: Priority Ranking Categories

PRIORITY RANKING CATEGORIES

Condition

The condition ranking of each park and roadway landscape is the average of the condition of all amenity ratings assigned to each site. The condition ranking compares sites to a "new" site, and not sites to each other. The condition ranking contributes the most to the overall park rank at a weighted value of 70% of the total park ranking. Condition is the primary driver for how a park should rank relative to other parks due to condition being the best indicator for a park's need for improvements. The other ranking categories are intended to distinguish the priority between parks with similar condition rankings.

Recreation Programming

Recreation programming was used to evaluate how frequently an amenity is utilized by the community. The data used to develop the ranking method was the amount of revenue generated by the amenities within a park. The City does not have available data collected to

quantify park usage, therefore revenue amounts generated at the parks provide quantifiable data to evaluate the level of programming that occurs, as well as the frequency of use of an amenity. Revenue generation fee data from 2019 is used in this report to generation the recreation programming ranking.

Park rankings and individual amenity rankings for recreational programming used a one through five numerical ranking system with a revenue range for each rank. The table below identifies the range of revenue generation associated with each rank:

RECREATION PROGRAMMING RANKING	REVENUE GENERATION AMOUNT				
1	OVER \$50K				
2	\$10K TO \$50K				
3	\$5K TO \$10K				
4	\$1 TO \$5K				
5	\$0				

Figure 7: Recreation Programming Ranking

Figure 8:Recreation Programming Scale

Condition Rating Criteria

General

- New or near new condition, no visible defects
- No longer new, light / normal signs of wear, superficial damage / no major defects
- Functioning as intended, noticeable signs of deterioration, some minor repairs are required
- 2 | Multiple major defects, Signs of excessive wear, not fully functioning, needs substantial repair
- 1 Not functional, unsafe to use, replacement is required

Hardscape / Surfacing

- New or near new condition, no visible defects
- No longer new, light / normal signs of wear, superficial damage / no major defects. Sand, gravel or mulch with light weed growth.
- 3 | Surface is moderately worn with limited cracking and lifting, markings need maintenance. Sand, gravel or mulch with significant weed growth
- Surface is heavily worn and uneven throughout, with major cracking and lifting, markings worn or absent. Sand, gravel or mulch is thin / bare in spots, weedy
- Hazardous: major holes, buckling or erosion. Sand, gravel or mulch is missing / heavily eroded.

Signage

- New or near new condition, no visible defects, fully legible
- No longer new, light / normal signs of wear, fully legible
- Functioning as intended, noticeable signs of deterioration, some minor repairs are required
- Multiple major defects, signs of excessive wear, not fully legible, needs substantial repair
- Not functional, unsafe to use, replacement is required, illegible

Turf / Ornamental Landscape

- Vigorous and healthy, no signs of defect
- Moderate levels of annual weeds and gaps / dieback can be addressed with regular maintenance
- 3 Weedy, significant gaps / dieback requiring rehabilitation
- 2 Major defects, rehabilitation not expected
- Dead or missing plant material, potentially hazardous

Unplanted Landscape

- Fresh mulch, little to no weed growth
- 4 | Mostly mulched with moderate weed growth, needs regular maintenance
- 3 | Patchy mulch with significant weed growth, needs significant work
- 2 Little to no mulch present, very weedy
- 1 No mulch present, noxious weeds observed, potential fire hazard

Trees

- 5 All trees appear vigorous and healthy, with no obvious structural damage.
- 4 | Most trees appear vigorous and healthy, with limited signs of structural damage and dieback.
- 3 | Mixed canopy with up to 25% of trees showing signs of significant structural damage or dieback.
- More than half of trees appear unhealthy or have significant signs of structural damage and dieback.
- 1 | Most trees have significant damage or dieback, or are dead; trees should be assessed for hazards.

Lighting

- City Standard, new LED fixtures
- 4 LED fixtures, not new but fully functional and in good condition
- 3 | Fixtures not LED, but system is fully functional and in good condition
- Fixtures not LED; parts of the system are damaged or not functional
- Lighting not functional

Figure 9: Condition Rating Criteria

Irrigation

- 5 | New system, equipment meets current City standards and is designed for MWELO
- 4 Equipment meets current City standards and is water efficient, normal maintenance needs with no major problems.
- 3 Outdated equipment doesn't meet City standards, system functional but not water efficient
- 2 Outdated equipment, parts of system are not functional, has multiple minor leaks, coverage problems apparent from plant dieback
- 1 | Major system breaks / not functional

Figure 9 (continued): Condition Rating Criteria

Condition Rating Examples

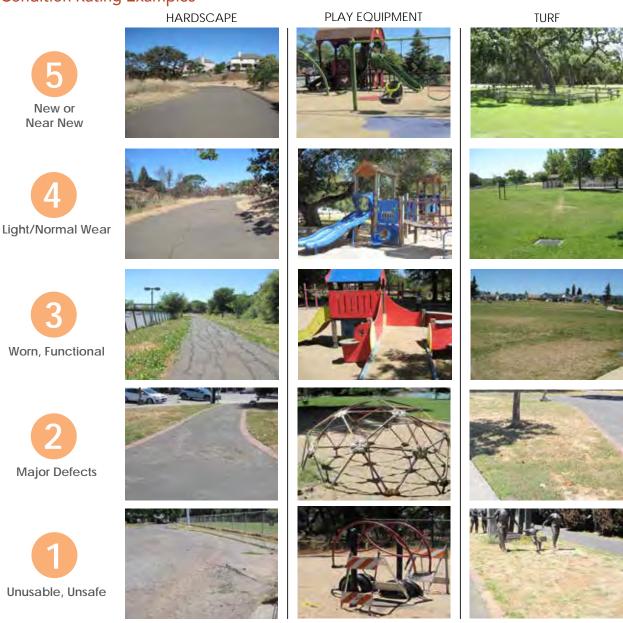

Figure 10: Condition Rating Examples

Play Value

Play value identifies high-touch amenities that are associated with active uses such as exercise, recreation, and organized activities. Such amenities frequently experience rigorous use and therefore accelerated wear. Examples of high play value amenities include playgrounds, sports fields, and sports courts. Amenities with minimal or no play value are associated with passive use amenities or park infrastructure amenities that are not high-touch surfaces. Examples of low park value amenities include drainage, irrigation, and lighting. Each amenity received a play value ranking based on the play value ranking table in Figure 11. Each park's play value ranking is the same as its lowest value play value ranking amenity.

Accessibility

An ADA assessment is an evaluation of an existing condition's compliance with the American with Disabilities Act (ADA) regulations, which establishes accessibility standards for properties to serve people with disabilities. ADA assessments were

AMENITY	PLAY VALUE RANKING

General Structures	5

Figure 11: Play Value Ranking

Figure 12: ADA Ranking Scale

conducted in 2013 and 2016 for the City's parks system, which identified ADA deficiencies for the majority of parks. As part of this report, the existing 2013 and 2016 assessments were reviewed and evaluated on-site to verify whether or not items within those reports have been addressed.

The accessibility rankings in this Report are to not be utilized independently as the only source for ADA compliance information for parks.

ADA items were ranked based off of how hazardous an item is and how much the item impedes someone's ability to access park amenities, see Figure 13 for examples. Deficiencies that are more hazardous to users would result in a lower rank, implying the priority for replacement of this amenity is greater. Amenities receiving a lower rank on this scale will be elevated in priority for replacement. ADA items pertaining to restrooms, interior of buildings, or face of buildings were not evaluated as part of this Report.

The average rank of all the ADA accessibility deficiencies found within an asset will be used to determine the rank of each amenity. The total park rank is determined by using a weighted average

ADA ranking examples

Ranking	Examples of ADA Deficiencies						
5	ADA assessment reports did not identify any deficiencies or deficiencies have been addressed						
4	Door or gate not in compliance (requires >5lbs of force to operate or is missing kick plate)						
	Sign: present but is not in compliance (mounting height, text size, location, content)						
	Striping faded (crosswalks, ADA parking stalls)						
3	Obstruction of overhead clearance						
	Some accessible furnishings or companion seating provided, but the minimum is not met						
	Required sign or striping missing						
	Play Areas: No transfer system or transfer system not in compliance with ADA						
	Diameter of handrails at ramps not between 1.25" and 1.5"						
2	No landing, landing too short, or landing slopes along path of travel						
	No accessible furnishing, companion seating, or other accessible space is provided						
	Distance between accessible access points is not compliant						
	Drinking fountain not high/low						
	Transfer system does not serve at least 50% of elevated play components						
	Minimum number of ground level play components on accessible route not met						
	Non-compliant play area path width (36" < 60")						
	Play Equipment is not in compliance with ADA; not a safety hazard*						
1	Lifting, cracks, or gaps in pavement						
	Non-compliant slope or cross-slope						
	Surfacing is not accessible						
	Missing truncated domes						
	Curb ramp not in compliance						
	Play Equipment is not in compliance with ADA; safety hazard*						

Figure 13: ADA Ranking Examples

of all amenity rankings. The weighted average takes into account the quantity of ADA deficiencies within an amenity along with its average rank.

In the situation that ADA reports were not available for a park, the ADA ranking matches the condition ranking. This approach was determined using the rationale that ADA deficiencies are assumed to be more prevalent at parks that are in poor condition and compliance with ADA standards are assumed to be more likely met at parks in newer and better condition.

SUPPLEMENTAL CATEGORIES

Life Span

The life span category provides an approximate duration of time remaining until an amenity needs to be replaced. Approximate total life spans were determined through research, consultation with manufacturers, and professional opinions. The remaining life span of an amenity is calculated by taking a percentage of the total life span. The percentage is based off the amenity's conditions ranking, see Figure 14 and 15.

CONDITION RATING	
*	% OF USEFUL LIFE SPAN REMAINING
5	100%
4	75%
3	50%
2	25%
1	0%

Figure 14: Useful Life Span Remaining

For general park categories, such as general furnishings, each category is given an average life span based upon its most common or prevalent components. In the case of furnishings, the prevalent components include benches and tables.

For amenities with a mixture of elements with different life spans, the life span for the amenity is based on its "critical item." If the critical item is in poor condition, then the amenity itself is no longer usable or cannot be properly used, and the condition cannot be adequately resolved through repair. For example:

Tennis courts: The critical item is surfacing. If the surfacing has a lot of cracks and bumps, then the tennis court cannot be used properly. Even if the net and fence are in pristine condition, play will be hindered by the condition of the surface. It is assumed that once surfacing has reached the end of its useful life, the extent of work required to repair it will justify improvement of the entire amenity.

Playgrounds: The critical item is the play equipment. Even though surfacing is critical to playground safety and function, it is reasonable to expect to repair or replace surfacing without replacing the entire amenity. Replacement of equipment, however, would require replacement of the whole amenity, including surfacing.

ASSET	TOTAL LIFE	CONDITION	%	LIFE SPAN
	SPAN	**		L
TABLE	20	4	75%	15 YEARS

Figure 15: Life Span Calculation

Cost Estimate

The cost estimate process for determining a replacement cost for each amenity, as well as for the total park, required a two-step process. Step one involved extracting the square footage of each amenity within the park using data provided by the City's GIS database. Step two involved determining a unit cost per square foot for each amenity using recent bid results.

Bid results from the past few years were compiled to determine the average unit cost per square foot for each amenity. Each unit cost number acquired from a bid result was adjusted to accommodate inflation to reflect anticipated 2022 bid costs. The unit costs for construction were then adjusted to account for soft costs including design, surveying, engineering, testing, inspections, and City administration across the board.

The square footage for each amenity is multiplied by the unit cost to generate an estimate of combined construction costs and soft costs required to replace each amenity. The sum of all amenity replacement costs amounts to the total estimated cost to replace all the amenities in the park.

Structures, including community centers and restrooms, swimming pool facilities, shade structures and bridges, in addition to riparian zones within parks, were excluded from the estimated replacement costs.

Park Amenity	Estimated Design + Construction Cost (Unit Cost per SF)
General Furnishings	\$0.75
General Landscape	\$3.66
General Trees	\$0.38
General Hardscape	\$46.82
General Irrigation	\$4.76
General Lighting	\$0.80
General Barriers	\$0.31
General Signage	\$0.32
General Drainage	\$1.97
General Structures	\$279.72
Picnic Areas	\$74.36
Parking Lot	\$26.38
Fitness Equipment	\$77.57
Playground	\$124.22
Tennis Court	\$31.84
Pickleball Court	\$22.72
Bocce/Horseshoe Court	\$45.99
Basketball Court / Handball	\$24.43
Volleyball Court	\$33.57
Soccer Field	\$7.76
Softball/Baseball Field	\$32.83
Football Field	\$6.45
Track and Field	\$23.40
Trails	\$12.50
Dog Park	\$20.32
Skate Park	\$56.70
Bike Pump Track	\$41.44
Water Feature	\$207.20
Sprayground	\$1,165.10
Community Gardens	\$54.23

Figure 16: Estimated Unit Cost Table

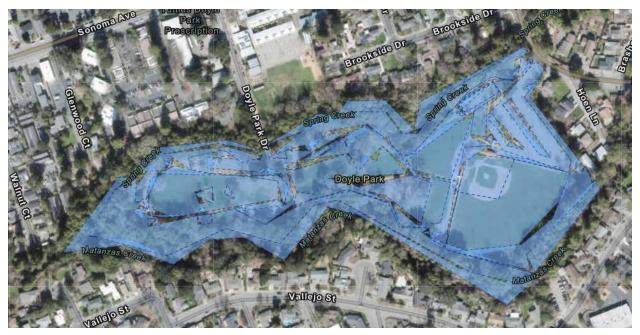

Figure 17: Asset Areas Extracted from GIS

FUNDING SOURCES

As this Report provides a holistic overview on the City's parks and roadway landscapes, and the prioritization of their need for improvement, this chapter reviews the available funding sources. The funding sources available for capital projects excludes the department's funds that are dedicated for operations and maintenance. Funding sources for capital projects include the Measure M -Parks for All sales tax, park development impact (PDI) fees, and grant funding. General Fund contributions are typically not available for capital improvements, however, they do contribute toward maintenance and operation efforts for parks. All revenue generated by park facilities is directed to the General Fund and not to the Recreation & Parks Department.

Measure M

Measure M – Parks for All is a sales tax that supports Sonoma County's regional and city parks, and is estimated to provide \$1.9 million to Santa Rosa between the years of 2019 and 2029. Santa Rosa's City Council has approved the following allocation of Measure M funding: utilize approximately 50% of funds for capital improvements, utilize approximately 40% of funds for park maintenance enhancements, utilize approximately 10% of funds for recreation programming enhancements. This approved funding plan allocates \$950k annually to capital improvements that follow the specific allowable uses as defined in the Sonoma County Measure M Expenditure Plan. Allowable capital improvements include improving and developing athletic fields, playgrounds, restrooms, picnic areas and visitor amenities; creating and expanding parks, trails, bikeways, public art, and recreation and historical facilities; and planning and developing bike paths and trails with connections to schools, community spaces and regional trails; and improving trails along waterways and riparian areas to benefit fish, wildlife, habitat, and water quality.

Park Development Impact Fees

Park Development Impact (PDI) fees are revenue sources for capital projects. PDI fees are one-time fees paid by developers in-lieu of park land dedication, for the City to utilize for development of new parks or improvements to existing park facilities. PDI fees collected for each quadrant must be utilized on capital projects within the same quadrant and must be used for the development of new amenities or complete replacement of existing amenities and cannot be used for minor repair or maintenance. PDI revenue is dependent on the development market and varies year to year.

Grant Revenue

Grants are another important source of funding for building new, and renovating existing park facilities. Grant funding is available from various sources and is subject to wide variance from year to year. Grant funding is commonly received on a reimbursement basis and may be subject to a local match requirement where local funds must be utilized from an appropriate funding source.

PARK RANKING

PARK RANKING

The park ranking chapter consists of the ranking results for each park and roadway landscape. The parks and roadway landscapes are organized into subchapters based on park type or roadway landscape, which include:

Community Parks

Neighborhood Parks

Open Spaces

Public Gathering Areas & Plazas

Special Purpose Parks

Trail Parks

Roadways Landscapes

At the beginning of each sub-chapter, a summary matrix is provided as an overview of each park that is included within the given park type. Within each sub-chapter, the parks are organized in alphabetical order. The following represents the color coding found within the ranking matrix of each park and roadway landscape based on each amenities rank, where 1 is the highest priority and 5 is the lowest priority.

- 1.0 to 1.9, highest priority
- 2.0 to 2.9
- 3.0 to 3.9
- 4.0 to 4.9
- 5.0, lowest priority

COMMUNITY PARKS

COMMUNITY PARKS

Twelve community parks that are owned and maintained by the City were evaluated as part of this report. This section evaluates the priority ranking of each community park based on condition, recreation programming, play value, and accessibility. In addition, the approximate lifespan and the estimated replacement cost is provided for each amenity as well as the overall park. Parks with a priority ranking closer to one (1) are identified as having a higher priority for new improvements, while parks that rank closer to five (5) have a lower priority for improvement needs. The table below identifies the community parks in order of priority ranking, the parks identified in gray were not assessed by this Report.

Co	Community Parks - Ranked by Priority Ranking								
Rank	Park	Priority Ranking	Lifespan	Area (Acres)	Estimated Replacement Cost	Quadrant	Park Type		
1	Youth Community Park	2.5	15.1	73.8	\$ 44,837,076	NW	СР

PRIORITY OUT OF 12 COMMUNITY PARKS

SUMMARY

A Place to Play Community Park is a 77.2 acre community park located in the northeast quadrant of Santa Rosa, CA. The park contains picnic areas, a parking lot, playgrounds, athletic fields, trails, a dog park, and a remote-control car race track.

The overall condition of the park is adequate, and a majority of the amenities are fully functional. A Place to Play Community Park has a high level of recreation programming, very high play value, and has a few significantly non-compliant ADA features.

The critical condition amenities within the park are the general hardscape and signage. Concrete pavement is cracked and uneven in places and the decomposed granite has significant weeds. There are park rules signs in poor locations and interpretive signs that are damaged and illegible.

RANKING MATRIX - A PLACE TO PLAY

DOYLE COMMUNITY PARK

PARK TYPE

QUADRANT

SIZE (ACRES) 21.8

ADDRESS 700 Doyle Park Dr

PRIORITY OUT OF 12 COMMUNITY PARKS

SUMMARY

Doyle Park is a 21.8 acre community park located in the northeast quadrant of Santa Rosa, CA. The park contains athletic fields, multiple picnic areas, playgrounds, a dog park, horseshoe courts, and fitness equipment stations along the park's walking path.

The overall condition of the park is adequate, with a majority of the amenities functional and a few in need of servicing. Doyle Park has a very high level of recreation programming, very high play value, and has a number of significantly non-compliant ADA features.

The critical condition amenities within the park are the fitness equipment, parking lot, and storage sheds. The fitness equipment is damaged due to excessive wear and is unsafe to use, the parking lot has substantial cracking and undulations throughout the asphalt pavement, and the storage shed has signs of severe deterioration.

FINLEY COMMUNITY PARK

PARK TYPE

QUADRANT

SIZE (ACRES) 12.2

ADDRESS 2060 West College Ave

PRIORITY OUT OF 12 COMMUNITY PARKS 7

SUMMARY

Finley Community Park is a 12.2 acre community park located in the northwest quadrant of Santa Rosa, CA. The park contains picnic areas, a parking lot, playgrounds, and multiple sport courts.

The overall condition of the park is adequate, and a majority of the amenities are fully functional. Finley Community Park has a high level of recreation programming, high play value, and has a few significantly non-compliant ADA features.

The critical condition amenities within the park are the playground and volleyball court. The playground rubber surfacing is deteriorating and peeling back in some areas and the playground equipment is showing significant wear. At the volleyball court, the net is missing and the sand surfacing has significant weed growth.

HOWARTH COMMUNITY PARK

PARK TYPE

QUADRANT

SIZE (ACRES) 137.8

ADDRESS 630 Summerfield Road

PRIORITY OUT OF 12 COMMUNITY PARKS

SUMMARY

Howarth Park, home of camp Wa-Tam, is a 137.8 acre community park located in the southeast quadrant of Santa Rosa, CA. The park contains various amenities including, but not limited to, picnic areas, playgrounds, athletic fields, sport courts, trails, and a lake with a boat launch.

The overall condition of the park is adequate, and a majority of the amenities are fully functional. Howarth Park has a very high level of recreation programming, very high play value, and has a number of significantly non-compliant ADA elements.

The critical condition amenities within the park are the playgrounds and tennis courts. The sand play areas have low levels of sand and portions of the tennis court surfacing have substantial cracking, making those areas unplayable.

NEIGHBORHOOD PARKS

NEIGHBORHOOD PARKS

Fifty neighborhood parks that are owned and maintained by the City were evaluated as part of this report. This section evaluates the priority ranking of each neighborhood park based on condition, recreation programming, play value, and accessibility. In addition, the approximate lifespan and the estimated replacement cost is provided for each amenity as well as the overall park. Parks with a priority ranking closer to one (1) are identified as having a higher priority for new improvements, while parks that rank closer to five (5) have a lower priority for improvement needs. The table below identifies the neighborhood parks in order of priority ranking, the parks identified in gray were not assessed by this Report.

SUMMARY

Bayer Park and Gardens is a 6.0 acre neighborhood park located in the southwest quadrant of Santa Rosa, CA. The park contains a skate park, picnic areas, a parking lot, fitness equipment, playgrounds, sport courts, and a community garden.

The overall condition of the park is very good, a majority of the amenities are functional, and the park is not anticipated to need major improvements in the near-term. Bayer Park and Gardens has a high level of recreation programming, very high play value, and does not have non-compliant features identified by the 2013 and 2016 ADA assessments.

There are no critical condition amenities within the park. However, the playground mulch will soon need replenishing and the volleyball court does not have a net.

PRIORITY OUT OF 50 COMMUNITY PARKS 23

SUMMARY

Brush Creek Park is a 2.2 acre neighborhood park located in the northeast quadrant of Santa Rosa, CA. The park contains picnic areas, a playground, handball court and basketball court.

The overall condition of the park is adequate, and a majority of the amenities are fully functional. Brush Creek Park has minimal recreation programming, very high play value, and has a few significantly non-compliant ADA features.

The critical condition amenities within the park are the picnic areas, which have uneven surfacing within the concrete pavement and pavers.

PRIORITY OUT OF 50 COMMUNITY PARKS 50

SUMMARY

Coffey Park is a 5.9 acre neighborhood park located in the northwest quadrant of Santa Rosa, CA. The park contains picnic areas, playgrounds, fitness equipment and a dog park.

The overall condition of the park is very good, a majority of the amenities are functional, and the park is not anticipated to need major improvements in the near-term. Coffey Park does not have recreation programming, has very high play value, and does not have non-compliant features identified by the 2013 and 2016 ADA assessments.

There are no critical condition amenities within the park, though portions of dried turf imply there is deficient coverage by the irrigation system.

QUADRANT

SIZE (ACRES) 2.8

ADDRESS 2036 Bedford St

PRIORITY OUT OF 50 COMMUNITY PARKS 24

SUMMARY

Colgan Creek Park is a 2.8 acre neighborhood park located in the southeast quadrant of Santa Rosa, CA. The park contains picnic areas, playgrounds, a basketball court, and a trail.

The overall condition of the park is adequate aside from a few deficient amenities. Colgan Creek Park does not have recreation programming, has very high play value, and has a few significantly non-compliant ADA features.

The critical condition amenities within the park are the playground and trails. The playground equipment shows signs of excessive wear and broken components with weeds growing in the sand surfacing. The trails have major cracking throughout the asphalt pavement.

SUMMARY

Haydn Park is a 0.1 acre neighborhood park located in the northeast quadrant of Santa Rosa, CA. The park contains a playground and natural turf.

The overall condition of the park is good, and a majority of the amenities are fully functional. Hadyn Park does not have recreation programming, has low play value, and has a few noncompliant ADA features.

The critical condition amenity within the park is the playground equipment, which is showing excessive wear due to its age.

SIZE (ACRES) 8.2

ADDRESS 3455 Bonita Vista Ln

PRIORITY OUT OF 50 COMMUNITY PARKS 8

SUMMARY

Hidden Valley Park is a 8.2 acre neighborhood park located in the northeast quadrant of Santa Rosa, CA. The park contains picnic areas, a playground, and trails.

The overall condition of the park is adequate, and a majority of the amenities are fully functional. Hidden Valley Park does not have recreation programming, has very high play value, and has a few significantly non-compliant ADA features.

There are no critical condition amenities within the park, though the gravel paths on the trails have uneven surfacing, noxious weeds were found within the natural landscape, and trash receptacles appear to be deficient.

JACOBS PARK (LINCOLN SCHOOL)

PARK TYPE

QUADRANT

SIZE (ACRES) 6.9

ADDRESS 828 W Ninth St

PRIORITY OUT OF 50 COMMUNITY PARKS

SUMMARY

Jacobs Park (Lincoln School) is a 6.9 acre neighborhood park located in the northwest quadrant of Santa Rosa, CA. The park contains picnic areas, a playground, and athletic fields.

The overall condition of the park is poor, with a number of the amenities being excessively worn and having missing or damaged components. Jacobs Park has minimal recreation programming, very high play value, and has a few significantly non-compliant ADA features.

The critical condition amenities within the park are the playground, baseball field, and volleyball court. The playground equipment is heavily worn and is missing components, and the playground rubber tile is deteriorating and creates a tripping hazard. The baseball field has weeds throughout the infield and illegible signage. The volleyball court surfacing is dead turf, the net posts are damaged, and the net is missing.

JENNINGS PARK AT HELEN LEHMAN EMENTARY SCHOOL

PARK TYPE

QUADRANT

SIZE (ACRES) 6.6

ADDRESS 1688 Clover Ln

PRIORITY OUT OF 50 COMMUNITY PARKS 11

SUMMARY

Jennings Park at Helen Lehman Elementary School is a 6.6 acre neighborhood park located in the northwest quadrant of Santa Rosa, CA. The park contains softball fields and soccer fields.

The overall condition of the park is adequate, and a majority of the amenities are fully functional. Jennings Park has minimal recreation programming, very high play value, and does not have non-compliant features identified by the 2013 and 2016 ADA assessments.

The critical condition amenity within the park is the irrigation system, where extensive dieback is observable within the natural turf. Temporary trash receptacles are present, which suggests a deficient number of permanent receptacles in the park.

RANKING MATRIX - JENNINGS PARK AT HELEN LEHMAN ELEMENTARY SCHOOL

MARTIN LUTHER KING JR. PARK

PARK TYPE

QUADRANT

SIZE (ACRES) 5.4

ADDRESS 1208 South **Hendley St**

PRIORITY OUT OF 50 COMMUNITY PARKS 2

SUMMARY

Martin Luther King Jr. Park is a 5.4 acre neighborhood park located in the southeast quadrant of Santa Rosa, CA. The park contains picnic areas, a parking lot, a playground, a basketball court and soccer fields.

The overall condition of the park is below adequate, with some amenities in poor condition, while others remain fully functional. Martin Luther King Jr. Park has minimal recreation programming, very high play value, and has a few significantly non-compliant ADA features.

The critical condition amenities within the park are the landscape, hardscape, sheds, parking lot, and basketball court. The landscape is weedy and a portion of the turf is damaged, the hardscape has large holes in the asphalt pavement, the storage shed and parking lot surface have excessive wear, and the basketball surfacing has major cracking and weed growth. The decomposed granite surfacing in the picnic area also has substantial weed growth.

ADDRESS

151 Santa Rosa Ave

PRIORITY OUT OF 50 COMMUNITY PARKS 46

SUMMARY

Prince Memorial Greenway is a 4.1 acre neighborhood park located in the northwest quadrant of Santa Rosa, CA. The park contains a walking path along a creek with occasional seating and landscape areas.

The overall condition of the park is adequate, and a majority of the amenities are fully functional. Prince Memorial Greenway does not have recreation programming, has low play value, and does not have non-compliant features identified by the 2013 and 2016 ADA assessments.

The critical condition amenity within the park is the irrigation system, which was indicated to be non-operational due to the lack of mainline and backflow installation.

STRAWBERRY PARK

PARK TYPE

QUADRANT

SIZE (ACRES) 5.8

ADDRESS 2311 Horseshoe Dr

PRIORITY OUT OF 50 COMMUNITY PARKS 44

SUMMARY

Strawberry Park is a 5.8 acre neighborhood park located in the southeast quadrant of Santa Rosa, CA. The park contains a natural turf area and a trail alongside a riparian habitat.

The overall condition of the park is good, and a majority of the amenities are in good condition. Strawberry Park does not have recreation programming, has moderate play value, and does not have non-compliant features identified by the 2013 and 2016 ADA assessments.

There are no critical condition amenities within the park, but the general hardscape is in below adequate condition due to cracking in both the concrete and asphalt pavement.

TANGLEWOOD PARK

PARK TYPE

QUADRANT

SIZE (ACRES) 7.8

ADDRESS 5174 Oak Pk Way

PRIORITY OUT OF 50 COMMUNITY PARKS 10

SUMMARY

Tanglewood Park is a 7.8 acre neighborhood park located in the northeast quadrant of Santa Rosa, CA. The park contains a playground, a basketball court, and lengthy walking paths along a riparian habitat.

The overall condition of the park is adequate, with a majority of the amenities being functional and a few being in need of servicing. Tanglewood Park does not have recreation programming, has very high play value, and has a few significantly non-compliant ADA elements.

The critical condition amenity within the park is the basketball court, which has major cracking, uneven pavement, faded striping, and severe weed growth within the surfacing.

OPEN SPACES

OPEN SPACES

Twelve open spaces that are owned and maintained by the City were evaluated as part of this report. This section evaluates the priority ranking of each open space based on condition, recreation programming, play value, and accessibility. In addition, the approximate lifespan and the estimated replacement cost is provided for each amenity as well as the overall park. Parks with a priority ranking closer to one (1) are identified as having a higher priority for new improvements, while parks that rank closer to five (5) have a lower priority for improvement needs. The table below identifies the open spaces in order of priority ranking, the parks identified in gray were not assessed by this Report.

PRIORITY OUT OF 3 SPECIAL PURPOSE PARKS

SUMMARY

Luther Burbank Home and Gardens is a 1.6 acre special purpose park that is registered as a National, State, City, and Horticultural Historic Landmark. The gardens are located in the northeast quadrant of Santa Rosa, CA. The park contains ornamental landscapes, garden beds, and a water feature. The park also includes a restaurant and event building that were assessed within the Facilities Condition Assessment (2018). Luther Burbank Home and Gardens is maintained and operated by the namesake nonprofit organization.

The overall condition of the park is adequate, and a majority of the amenities are fully functional. Luther Burbank Home and Garden does not have recreation programming managed by the Recreation and Parks Department, has moderate play value, and has a few significantly non-compliant ADA features.

The park does not have critical condition items, though the brick paver pathways have areas with uneven surfaces.

ADDRESS

0 Brush Creek Rd

PRIORITY OUT OF **5 TRAIL PARKS**

SUMMARY

Upper Brush Creek Trail Park is a 11.7 acre trail park located in the northeast quadrant of Santa Rosa, CA. The park contains natural landscape and packed earth trails.

The overall condition of the park is adequate. Upper Brush Creek Trail Park does not have recreation programming, has moderate play value, and does not have non-compliant features identified by the 2013 and 2016 ADA assessments.

The critical condition amenity within the park is the trail due to a number of holes throughout the park, a lack of signage, and the informal bike jumps created near Wild Lilac Lane.

RANKING MATRIX - UPPER BRUSH CREEK TRAIL PARK

	Priority Ranking Categories				Supplemental Categories		
Amenities	Condition	Recreation Programming	Play Value	Accessibility	Lifespan	Cost Estimate	
	3.2	5.0	4.0	3.2	16.5	\$ 3,053,911	
General Landscape	4.0	5.0	5.0	-	18.8	\$ 1,651,762

ROADWAY LANDSCAPES

ROADWAY LANDSCAPES

Fifty-six roadway landscapes that are owned and maintained by the Recreation and Parks Department were evaluated as part of this report. This section evaluates the priority ranking of each roadway based on condition. In additional, the approximate lifespan and the estimated replacement cost is provided for each amenity as well as the overall roadway landscapes. Roadway landscapes with a priority ranking closer to one (1) are identified as having a higher priority for new improvements, while roadway landscapes that rank closer to five (5) have a lower priority for improvement needs. The table below identifies the roadway landscapes in order of priority ranking.

Road	Roadway Landscapes - Ranked by Priority Ranking					
Rank	Roadway Landscape	Priority ranking	Lifespan		Estimated Replacement Cost	
1	100020NW	1.0	0.0	\$	12,765

ANALYSIS

The information generated in the park ranking chapter can be organized in various ways to analyze the needs throughout the park system. The Analysis Chapter considers various park characteristics to analyze park priority rankings through different lenses. Some examples of what this chapter identifies, includes high priority parks that are related or differentiated by quadrant, park type, City Council District, or replacement cost.

CITYWIDE ANALYSIS

The citywide analysis takes into account all 85 parks that were assessed as part of this report. The parks are organized based on priority ranking, starting with the highest priority rank to the lowest, where a rank of 1 is the park in need of the most improvements and has the highest priority ranking, while a rank of 85 is the park that needs little to no improvements and is the lowest priority ranked park. Figure 19 identifies the location of the ten highest priority parks within the City's park system. Observations made based on this analysis include, none of the ten highest priority parks fall within the southwest quadrant, and the most frequent park type that occurs within the ten highest priority parks is community park, which pertains to four of the parks.

0	All Parks - Ranked by Priority Ranking

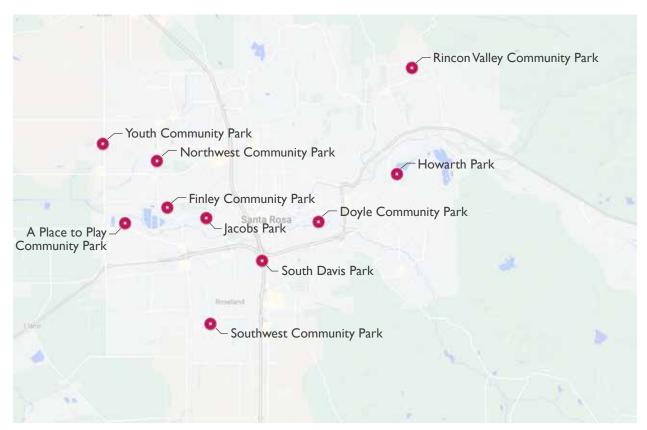

Figure 19: Citywide Analysis Map

COST ANALYSIS

The cost estimate analysis identifies the five highest and five lowest cost parks for a full park replacement. The five highest cost parks range between \$30 million to \$90 million for replacement costs. The five lowest cost parks range between \$50,000 to \$260,000. Figure 21 identifies the location of the five highest cost parks, and five lowest cost parks.

Hi	ghest and Lowest Cost for Full Park Replace	ment									
Rank	Park	Priority Ranking	Lifespan	Area (Acres)		Estimated Replacement Cost	Quadrant	Park Type			
•	5 Highest Cost for Full Park Replacement										
1	Howarth Community Park	2.6	14.2	137.8	\$	86,874,681	SE	CP			
2	Bennett Valley Golf Course	2.9	14.2	153.0	\$	85,194,416	SE	SP			
3	A Place to Play Community Park	2.7	14.1	77.2	\$	51,368,135	NW	CP

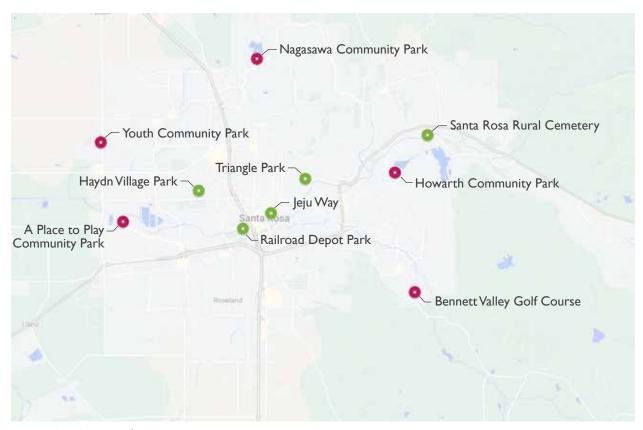

Figure 21: Cost Analysis Map

QUADRANT ANALYSIS

The quadrant analysis identifies the three highest priority and three lowest priority parks within each of the four quadrants within the City, which include northwest, northeast, southwest, and southeast. The three highest priority and three lowest priority parks are relatively comparable in ranking across the four quadrants. Figure 22 and 23 identify the location of the highest priority parks within each quadrant, and Figure 24 and 25 identify the location of the lowest priority parks, regardless of park type.

Hi	ghest Priority Ranked Parks in Each Quadran	nt

CITY COUNCIL DISTRICT ANALYSIS

The City Council District analysis identifies the highest priority park within each of the seven City Council Districts across the City. The City Council Districts are based off the 2010 Census. The City is anticipating an update to the Council District boundaries based upon the 2020 Census. Figure 27 identifies the location of each park.
