Re: 1900 Brush Creek Road
Building Permit B20-6871
Lichau, Amber and Daniel
Hearing Date: February 25, 2021
Our File No.: 43501A

Dear Chair Cisco and Commissioners:

This firm represents Amber and Daniel Lichau in this matter. We would like to take this opportunity to inform the Commission on the background on the original construction of the addition of the residence at issue and removal of the tree, and emphasize the soundness of the Director's decision and reasoning and staff's recommendation.

Background

In July 2019, the Lichau's purchased their property at 1900 Brush Creek Road, Santa Rosa. The property is one-half acre and was developed with a 1,836 square foot residence and detached garage when they purchased it. It is part of a three-lot subdivision established by final Parcel Map No. 609 recorded on June 11, 2002 (the "final map"), a copy of which is attached as Exhibit A. This young family, consisting of Amber and Daniel, both first responders (Amber is a nurse and Daniel is a Napa Deputy Sherriff), and their two small children, purchased their dream property and wished to add on to the existing residence to accommodate their family.

The Lichaus diligently hired consultants, including Ivan Rezvoy, and Mike Robertson, Robertson Engineering, Inc., to assist them with the process and assure compliance with city codes and procedures. In 2019, Mr. Rezvoy prepared a Site Plan depicting the 360 square foot (12'x30') master bath and bedroom addition to the north side of the home adjacent to a shared driveway easement. (Exhibit B) Also in October 2019, Mr. Rezvoy had a phone conversation with City Assistant Engineer Jesus McKeag and followed up with an email dated October 8, 2019, explaining that the building envelope shown on Sheet 4 of the final map (Exhibit A) does not define the distance of its northern boundary from the property line and Final Subdivision Report of June 21, 2000 does not mention this boundary at all. Sheet 4 is "for informational purposes only, describing conditions as of filing and is not intended to affect recording interest." (Note # 1, Exhibit A)

In a response email dated October 9, 2019, Mr. McKeag wrote "[b]ased on the [final] Map and Site Plan I don't see that the Engineering division would object to the addition proposed. I am also addressing Monet who is our Counter Planner. Building setback lines are the purview of the Planning Division." In an email dated October 15, 2019, City Planner Monet Sheikhali responded that: "Planning has reviewed your request and it has been determined that the new addition needs to comply with the required setbacks for R-1-15-SR zoning district per Section 20-22.050. No need to apply the setbacks [aka building envelope] being shown on the supplemental sheet" of the final map. (A copy of this email thread is attached as Exhibit C.)

Due to misinformation given the Lichaus, who had no prior experience with building a home or addition, seeking permits, or a governmental land use authority, they proceeded with construction of the addition, which also required the removal of a redwood tree, without seeking a building permit from the City. The Lichaus were told by a neighbor who presented as knowledgeable that they did not need a permit up front, that the City is very busy, and that they could build the addition according to code and obtain the permit afterwards. The Lichaus had no reason to believe otherwise, and fully intended on seeking the permit post-construction.

Once the addition was nearly completed an individual submitted a complaint to code enforcement regarding the construction of the addition. A photo of the residence with the addition is attached as Exhibit D. The view is from the corner of Brush Creek Road and the driveway easement looking east. The addition starts approximately three (3) feet to the left of the light that is mounted next to the window and ends before the fence, thus seamlessly connecting to the original house.

In a letter to the City dated October 15, 2020, Mr. Robertson wrote, "'[p]er Monet's October 15, 2020 [sic – 2019] email: …addition needs to comply with the

required setbacks for R-1-15-SR Zoning District per Section 20-22.050. No need to apply the setbacks being shown on the Supplemental Sheet.' [¶] …, we have concluded that, in our professional opinion, and based upon our research that the addition meets City requirements." (Exhibit E)

The City agreed and in an email dated December 7, 2020, Jesse Oswald advised the Lichaus that the addition complies with all applicable Zoning Code regulations and, "to facilitate application for the legalization of the addition," planning staff determined the unpermitted addition can be permitted and the building setback lines (aka building envelope) placed on Sheet 4 of the final map are not enforceable. Mr. Oswald advised the Lichaus they were required to submit plans and specifications adhering to the "As-Built" process, pay additional fees due to the work without a permit, and pay a Stop Work Order Removal Fee. (Exhibit F)

Mr. Oswald further stated that planning staff determined that the tree that was removed would have been approved for removal in accordance with the Tree Ordinance and the Lichaus would be required to mitigate the loss of the tree either by planting 26 Coast Redwood trees, each a minimum of 15-gallon container size or, if the site cannot accommodate the replacement trees, the trees would be planted on public property or the City may accept an in-lieu payment of $2,600 which payment would be used for tree-related educational projects and/or City planting programs.

The Lichaus were and are fully cooperative with all of these directives and, on December 8, 2020, submitted their extensive permit application including a site plan showing the addition within the setbacks required by city code.

On December 14, 2020, Kathleen Parnell filed an appeal of decision of the Planning and Economic Development Department's decision ostensibly made on December 4, 2020. There was no decision on December 4, 2020; presumably Ms. Parnell is referring to Mr. Oswald's December 7, 2020 email.

The grounds for appeal are framed as follows:

1. Per CBO (J. Oswald), the unpermitted home addition on frontage Scenic Brush Creek Rd is now able to be permitted because "building setback lines placed on the Final Map Supplemental sheet are not enforceable." I disagree. This is a zoning code violation, whereby a property set-back (building envelope) is being voided to enable an illegal build.

2. A redwood heritage tree was removed on frontage Brush Creek in a scenic set-back and outside a building envelope to enable illegal build. Per CBO, this "would have been approved for removal in-accordance [sic] with the Tree Ordinance." I disagree.

3. (No. 1 on second page) Zoning code violation – Home addition of 12'x30' with 9'x30' through a building envelope. Per CBO (J. Oswald), the building envelope was removed by the City to enable the legalization of the unpermitted build and removal of a heritage tree.

Statement

In the first instance, the addition is not on the frontage of Brush Creek Road (# 1 above) and, thus, the redwood tree was not removed on the road frontage (# 2 above). The addition fronts the driveway easement on the north side of the Lichaus' property. Brush Creek Road lies on the west side of the property. Ms. Parnell's lot is on the east side of the Lichaus so that the Lichaus' lot is in between Ms. Parnell's and Brush Creek Road.

Second, the building envelope depicted on Sheet 4 of the final map was not "removed by the City" to allow permitting of the addition and removal of the tree. Sheet 4 is "for informational purposes only, describing conditions as of filing and is not intended to affect recording interest." (Note # 1) The Subdivision Map Act states that a city may

> (a)… by ordinance, require additional information to be filed or recorded simultaneously with a final or parcel map. The *additional information shall be in the form of* a separate document or *an additional map sheet* which shall indicate its relationship to the final or parcel map, *and shall contain a statement that the additional information is for informational purposes,* describing conditions as of the date of filing, and is not intended to affect record title interest. The document or additional map sheet may also contain a notation that the *additional information is derived from public records or reports, and does not imply the correctness or sufficiency of those records or reports* by the preparer of the document or additional map sheet.
>
> (b) *Additional survey and map information may include, but need not be limited to: building setback lines*, flood hazard zones, seismic lines and setbacks, geologic mapping, and archaeological sites.

(Gov. Code § 66434.2, emphasis supplied) City Code section 19-32.150 provides:

> Additional information, as set forth in this section, shall be required to be submitted on an additional map sheet which shall be identified as the information sheet and which shall indicate its relationship to the parcel map, and shall contain a statement that *the additional information is for informational purposes*, describing conditions as of the date of filing, and is not intended to affect record title interest.

[Emphasis supplied]

City Code section 20-22.050, on the other hand, sets forth the required setbacks for the R-1-15-SR Zoning District, and section 20-28.050 establishes the scenic road setbacks. The addition complies with all required setbacks.

The Lichaus are in agreement with and support the City's determination that the addition can be permitted and the loss of the tree mitigated. The Lichaus are prepared to move forward with finalizing the construction of their family home and respectfully request this Commission deny the appeal in its entirety.

Thank you for your considered attention to this matter.

Sincerely,

Rose M. Zoia

CITY ENGINEER'S CERTIFICATE

I, Anthony A. Cabrera, City Engineer, in and for the City of Santa Rosa, State of California, have examined the map of this subdivision and found it to substantially conform to the tentative map approved June 21, 2000, and any approved alterations thereof, The applicable conditions of approval of the Tentative Map, the State Subdivision Map Act and and the applicable provisions of Title 19 of the Santa Rosa City Code and am satisfied that the map is technically correct. I hereby approve the subdivision shown upon this map and accept, subject to improvement, for public use the public utility easement, public sewer easement, and relinquishment of vehicular access rights, as shown on said map, within said subdivision, including all public facilities as shown on City Engineer drawing number 2002-30.

Dated 5/30, 2002

NOTES:

1) THIS SHEET IS FOR INFORMATION PURPOSES ONLY, DESCRIBING CONDITIONS AS OF FILING AND IS NOT INTENDED TO AFFECT RECORDING INTEREST.

2) DEMAND FEES, METER INSTALLATION FEES AND PROCESSING FEES REQUIRED BY THE CITY MUST BE PAID BY THE APPLICANT PRIOR TO ISSUANCE OF A BUILDING PERMIT.

3) THIS INFORMATION IS DERIVED RECORDS AND REPORTS AND DOES NOT IMPLY THE CORRECTNESS OF SUFFICIENCY OF THESE RECORDS BY THE PREPARER OF THIS DOCUMENT.

4) THIS PROJECT IS SUBJECT TO THE LATEST ADOPTED ORDINANCES, RESOLUTIONS, POLICES AND FEES, INCLUDING BUT NOT LIMITED TO SCHOOL IMPACT FEES, AND TRAFFIC SIGNAL PARTICIPATION FEES ADOPTED BY THE CITY COUNCIL AT THE TIME OF THE BUILDING PERMIT REVIEW AND APPROVAL.

5) A PUBLIC EASEMENT SHALL BE PROVIDED FOR PUBLIC UTILITY MAINS OUTSIDE OF THE PUBLIC RIGHT OF WAY. THE WIDTH OF THE EASEMENT SHALL BE EQUAL TO TWICE THE DEPTH OF THE MAIN OR 15 FEET WIDE FOR A SINGLE UTILITY AND 20 FEET FOR MULTIPLE UTILITIES, WHICHEVER IS GREATER, AND SHALL BE CENTERED OVER THE FACILITY. THE EASEMENT SHALL BE CONFIGURED TO INCLUDE ALL PUBLICLY MAINTAINED APPURTENANCES AND STRUCTURES. NO SURFACE STRUCTURE INCLUDING BUT NOT LIMITED TO ROOF EAVES, DECKS OR POOLS MAY ENCROACH INTO THE EASEMENT. FOOTING AND FOUNDATIONS MAY ENCROACH INTO THE ONE TO ONE LINE FROM THE PIPE DEPTH TO THE TOP OF GRADE IF APPROVED IN WRITING BY THE CHIEF BUILDING OFFICIAL AND THE DIRECTOR OF UTILITIES.

6) REDUCTION IN THE EASEMENT WIDTH MAY BE ALLOWED WITH WRITTEN APPROVAL BY THE DIRECTOR OF THE UTILITIES DEPARTMENT. TREES MAY NOT BE PLANTED WITHIN 10' OF A PUBLIC SEWER MAIN. THE CITY UTILITIES DEPARTMENT WILL NOT BE RESPONSIBLE FOR REPAIRS OR REPLACEMENT OF LANDSCAPING IN PUBLIC SEWER MAIN EASEMENTS.

7) THE STATIC WATER PRESSURE FOR THIS PROJECT IS APPROXIMATELY 80-90 PSI. INDIVIDUAL PRESSURE REGULATORS ARE REQUIRED ON ALL LOTS.

8) LOTS 1, 2 AND 3 ARE SUBJECT TO A JOINT MAINTENANCE AND ACCESS DECLARATION TO BE RECORDED CONCURRENTLY WITH THE MAP.

SCENIC BUILDING SETBACK NOTE:

FRONT SETBACKS FOR ONE STORY STRUCTURE SHALL BE 50 FEET FROM EDGE OF BRUSH CREEK ROAD PAVEMENT AND 100 FEET FOR TWO STORY PORTION OF THE STRUCTURE.

Ivan,

Planning has reviewed your request and it has been determined that the new addition needs to comply with the required setbacks for R-1-15-SR zoning district per Section 20-22.050. No need to apply the setbacks being shown on the supplemental sheet.

Let me know if you have any further questions,

Mr. Rezvoy,

Sorry for the delay in my response. Based on the Map and Site Plan I don't see that the Engineering division would object to the addition proposed. I am also addressing Monet who is our Counter Planner. Building setback lines are the purview of the Planning Division.

Monet,

Can you look at Mr. Rezvoy's Site Plan and comment?

Subject: [EXTERNAL] Setbacks at 1900 BRUSH CREEK RD, SANTA ROSA, 95404

Hello, Mr. McKeag

This is to follow up on my phone call regarding the setbacks as they are shown on the Final Map for the property at 1900 Brush Creek Rd. AP# 182-140-056
The final map (see link below) shows the private road and utility easement of 30' from the northern property line of the parcel 182-140-056. This setback allows for 10'x29' footprint addition to the northern side of the existing house (see attached Site Plan).
The building envelope, established with the recordation of the final map (see sheet 4 of the Final Map) does not define the distance of its northern boundary from the property line. Final Subdivision Report of June 21, 2000 does not mention this boundary at all. Please advise whether we can proceed with planned improvements as they are shown on the Site Plan, or should we apply for the modification of the building envelopes designated on the parcel .

Here is the link for Final
Map: http://imaps.srcity.org/img/PW_Docs/PDF_Combined/2002-0071.pdf
The property is zoned R-1-15-SR (Single Family Residential- Scenic Road).

Sincerely,

Ivan Rezvoy,
415 279 9055

Subject: RE: 1900 Brush Creek Submittal Requirements

Good afternoon,

Zoning Code Section 20-62.030(E)(4) only requires a public hearing of an Appeal if (1) A public hearing was required before making the decision appealed from; or (2) The review authority deems a public hearing desirable. The subject of the Appeal application (attached) is the Planning Director's determination following Planning Review of Building Permit B20-6871 for which no public hearing was held. Therefore, the appeal will move forward to Planning Commission as a report item, as opposed to a public hearing, and **a Public Hearing fee is not required**.

Planning staff are working to gather information and prepare required materials for review by the Planning Commission. The next regularly scheduled meeting of the Planning Commission is January 14, 2021. Planning staff is attempting to meet the necessary deadline to have this item included on the January 14, 2020 agenda. Prior to adding this item to the agenda, Planning staff will confirm availability for the meeting with both the property owner and appellant.

Best,

Andrew

Subject: FW: 1900 Brush Creek Submittal Requirements

Good morning,

On December 7, 2020, Chief Building Official Jesse Oswald notified you that following Planning Review of Building Permit application B20-6871, the Planning Director determined that (1) the unpermitted addition complies with all applicable Zoning Code regulations, and (2) the unpermitted removal of a Heritage Tree can be approved, subject to required mitigation.

On December 14, 2020, the Planning & Economic Development Department received an Appeal Application from the property owner at 1888 Brush Creek Rd. appealing the Planning Director's determination. The review authority for this Appeal Application, which will be processed in accordance with Zoning Code Section 20-62.030, is the Planning Commission. In order for the appeal to proceed as required by §20-62.030, the Building Permit B20-6871 applicant/property owner must pay a Planning Commission Public Hearing fee of $2,362.00.

If you choose to pay the Planning Commission Public Hearing fee, please contact Interim Building Permit Manager Jill Garibaldi at jgaribaldi@srcity.org to make payment. If you would like to discuss the Appeal Application and its processing in greater detail, please contact me to schedule a meeting.

Thank you,

Andrew

Andrew Trippel | Acting Supervising Planner – Current Planning

To: daniel_lichau@yahoo.com
Cc: Tony <tony@cabreraassoc.com>; Maystrovich, Mark <MMaystrovich@srcity.org>
Subject: 1900 Brush Creek Submittal Requirements

Good morning,

To facilitate application for the legalization of the addition, please see the analysis below:

1. Through Planning staff's research and analysis shows the unpermitted addition can be permitted. The building setback lines placed on the Final Map Supplemental sheet(s) are not enforceable.

2. The applicant will be required to submit plans and specifications adhering to the attached "As-Built" process: https://www.srcity.org/DocumentCenter/View/2199/-Handout-for-As-Built-Projects-PDF . The applicant will be required to pay additional fees due to the work without a permit. The fee shall be equal to the permit fee as described on the bottom of page 28 of the fee schedule: https://srcity.org/DocumentCenter/View/16129/Planning--Economic-Development-Department-Fee-Schedule?bidId= . They will also be required to pay the Stop Work Order Removal Fee identified on page 43 (near the middle of the page) "Removal of Stop Work Order".

3. Planning staff have determined that had the applicant applied: The tree that was removed without authorization would have been approved for removal in-accordance with the Tree Ordinance. In accordance with Subsection 17-24.050(C)(1), for each six inches or fraction thereof of the diameter of a tree

which was approved for removal, two trees of the same genus and species as the removed tree (or another species, if approved by the Director), each of a minimum 15-gallon container size, shall be planted on the project site, provided however, that an increased number of smaller size trees of the same genus and species may be planted if approved by the Director, or a fewer number of such trees of a larger size if approved by the Director. Mr. Robertson's letter reports that the total diameter of the removed tree is 74 inches (48+26). Under this criteria, the mitigation requirement is planting of 26 Coast Redwood trees, each a minimum of 15-gallon container size (74 / 6 = 12.33 6-inch increments, which rounds up to 13 sections). In accordance with Subsection 17-24.050(C)(3), If the development site is inadequate in size to accommodate the replacement trees, the trees shall be planted on public property with the approval of the Director of the City's Recreation and Parks Department. Upon the request of the developer and the approval of the Director, the City may accept an in-lieu payment of $100.00 per 15-gallon replacement tree on condition that all such payments shall be used for tree-related educational projects and/or planting programs of the City. The total payment in-lieu fee would be $2,600.

4. The additional complaint for bright lights shining on adjacent properties will be required to be addressed with the building permit submittal.

Steps:

1. Prepared a compete submittal utilizing any and all necessary documents sent to you here – following the "as-built" process: https://www.srcity.org/DocumentCenter/View/2199/-Handout-for-As-Built-Projects-PDF and the addition/alteration guidance: https://www.srcity.org/DocumentCenter/View/18246/Construction-Documents-Submittal-Requirements-for-Remodel-and-or-Additions-to-Residential-Projects (since electronic submittals are required – disregard the # of plan sets required).
2. Complete and submit a building permit application: https://www.srcity.org/DocumentCenter/View/2614/Building-Permit-Application-PDF
3. Address the additional lights installed that potentially shine on any neighboring properties
4. Include this email in the submittal
5. Submit to" permitsubmittal@srcity.org If submittals exceed 15mB – provide a drop box or file transfer mechanism.

Regards,

That would be about right I think. Mike Robertson will look over my drawings and help me submit if he doesn't leave on vacation. My backup is Ivan who works for Tom Lynch, who also advised he would help me out.

Thank you for your time.

Dan

Hi there.

So I had Mike Robertson help me with drawing up my plans and measuring setbacks.
The only thing holding me up is I'm waiting for my T-24 report to come in. I'm hoping to turn it all in early next week.

Thank you for your time.

Please comply with all social distancing and hygiene protocols posted near the front door while at the City hall Complex.
Please schedule an appointment before arriving to help maintain social distancing. Instructions are below.

How to Schedule an Appointment:
•Our appointment queuing system (Qless) has a free App that can be downloaded to your mobile device from Google Play or the Apple Store. Once installed, follow the prompts for access and scheduling your City of Santa Rosa Counter Appointment.
•To access Qless via the internet (URL), go to: SRCity.org/QLess and follow the system prompts to schedule your City of Santa Rosa Counter Appointment.
•Telephone option - For staff assistance in scheduling an appointment, please leave a voicemail at our appointment request line at (707) 543-4623. Leave contact information so we can advise you of the date/time.

The City has launched a virtual permit counter and is accepting and processing all application types, permits can be submitted online at:
https://srcity.org/3280/Permitting-Inspections-Entitlements

Should you have any questions do not hesitate to contact me,

Cassidy Anderson | Code Enforcement Officer
Planning and Economic Development | 100 Santa Rosa Ave. Rm 3 | Santa Rosa, CA 95404
Tel. (707) 543-3229 | Fax (707) 543-3218 | cganderson@srcity.org

The City has launched a virtual permit counter and is accepting and processing all application types, permits can be submitted online at:
https://srcity.org/3280/Permitting-Inspections-Entitlements

The City Building Department has received a large volume of applications since opening a virtual
counter, with limited resources. Staff will contact you directly with next steps in the process.
To check the status of your project go online to:
https://citizen.srcity.org/CitizenAccess/Default.aspx

Hi sir.

My friends father, Mike Robertson, is helping me with the steps I need to take for the permit process. I've started on the drawings and I'm printing out all the photos I have on 8X10s.
PJC is coming out tomorrow to X-ray the foundation. The hole is dug and ready for them.

I'm going to keep at it and knock out as much as I can. I was wondering if I am under any specific timeline that I need to have things completed by?

Thank you for your time sir.

---

Hi all,

I hope this email finds you all well. My name is Amber Lichau, I am Daniel Lichau's wife. He's been feverishly working on getting all of the necessary documents for the permit application for our addition but has unfortunately been working 16 hour days at the Sheriff's office without a break for the past two weeks due the wildfires. He asked me to get the documents sent off to you all and mentioned you all are likely inundated as well. I went through all of the documents and then tried to navigate the SR city's website and noted that if the permit required plans then we are to submit them via email rather than submitting them on the website. I have renamed all the documents as specified but also included titles for each one in the heading. We thank you in advance for your consideration, time, and for all of your help and hope that this is all correct. Please let me know if there is anything else that I can do or need to submit and I will get it done ASAP.

Sincerely,
Amber Lichau

CITY ENGINEER'S CERTIFICATE

I, Anthony A. Cabrera, City Engineer, in and for the City of Santa Rosa, State of California, have examined the map of this subdivision and found it to substantially conform to the tentative map approved June 21, 2000, and any approved alterations thereof. The applicable conditions of approval of the Tentative Map, the State Subdivision Map Act and and the applicable provisions of Title 19 of the Santa Rosa City Code and am satisfied that the map is technically correct. I hereby approve the subdivision shown upon this map and accept, subject to improvement, for public use the public utility easement, public sewer easement, and relinquishment of vehicular access rights, as shown on said map, within said subdivision, including all public facilities as shown on City Engineer drawing number 2002-30.

Dated 5/30, 2002

Anthony A. Cabrera

Anthony A. Cabrera, P.L.S. 7332
City Engineer, City of Santa Rosa
State of California
Expires 12-31-2005

SURVEYOR'S STATEMENT

This map was prepared by me or under my direction and is based upon a field survey in conformance with the requirements of the Subdivision Map Act and local ordinance at the request of Michael G. Dehnert in July, 2000.
I hereby state that this parcel map substantially conforms to the approved or conditionally approved tentative map, if any, and monuments shown hereon will be set within one year from the date of filing of this map and said monuments are or will be sufficient to enable the survey to be retraced.

MIKE BUTI — Licensed Land Surveyor — LS 5092

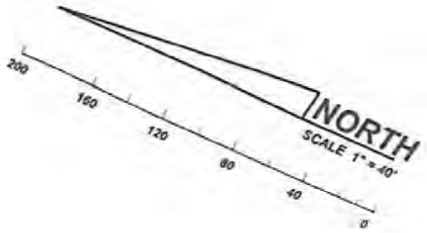
AP NO. 182-140-053 TENTATIVE MAP FILE NO. MIN 99-006

CITY OF SANTA ROSA FILE No. 2002 - 71



SCENIC BUILDING SETBACK NOTE:
FRONT SETBACKS FOR ONE STORY STRUCTURE SHALL BE 50 FEET FROM EDGE OF BRUSH CREEK ROAD PAVEMENT AND 100 FEET FOR TWO STORY PORTION OF THE STRUCTURE

NOTES:

1) THIS SHEET IS FOR INFORMATION PURPOSES ONLY, DESCRIBING CONDITIONS AS OF FILING AND IS NOT INTENDED TO AFFECT RECORDING INTEREST.

2) DEMAND FEES, METER INSTALLATION FEES AND PROCESSING FEES REQUIRED BY THE CITY MUST BE PAID BY THE APPLICANT PRIOR TO ISSUANCE OF A BUILDING PERMIT.

3) THIS INFORMATION IS DERIVED RECORDS AND REPORTS AND DOES NOT IMPLY THE CORRECTNESS OF SUFFICIENCY OF THESE RECORDS BY THE PREPARER OF THIS DOCUMENT.

4) THIS PROJECT IS SUBJECT TO THE LATEST ADOPTED ORDINANCES, RESOLUTIONS, POLICES AND FEES, INCLUDING BUT NOT LIMITED TO SCHOOL IMPACT FEES, AND TRAFFIC SIGNAL PARTICIPATION FEES ADOPTED BY THE CITY COUNCIL AT THE TIME OF THE BUILDING PERMIT REVIEW AND APPROVAL.

5) A PUBLIC EASEMENT SHALL BE PROVIDED FOR PUBLIC UTILITY MAINS OUTSIDE OF THE PUBLIC RIGHT OF WAY. THE WIDTH OF THE EASEMENT SHALL BE EQUAL TO TWICE THE DEPTH OF THE MAIN OR 15 FEET WIDE FOR A SINGLE UTILITY AND 20 FEET FOR MULTIPLE UTILITIES, WHICHEVER IS GREATER, AND SHALL BE CENTERED OVER THE FACILITY. THE EASEMENT SHALL BE CONFIGURED TO INCLUDE ALL PUBLICLY MAINTAINED APPURTENANCES AND STRUCTURES. NO SURFACE STRUCTURE INCLUDING BUT NOT LIMITED TO ROOF EAVES, DECKS OR POOLS MAY ENCROACH INTO THE EASEMENT. FOOTING AND FOUNDATIONS MAY ENCROACH INTO THE ONE TO ONE LINE FROM THE PIPE DEPTH TO THE TOP OF GRADE IF APPROVED IN WRITING BY THE CHIEF BUILDING OFFICIAL AND THE DIRECTOR OF UTILITIES.

6) REDUCTION IN THE EASEMENT WIDTH MAY BE ALLOWED WITH WRITTEN APPROVAL BY THE DIRECTOR OF THE UTILITIES DEPARTMENT. TREES MAY NOT BE PLANTED WITHIN 10' OF A PUBLIC SEWER MAIN. THE CITY UTILITIES DEPARTMENT WILL NOT BE RESPONSIBLE FOR REPAIRS OR REPLACEMENT OF LANDSCAPING IN PUBLIC SEWER MAIN EASEMENTS.

7) THE STATIC WATER PRESSURE FOR THIS PROJECT IS APPROXIMATELY 80-90 PSI. INDIVIDUAL PRESSURE REGULATORS ARE REQUIRED ON ALL LOTS.

8) LOTS 1, 2 AND 3 ARE SUBJECT TO A JOINT MAINTENANCE AND ACCESS DECLARATION TO BE RECORDED CONCURRENTLY WITH THE MAP.

DANIEL LICHAU
1900 BRUSH CREEK RD
SANTA ROSA, CA. 95404

RE: OBSERVATION OF FOUNDATION FROM PHOTOS AND PERSONALLY AT 1900 BRUSH CREEK ROAD, SANTA ROSA

Dear Daniel,

This letter confirms my personal site observation of the foundation and footing for your house addition. The footing was infilled a minimum of 24" into the ground, which from the photos you provided appear to be in solid ground. The footing width is a minimum of 36" and appears that below the forms that were set ended with more than 48" in width. It is my professional opinion that the footing size is sufficient to adequately support the structure.

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

1. I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design identified on this Certificate of Compliance.
2. I certify that the energy features and performance specifications identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.
3. The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.

2019 Low-Rise Residential Mandatory Measures Summary

*NOTE: Low-rise residential buildings subject to the Energy Standards must comply with all applicable mandatory measures, regardless of the compliance approach used. Review the respective section for more information. *Exceptions may apply.*
(01/2020)

Building Envelope Measures:	
§ 110.6(a)1:	**Air Leakage.** Manufactured fenestration, exterior doors, and exterior pet doors must limit air leakage to 0.3 CFM per square foot or less when tested per NFRC-400, ASTM E283 or AAMA/WDMA/CSA 101/I.S.2/A440-2011.*
§ 110.6(a)5:	**Labeling.** Fenestration products and exterior doors must have a label meeting the requirements of § 10-111(a).
§ 110.6(b):	**Field fabricated exterior doors and fenestration** products must use U-factors and solar heat gain coefficient (SHGC) values from Tables 110.6-A, 110.6-B, or JA4.5 for exterior doors. They must be caulked and/or weather-stripped.*
§ 110.7:	**Air Leakage.** All joints, penetrations, and other openings in the building envelope that are potential sources of air leakage must be caulked, gasketed, or weather stripped.
§ 110.8(a):	**Insulation Certification by Manufacturers.** Insulation must be certified by the Department of Consumer Affairs, Bureau of Household Goods and Services (BHGS).
§ 110.8(g):	**Insulation Requirements for Heated Slab Floors.** Heated slab floors must be insulated per the requirements of § 110.8(g).
§ 110.8(i):	**Roofing Products Solar Reflectance and Thermal Emittance.** The thermal emittance and aged solar reflectance values of the roofing material must meet the requirements of § 110.8(i) and be labeled per §10-113 when the installation of a cool roof is specified on the CF1R.
§ 110.8(j):	**Radiant Barrier.** When required, radiant barriers must have an emittance of 0.05 or less and be certified to the Department of Consumer Affairs.
§ 150.0(a):	**Ceiling and Rafter Roof Insulation.** Minimum R-22 insulation in wood-frame ceiling; or the weighted average U-factor must not exceed 0.043. Minimum R-19 or weighted average U-factor of 0.054 or less in a rafter roof alteration. Attic access doors must have permanently attached insulation using adhesive or mechanical fasteners. The attic access must be gasketed to prevent air leakage. Insulation must be installed in direct contact with a continuous roof or ceiling which is sealed to limit infiltration and exfiltration as specified in § 110.7, including but not limited to placing insulation either above or below the roof deck or on top of a drywall ceiling.*
§ 150.0(b):	**Loose-fill Insulation.** Loose fill insulation must meet the manufacturer's required density for the labeled R-value.
§ 150.0(c):	**Wall Insulation.** Minimum R-13 insulation in 2x4 inch wood framing wall or have a U-factor of 0.102 or less, or R-20 in 2x6 inch wood framing or have a U-factor of 0.071 or less. Opaque non-framed assemblies must have an overall assembly U-factor not exceeding 0.102. Masonry walls must meet Tables 150.1-A or B.*
§ 150.0(d):	**Raised-floor Insulation.** Minimum R-19 insulation in raised wood framed floor or 0.037 maximum U-factor.*
§ 150.0(f):	**Slab Edge Insulation.** Slab edge insulation must meet all of the following: have a water absorption rate, for the insulation material alone without facings, no greater than 0.3 percent; have a water vapor permeance no greater than 2.0 perm per inch; be protected from physical damage and UV light deterioration; and, when installed as part of a heated slab floor, meet the requirements of § 110.8(g).
§ 150.0(g)1:	**Vapor Retarder.** In climate zones 1 through 16, the earth floor of unvented crawl space must be covered with a Class I or Class II vapor retarder. This requirement also applies to controlled ventilation crawl space for buildings complying with the exception to § 150.0(d).
§ 150.0(g)2:	**Vapor Retarder.** In climate zones 14 and 16, a Class I or Class II vapor retarder must be installed on the conditioned space side of all insulation in all exterior walls, vented attics, and unvented attics with air-permeable insulation.
§ 150.0(q):	**Fenestration Products.** Fenestration, including skylights, separating conditioned space from unconditioned space or outdoors must have a maximum U-factor of 0.58; or the weighted average U-factor of all fenestration must not exceed 0.58.*
Fireplaces, Decorative Gas Appliances, and Gas Log Measures:	
§ 110.5(e)	**Pilot Light.** Continuously burning pilot lights are not allowed for indoor and outdoor fireplaces.
§ 150.0(e)1:	**Closable Doors.** Masonry or factory-built fireplaces must have a closable metal or glass door covering the entire opening of the firebox.
§ 150.0(e)2:	**Combustion Intake.** Masonry or factory-built fireplaces must have a combustion outside air intake, which is at least six square inches in area and is equipped with a readily accessible, operable, and tight-fitting damper or combustion-air control device.*
§ 150.0(e)3:	**Flue Damper.** Masonry or factory-built fireplaces must have a flue damper with a readily accessible control.*
Space Conditioning, Water Heating, and Plumbing System Measures:	
§ 110.0-§ 110.3:	**Certification.** Heating, ventilation and air conditioning (HVAC) equipment, water heaters, showerheads, faucets, and all other regulated appliances must be certified by the manufacturer to the California Energy Commission.*
§ 110.2(a):	**HVAC Efficiency.** Equipment must meet the applicable efficiency requirements in Table 110.2-A through Table 110.2-K.*
§ 110.2(b):	**Controls for Heat Pumps with Supplementary Electric Resistance Heaters.** Heat pumps with supplementary electric resistance heaters must have controls that prevent supplementary heater operation when the heating load can be met by the heat pump alone; and in which the cut-on temperature for compression heating is higher than the cut-on temperature for supplementary heating, and the cut-off temperature for compression heating is higher than the cut-off temperature for supplementary heating.*
§ 110.2(c):	**Thermostats.** All heating or cooling systems not controlled by a central energy management control system (EMCS) must have a setback thermostat.*
§ 110.3(c)4:	**Water Heating Recirculation Loops Serving Multiple Dwelling Units.** Water heating recirculation loops serving multiple dwelling units must meet the air release valve, backflow prevention, pump priming, pump isolation valve, and recirculation loop connection requirements of § 110.3(c)4.
§ 110.3(c)6:	**Isolation Valves.** Instantaneous water heaters with an input rating greater than 6.8 kBtu per hour (2 kW) must have isolation valves with hose bibbs or other fittings on both cold and hot water lines to allow for flushing the water heater when the valves are closed.
§ 110.5:	**Pilot Lights.** Continuously burning pilot lights are prohibited for natural gas: fan-type central furnaces; household cooking appliances (except appliances without an electrical supply voltage connection with pilot lights that consume less than 150 Btu per hour); and pool and spa heaters.*
§ 150.0(h)1:	**Building Cooling and Heating Loads.** Heating and/or cooling loads are calculated in accordance with the ASHRAE Handbook, Equipment Volume, Applications Volume, and Fundamentals Volume; the SMACNA Residential Comfort System Installation Standards Manual; or the ACCA Manual J using design conditions specified in § 150.0(h)2.

§ 150.0(h)3A:	Clearances. Air conditioner and heat pump outdoor condensing units must have a clearance of at least five feet from the outlet of any dryer
§ 150.0(h)3B:	Liquid Line Drier. Air conditioners and heat pump systems must be equipped with liquid line filter driers if required, as specified by the manufacturer's instructions.
§ 150.0(j)1:	Storage Tank Insulation. Unfired hot water tanks, such as storage tanks and backup storage tanks for solar water-heating systems, must have a minimum of R-12 external insulation or R-16 internal insulation where the internal insulation R-value is indicated on the exterior of the tank.
§ 150.0(j)2A:	Water Piping, Solar Water-heating System Piping, and Space Conditioning System Line Insulation. All domestic hot water piping must be insulated as specified in Section 609.11 of the California Plumbing Code. In addition, the following piping conditions must have a minimum insulation wall thickness of one inch or a minimum insulation R-value of 7.7: the first five feet of cold water pipes from the storage tank; all hot water piping with a nominal diameter equal to or greater than 3/4 inch and less than one inch; all hot water piping with a nominal diameter less than 3/4 inch that is: associated with a domestic hot water recirculation system, from the heating source to storage tank or between tanks, buried below grade, and from the heating source to kitchen fixtures.*
§ 150.0(j)3:	Insulation Protection. Piping insulation must be protected from damage, including that due to sunlight, moisture, equipment maintenance, and wind as required by Section 120.3(b). Insulation exposed to weather must be water retardant and protected from UV light (no adhesive tapes). Insulation covering chilled water piping and refrigerant suction piping located outside the conditioned space must include, or be protected by, a Class I or Class II vapor retarder. Pipe insulation buried below grade must be installed in a waterproof and non-crushable casing or sleeve.
§ 150.0(n)1:	Gas or Propane Water Heating Systems. Systems using gas or propane water heaters to serve individual dwelling units must include all of the following: A dedicated 125 volt, 20 amp electrical receptacle connected to the electric panel with a 120/240 volt 3 conductor, 10 AWG copper branch circuit, within three feet of the water heater without obstruction. Both ends of the unused conductor must be labeled with the word "spare" and be electrically isolated. Have a reserved single pole circuit breaker space in the electrical panel adjacent to the circuit breaker for the branch circuit and labeled with the words "Future 240V Use"; a Category III or IV vent, or a Type B vent with straight pipe between the outside termination and the space where the water heater is installed; a condensate drain that is no more than two inches higher than the base of the water heater, and allows natural draining without pump assistance; and a gas supply line with a capacity of at least 200,000 Btu per hour.
§ 150.0(n)2:	Recirculating Loops. Recirculating loops serving multiple dwelling units must meet the requirements of § 110.3(c)5.
§ 150.0(n)3:	Solar Water-heating Systems. Solar water-heating systems and collectors must be certified and rated by the Solar Rating and Certification Corporation (SRCC), the International Association of Plumbing and Mechanical Officials, Research and Testing (IAPMO R&T), or by a listing agency that is approved by the Executive Director.
Ducts and Fans Measures:	
§ 110.8(d)3:	Ducts. Insulation installed on an existing space-conditioning duct must comply with § 604.0 of the California Mechanical Code (CMC). If a contractor installs the insulation, the contractor must certify to the customer, in writing, that the insulation meets this requirement.
§ 150.0(m)1:	CMC Compliance. All air-distribution system ducts and plenums must meet the requirements of the CMC §§ 601.0, 602.0, 603.0, 604.0, 605.0 and ANSI/SMACNA-006-2006 HVAC Duct Construction Standards Metal and Flexible 3rd Edition. Portions of supply-air and return-air ducts and plenums must be insulated to a minimum installed level of R-6.0 or a minimum installed level of R-4.2 when ducts are entirely in conditioned space as confirmed through field verification and diagnostic testing (RA3.1.4.3.8). Portions of the duct system completely exposed and surrounded by directly conditioned space are not required to be insulated. Connections of metal ducts and inner core of flexible ducts must be mechanically fastened. Openings must be sealed with mastic, tape, or other duct-closure system that meets the applicable requirements of UL 181, UL 181A, or UL 181B or aerosol sealant that meets the requirements of UL 723. If mastic or tape is used to seal openings greater than ¼ inch, the combination of mastic and either mesh or tape must be used. Building cavities, support platforms for air handlers, and plenums designed or constructed with materials other than sealed sheet metal, duct board or flexible duct must not be used to convey conditioned air. Building cavities and support platforms may contain ducts. Ducts installed in cavities and support platforms must not be compressed to cause reductions in the cross-sectional area.*
§ 150.0(m)2:	Factory-Fabricated Duct Systems. Factory-fabricated duct systems must comply with applicable requirements for duct construction, connections, and closures; joints and seams of duct systems and their components must not be sealed with cloth back rubber adhesive duct tapes unless such tape is used in combination with mastic and draw bands.
§ 150.0(m)3:	Field-Fabricated Duct Systems. Field-fabricated duct systems must comply with applicable requirements for: pressure-sensitive tapes, mastics, sealants, and other requirements specified for duct construction.
§ 150.0(m)7:	Backdraft Damper. Fan systems that exchange air between the conditioned space and outdoors must have backdraft or automatic dampers.
§ 150.0(m)8:	Gravity Ventilation Dampers. Gravity ventilating systems serving conditioned space must have either automatic or readily accessible, manually operated dampers in all openings to the outside, except combustion inlet and outlet air openings and elevator shaft vents.
§ 150.0(m)9:	Protection of Insulation. Insulation must be protected from damage, sunlight, moisture, equipment maintenance, and wind. Insulation exposed to weather must be suitable for outdoor service. For example, protected by aluminum, sheet metal, painted canvas, or plastic cover. Cellular foam insulation must be protected as above or painted with a coating that is water retardant and provides shielding from solar radiation.
§ 150.0(m)10:	Porous Inner Core Flex Duct. Porous inner core flex ducts must have a non-porous layer between the inner core and outer vapor barrier.
§ 150.0(m)11:	Duct System Sealing and Leakage Test. When space conditioning systems use forced air duct systems to supply conditioned air to an occupiable space, the ducts must be sealed and duct leakage tested, as confirmed through field verification and diagnostic testing, in accordance with § 150.0(m)11 and Reference Residential Appendix RA3.
§ 150.0(m)12:	Air Filtration. Space conditioning systems with ducts exceeding 10 feet and the supply side of ventilation systems must have MERV 13 or equivalent filters. Filters for space conditioning systems must have a two inch depth or can be one inch if sized per Equation 150.0-A. Pressure drops and labeling must meet the requirements in §150.0(m)12. Filters must be accessible for regular service.*
§ 150.0(m)13:	Space Conditioning System Airflow Rate and Fan Efficacy. Space conditioning systems that use ducts to supply cooling must have a hole for the placement of a static pressure probe, or a permanently installed static pressure probe in the supply plenum. Airflow must be ≥ 350 CFM per ton of nominal cooling capacity, and an air-handling unit fan efficacy ≤ 0.45 watts per CFM for gas furnace air handlers and ≤ 0.58 watts per CFM for all others. Small duct high velocity systems must provide an airflow ≥ 250 CFM per ton of nominal cooling capacity, and an air-handling unit fan efficacy ≤ 0.62 watts per CFM. Field verification testing is required in accordance with Reference Residential Appendix RA3.3.*

2019 Low-Rise Residential Mandatory Measures Summary

Requirements for Ventilation and Indoor Air Quality:	
§ 150.0(o)1:	**Requirements for Ventilation and Indoor Air Quality**. All dwelling units must meet the requirements of ASHRAE Standard 62.2, Ventilation and Acceptable Indoor Air Quality in Residential Buildings subject to the amendments specified in § 150.0(o)1.
§ 150.0(o)1C:	**Single Family Detached Dwelling Units**. Single family detached dwelling units, and attached dwelling units not sharing ceilings or floors with other dwelling units, occupiable spaces, public garages, or commercial spaces must have mechanical ventilation airflow provided at rates determined by ASHRAE 62.2 Sections 4.1.1 and 4.1.2 and as specified in § 150.0(o)1C.
§ 150.0(o)1E:	**Multifamily Attached Dwelling Units**. Multifamily attached dwelling units must have mechanical ventilation airflow provided at rates in accordance with Equation 150.0-B and must be either a balanced system or continuous supply or continuous exhaust system. If a balanced system is not used, all units in the building must use the same system type and the dwelling-unit envelope leakage must be ≤ 0.3 CFM at 50 Pa (0.2 inch water) per square foot of dwelling unit envelope surface area and verified in accordance with Reference Residential Appendix RA3.8.
§ 150.0(o)1F:	**Multifamily Building Central Ventilation Systems**. Central ventilation systems that serve multiple dwelling units must be balanced to provide ventilation airflow for each dwelling unit served at a rate equal to or greater than the rate specified by Equation 150.0-B. All unit airflows must be within 20 percent of the unit with the lowest airflow rate as it relates to the individual unit's minimum required airflow rate needed for compliance.
§ 150.0(o)1G:	**Kitchen Range Hoods**. Kitchen range hoods must be rated for sound in accordance with Section 7.2 of ASHRAE 62.2.
§ 150.0(o)2:	**Field Verification and Diagnostic Testing**. Dwelling unit ventilation airflow must be verified in accordance with Reference Residential Appendix RA3.7. A kitchen range hood must be verified in accordance with Reference Residential Appendix RA3.7.4.3 to confirm it is rated by HVI to comply with the airflow rates and sound requirements as specified in Section 5 and 7.2 of ASHRAE 62.2.
Pool and Spa Systems and Equipment Measures:	
§ 110.4(a):	**Certification by Manufacturers**. Any pool or spa heating system or equipment must be certified to have all of the following: a thermal efficiency that complies with the Appliance Efficiency Regulations; an on-off switch mounted outside of the heater that allows shutting off the heater without adjusting the thermostat setting; a permanent weatherproof plate or card with operating instructions; and must not use electric resistance heating.*
§ 110.4(b)1:	**Piping**. Any pool or spa heating system or equipment must be installed with at least 36 inches of pipe between the filter and the heater, or dedicated suction and return lines, or built-in or built-up connections to allow for future solar heating.
§ 110.4(b)2:	**Covers**. Outdoor pools or spas that have a heat pump or gas heater must have a cover.
§ 110.4(b)3:	**Directional Inlets and Time Switches for Pools**. Pools must have directional inlets that adequately mix the pool water, and a time switch that will allow all pumps to be set or programmed to run only during off-peak electric demand periods.
§ 110.5:	**Pilot Light**. Natural gas pool and spa heaters must not have a continuously burning pilot light.
§ 150.0(p):	**Pool Systems and Equipment Installation**. Residential pool systems or equipment must meet the specified requirements for pump sizing, flow rate, piping, filters, and valves.*
Lighting Measures:	
§ 110.9:	**Lighting Controls and Components**. All lighting control devices and systems, ballasts, and luminaires must meet the applicable requirements of § 110.9.*
§ 150.0(k)1A:	**Luminaire Efficacy**. All installed luminaires must meet the requirements in Table 150.0-A.
§ 150.0(k)1B:	**Blank Electrical Boxes**. The number of electrical boxes that are more than five feet above the finished floor and do not contain a luminaire or other device must be no greater than the number of bedrooms. These electrical boxes must be served by a dimmer, vacancy sensor control, or fan speed control.
§ 150.0(k)1C:	**Recessed Downlight Luminaires in Ceilings**. Luminaires recessed into ceilings must meet all of the requirements for: insulation contact (IC) labeling; air leakage; sealing; maintenance; and socket and light source as described in § 150.0(k)1C.
§ 150.0(k)1D:	**Electronic Ballasts for Fluorescent Lamps**. Ballasts for fluorescent lamps rated 13 watts or greater must be electronic and must have an output frequency no less than 20 kHz.
§ 150.0(k)1E:	**Night Lights, Step Lights, and Path Lights**. Night lights, step lights and path lights are not required to comply with Table 150.0-A or be controlled by vacancy sensors provided they are rated to consume no more than 5 watts of power and emit no more than 150 lumens.
§ 150.0(k)1F:	**Lighting Integral to Exhaust Fans**. Lighting integral to exhaust fans (except when installed by the manufacturer in kitchen exhaust hoods) must meet the applicable requirements of § 150.0(k).*
§ 150.0(k)1G:	**Screw based luminaires**. Screw based luminaires must contain lamps that comply with Reference Joint Appendix JA8.*
§ 150.0(k)1H:	**Light Sources in Enclosed or Recessed Luminaires**. Lamps and other separable light sources that are not compliant with the JA8 elevated temperature requirements, including marking requirements, must not be installed in enclosed or recessed luminaires.
§ 150.0(k)1I:	**Light Sources in Drawers, Cabinets, and Linen Closets**. Light sources internal to drawers, cabinetry or linen closets are not required to comply with Table 150.0-A or be controlled by vacancy sensors provided that they are rated to consume no more than 5 watts of power, emit no more than 150 lumens, and are equipped with controls that automatically turn the lighting off when the drawer, cabinet or linen closet is closed.
§ 150.0(k)2A:	**Interior Switches and Controls**. All forward phase cut dimmers used with LED light sources must comply with NEMA SSL 7A.
§ 150.0(k)2B:	**Interior Switches and Controls**. Exhaust fans must be controlled separately from lighting systems.*
§ 150.0(k)2C:	**Interior Switches and Controls**. Lighting must have readily accessible wall-mounted controls that allow the lighting to be manually turned ON and OFF.*
§ 150.0(k)2D:	**Interior Switches and Controls**. Controls and equipment must be installed in accordance with manufacturer's instructions.
§ 150.0(k)2E:	**Interior Switches and Controls**. Controls must not bypass a dimmer, occupant sensor, or vacancy sensor function if the control is installed to comply with § 150.0(k).
§ 150.0(k)2F:	**Interior Switches and Controls**. Lighting controls must comply with the applicable requirements of § 110.9.

§ 150.0(k)2G:	**Interior Switches and Controls.** An energy management control system (EMCS) may be used to comply with control requirements if it: provides functionality of the specified control according to § 110.9; meets the Installation Certificate requirements of § 130.4; meets the EMCS requirements of § 130.0(e); and meets all other requirements in § 150.0(k)2.
§ 150.0(k)2H:	**Interior Switches and Controls.** A multiscene programmable controller may be used to comply with dimmer requirements in § 150.0(k) if it provides the functionality of a dimmer according to § 110.9, and complies with all other applicable requirements in § 150.0(k)2.
§ 150.0(k)2I:	**Interior Switches and Controls.** In bathrooms, garages, laundry rooms, and utility rooms, at least one luminaire in each of these spaces must be controlled by an occupant sensor or a vacancy sensor providing automatic-off functionality. If an occupant sensor is installed, it must be initially configured to manual-on operation using the manual control required under Section 150.0(k)2C.
§ 150.0(k)2J:	**Interior Switches and Controls.** Luminaires that are or contain light sources that meet Reference Joint Appendix JA8 requirements for dimming, and that are not controlled by occupancy or vacancy sensors, must have dimming controls.*
§ 150.0(k)2K:	**Interior Switches and Controls.** Under cabinet lighting must be controlled separately from ceiling-installed lighting systems.
§ 150.0(k)3A:	**Residential Outdoor Lighting.** For single-family residential buildings, outdoor lighting permanently mounted to a residential building, or to other buildings on the same lot, must meet the requirement in item § 150.0(k)3Ai (ON and OFF switch) and the requirements in either § 150.0(k)3Aii (photocell and either a motion sensor or automatic time switch control) or § 150.0(k)3Aiii (astronomical time clock), or an EMCS.
§ 150.0(k)3B:	**Residential Outdoor Lighting.** For low-rise residential buildings with four or more dwelling units, outdoor lighting for private patios, entrances, balconies, and porches; and residential parking lots and carports with less than eight vehicles per site must comply with either § 150.0(k)3A or with the applicable requirements in Sections 110.9, 130.0, 130.2, 130.4, 140.7 and 141.0.
§ 150.0(k)3C:	**Residential Outdoor Lighting.** For low-rise residential buildings with four or more dwelling units, any outdoor lighting for residential parking lots or carports with a total of eight or more vehicles per site and any outdoor lighting not regulated by § 150.0(k)3B or § 150.0(k)3D must comply with the applicable requirements in Sections 110.9, 130.0, 130.2, 130.4, 140.7 and 141.0.
§ 150.0(k)4:	**Internally illuminated address signs.** Internally illuminated address signs must comply with § 140.8; or must consume no more than 5 watts of power as determined according to § 130.0(c).
§ 150.0(k)5:	**Residential Garages for Eight or More Vehicles.** Lighting for residential parking garages for eight or more vehicles must comply with the applicable requirements for nonresidential garages in Sections 110.9, 130.0, 130.1, 130.4, 140.6, and 141.0.
§ 150.0(k)6A:	**Interior Common Areas of Low-rise Multifamily Residential Buildings.** In a low-rise multifamily residential building where the total interior common area in a single building equals 20 percent or less of the floor area, permanently installed lighting for the interior common areas in that building must be comply with Table 150.0-A and be controlled by an occupant sensor.
§ 150.0(k)6B:	**Interior Common Areas of Low-rise Multifamily Residential Buildings.** In a low-rise multifamily residential building where the total interior common area in a single building equals more than 20 percent of the floor area, permanently installed lighting for the interior common areas in that building must: i. Comply with the applicable requirements in Sections 110.9, 130.0, 130.1, 140.6 and 141.0; and ii. Lighting installed in corridors and stairwells must be controlled by occupant sensors that reduce the lighting power in each space by at least 50 percent. The occupant sensors must be capable of turning the light fully on and off from all designed paths of ingress and egress.
Solar Ready Buildings:	
§ 110.10(a)1:	**Single Family Residences.** Single family residences located in subdivisions with 10 or more single family residences and where the application for a tentative subdivision map for the residences has been deemed complete and approved by the enforcement agency, which do not have a photovoltaic system installed, must comply with the requirements of § 110.10(b) through § 110.10(e).
§ 110.10(a)2:	**Low-rise Multifamily Buildings.** Low-rise multi-family buildings that do not have a photovoltaic system installed must comply with the requirements of § 110.10(b) through § 110.10(d).
§ 110.10(b)1:	**Minimum Solar Zone Area.** The solar zone must have a minimum total area as described below. The solar zone must comply with access, pathway, smoke ventilation, and spacing requirements as specified in Title 24, Part 9 or other parts of Title 24 or in any requirements adopted by a local jurisdiction. The solar zone total area must be comprised of areas that have no dimension less than 5 feet and are no less than 80 square feet each for buildings with roof areas less than or equal to 10,000 square feet or no less than 160 square feet each for buildings with roof areas greater than 10,000 square feet. For single family residences, the solar zone must be located on the roof or overhang of the building and have a total area no less than 250 square feet. For low-rise multi-family buildings the solar zone must be located on the roof or overhang of the building, or on the roof or overhang of another structure located within 250 feet of the building, or on covered parking installed with the building project, and have a total area no less than 15 percent of the total roof area of the building excluding any skylight area. The solar zone requirement is applicable to the entire building, including mixed occupancy.*
§ 110.10(b)2:	**Azimuth.** All sections of the solar zone located on steep-sloped roofs must be oriented between 90 degrees and 300 degrees of true north.
§ 110.10(b)3A:	**Shading.** The solar zone must not contain any obstructions, including but not limited to: vents, chimneys, architectural features, and roof mounted equipment.*
§ 110.10(b)3B:	**Shading.** Any obstruction located on the roof or any other part of the building that projects above a solar zone must be located at least twice the distance, measured in the horizontal plane, of the height difference between the highest point of the obstruction and the horizontal projection of the nearest point of the solar zone, measured in the vertical plane.*
§ 110.10(b)4:	**Structural Design Loads on Construction Documents.** For areas of the roof designated as a solar zone, the structural design loads for roof dead load and roof live load must be clearly indicated on the construction documents.
§ 110.10(c):	**Interconnection Pathways.** The construction documents must indicate: a location reserved for inverters and metering equipment and a pathway reserved for routing of conduit from the solar zone to the point of interconnection with the electrical service; and for single family residences and central water-heating systems, a pathway reserved for routing plumbing from the solar zone to the water-heating system.
§ 110.10(d):	**Documentation.** A copy of the construction documents or a comparable document indicating the information from § 110.10(b) through § 110.10(c) must be provided to the occupant.
§ 110.10(e)1:	**Main Electrical Service Panel.** The main electrical service panel must have a minimum busbar rating of 200 amps.
§ 110.10(e)2:	**Main Electrical Service Panel.** The main electrical service panel must have a reserved space to allow for the installation of a double pole circuit breaker for a future solar electric installation. The reserved space must be permanently marked as “For Future Solar Electric”.

HVAC SYSTEM HEATING AND COOLING LOADS SUMMARY

To whom it may concern,

Please see attached permit application and supplemental documentation, including plans, for addition on our home at 1900 Brush Creek Road Santa Rosa. Please email or feel free to call with any questions or further required actions. Thank you for your time and we look forward to hearing from you.

Sincerely,
Amber Lichau

Compliance Energy Total	**93.73**	**92.83**	**0.9**	**1**

REQUIRED SPECIAL FEATURES

The following are features that must be installed as condition for meeting the modeled energy performance for this computer analysis.

- Insulation below roof deck
- New ductwork added is less than 40 ft. in length

HERS FEATURE SUMMARY

The following is a summary of the features that must be field-verified by a certified HERS Rater as a condition for meeting the modeled energy performance for this computer analysis. Additional detail is provided in the buildng tables below. Registered CF2Rs and CF3Rs are required to be completed in the HERS Registry

Building-level Verifications:
- -- None --

Cooling System Verifications:
- -- None --

Heating System Verifications:
- -- None --

HVAC Distribution System Verifications:

DOCUMENTATION AUTHOR'S DECLARATION STATEMENT	
1. I certify that this Certificate of Compliance documentation is accurate and complete.	
Documentation Author Name: MINERVA TOPETE	Documentation Author Signature:
Company: Title 24 Data Corporation	Signature Date: 8/14/2020
Address: 633 MONTEREY TRAIL (P.O. BOX 2199)	CEA/ HERS Certification Identification (If applicable):
City/State/Zip: FRAZIER PARK, CA 93225	Phone: (800) 237-8824

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

1. I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design identified on this Certificate of Compliance.
2. I certify that the energy features and performance specifications identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.
3. The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.

Responsible Designer Name:	Responsible Designer Signature:

2019 Low-Rise Residential Mandatory Measures Summary

*NOTE: Low-rise residential buildings subject to the Energy Standards must comply with all applicable mandatory measures, regardless of the compliance approach used. Review the respective section for more information. *Exceptions may apply.*

(01/2020)

Building Envelope Measures:	
§ 110.6(a)1:	**Air Leakage.** Manufactured fenestration, exterior doors, and exterior pet doors must limit air leakage to 0.3 CFM per square foot or less when tested per NFRC-400, ASTM E283 or AAMA/WDMA/CSA 101/I.S.2/A440-2011.*
§ 110.6(a)5:	**Labeling.** Fenestration products and exterior doors must have a label meeting the requirements of § 10-111(a).
§ 110.6(b):	**Field fabricated exterior doors and fenestration** products must use U-factors and solar heat gain coefficient (SHGC) values from Tables 110.6-A, 110.6-B, or JA4.5 for exterior doors. They must be caulked and/or weather-stripped.*
§ 110.7:	**Air Leakage.** All joints, penetrations, and other openings in the building envelope that are potential sources of air leakage must be caulked, gasketed, or weather stripped.
§ 110.8(a):	**Insulation Certification by Manufacturers.** Insulation must be certified by the Department of Consumer Affairs, Bureau of Household Goods and Services (BHGS).
§ 110.8(g):	**Insulation Requirements for Heated Slab Floors.** Heated slab floors must be insulated per the requirements of § 110.8(g).
§ 110.8(i):	**Roofing Products Solar Reflectance and Thermal Emittance.** The thermal emittance and aged solar reflectance values of the roofing material must meet the requirements of § 110.8(i) and be labeled per §10-113 when the installation of a cool roof is specified on the CF1R.
§ 110.8(j):	**Radiant Barrier.** When required, radiant barriers must have an emittance of 0.05 or less and be certified to the Department of Consumer Affairs.
§ 150.0(a):	**Ceiling and Rafter Roof Insulation.** Minimum R-22 insulation in wood-frame ceiling; or the weighted average U-factor must not exceed 0.043. Minimum R-19 or weighted average U-factor of 0.054 or less in a rafter roof alteration. Attic access doors must have permanently attached insulation using adhesive or mechanical fasteners. The attic access must be gasketed to prevent air leakage. Insulation must be installed in direct contact with a continuous roof or ceiling which is sealed to limit infiltration and exfiltration as specified in § 110.7, including but not limited to placing insulation either above or below the roof deck or on top of a drywall ceiling.*
§ 150.0(b):	**Loose-fill Insulation.** Loose fill insulation must meet the manufacturer's required density for the labeled R-value.
§ 150.0(c):	**Wall Insulation.** Minimum R-13 insulation in 2x4 inch wood framing wall or have a U-factor of 0.102 or less, or R-20 in 2x6 inch wood framing or have a U-factor of 0.071 or less. Opaque non-framed assemblies must have an overall assembly U-factor not exceeding 0.102. Masonry walls must meet Tables 150.1-A or B.*
§ 150.0(d):	**Raised-floor Insulation.** Minimum R-19 insulation in raised wood framed floor or 0.037 maximum U-factor.*
§ 150.0(f):	**Slab Edge Insulation.** Slab edge insulation must meet all of the following: have a water absorption rate, for the insulation material alone without facings, no greater than 0.3 percent; have a water vapor permeance no greater than 2.0 perm per inch; be protected from physical damage and UV light deterioration; and, when installed as part of a heated slab floor, meet the requirements of § 110.8(g).
§ 150.0(g)1:	**Vapor Retarder.** In climate zones 1 through 16, the earth floor of unvented crawl space must be covered with a Class I or Class II vapor retarder. This requirement also applies to controlled ventilation crawl space for buildings complying with the exception to § 150.0(d).
§ 150.0(g)2:	**Vapor Retarder.** In climate zones 14 and 16, a Class I or Class II vapor retarder must be installed on the conditioned space side of all insulation in all exterior walls, vented attics, and unvented attics with air-permeable insulation.
§ 150.0(q):	**Fenestration Products.** Fenestration, including skylights, separating conditioned space from unconditioned space or outdoors must have a maximum U-factor of 0.58; or the weighted average U-factor of all fenestration must not exceed 0.58.*
Fireplaces, Decorative Gas Appliances, and Gas Log Measures:	
§ 110.5(e)	**Pilot Light.** Continuously burning pilot lights are not allowed for indoor and outdoor fireplaces.
§ 150.0(e)1:	**Closable Doors.** Masonry or factory-built fireplaces must have a closable metal or glass door covering the entire opening of the firebox.
§ 150.0(e)2:	**Combustion Intake.** Masonry or factory-built fireplaces must have a combustion outside air intake, which is at least six square inches in area and is equipped with a readily accessible, operable, and tight-fitting damper or combustion-air control device.*
§ 150.0(e)3:	**Flue Damper.** Masonry or factory-built fireplaces must have a flue damper with a readily accessible control.*
Space Conditioning, Water Heating, and Plumbing System Measures:	
§ 110.0-§ 110.3:	**Certification.** Heating, ventilation and air conditioning (HVAC) equipment, water heaters, showerheads, faucets, and all other regulated appliances must be certified by the manufacturer to the California Energy Commission.*
§ 110.2(a):	**HVAC Efficiency.** Equipment must meet the applicable efficiency requirements in Table 110.2-A through Table 110.2-K.*
§ 110.2(b):	**Controls for Heat Pumps with Supplementary Electric Resistance Heaters.** Heat pumps with supplementary electric resistance heaters must have controls that prevent supplementary heater operation when the heating load can be met by the heat pump alone; and in which the cut-on temperature for compression heating is higher than the cut-on temperature for supplementary heating, and the cut-off temperature for compression heating is higher than the cut-off temperature for supplementary heating.*
§ 110.2(c):	**Thermostats.** All heating or cooling systems not controlled by a central energy management control system (EMCS) must have a setback thermostat.*
§ 110.3(c)4:	**Water Heating Recirculation Loops Serving Multiple Dwelling Units.** Water heating recirculation loops serving multiple dwelling units must meet the air release valve, backflow prevention, pump priming, pump isolation valve, and recirculation loop connection requirements of § 110.3(c)4.
§ 110.3(c)6:	**Isolation Valves.** Instantaneous water heaters with an input rating greater than 6.8 kBtu per hour (2 kW) must have isolation valves with hose bibbs or other fittings on both cold and hot water lines to allow for flushing the water heater when the valves are closed.
§ 110.5:	**Pilot Lights.** Continuously burning pilot lights are prohibited for natural gas: fan-type central furnaces; household cooking appliances (except appliances without an electrical supply voltage connection with pilot lights that consume less than 150 Btu per hour); and pool and spa heaters.*
§ 150.0(h)1:	**Building Cooling and Heating Loads.** Heating and/or cooling loads are calculated in accordance with the ASHRAE Handbook, Equipment Volume, Applications Volume, and Fundamentals Volume; the SMACNA Residential Comfort System Installation Standards Manual; or the ACCA Manual J using design conditions specified in § 150.0(h)2.

2019 Low-Rise Residential Mandatory Measures Summary

§ 150.0(h)3A:	**Clearances.** Air conditioner and heat pump outdoor condensing units must have a clearance of at least five feet from the outlet of any dryer
§ 150.0(h)3B:	**Liquid Line Drier.** Air conditioners and heat pump systems must be equipped with liquid line filter driers if required, as specified by the manufacturer's instructions.
§ 150.0(j)1:	**Storage Tank Insulation.** Unfired hot water tanks, such as storage tanks and backup storage tanks for solar water-heating systems, must have a minimum of R-12 external insulation or R-16 internal insulation where the internal insulation R-value is indicated on the exterior of the tank.
§ 150.0(j)2A:	**Water Piping, Solar Water-heating System Piping, and Space Conditioning System Line Insulation.** All domestic hot water piping must be insulated as specified in Section 609.11 of the California Plumbing Code. In addition, the following piping conditions must have a minimum insulation wall thickness of one inch or a minimum insulation R-value of 7.7: the first five feet of cold water pipes from the storage tank; all hot water piping with a nominal diameter equal to or greater than 3/4 inch and less than one inch; all hot water piping with a nominal diameter less than 3/4 inch that is: associated with a domestic hot water recirculation system, from the heating source to storage tank or between tanks, buried below grade, and from the heating source to kitchen fixtures.*
§ 150.0(j)3:	**Insulation Protection.** Piping insulation must be protected from damage, including that due to sunlight, moisture, equipment maintenance, and wind as required by Section 120.3(b). Insulation exposed to weather must be water retardant and protected from UV light (no adhesive tapes). Insulation covering chilled water piping and refrigerant suction piping located outside the conditioned space must include, or be protected by, a Class I or Class II vapor retarder. Pipe insulation buried below grade must be installed in a waterproof and non-crushable casing or sleeve.
§ 150.0(n)1:	**Gas or Propane Water Heating Systems.** Systems using gas or propane water heaters to serve individual dwelling units must include all of the following: A dedicated 125 volt, 20 amp electrical receptacle connected to the electric panel with a 120/240 volt 3 conductor, 10 AWG copper branch circuit, within three feet of the water heater without obstruction. Both ends of the unused conductor must be labeled with the word "spare" and be electrically isolated. Have a reserved single pole circuit breaker space in the electrical panel adjacent to the circuit breaker for the branch circuit and labeled with the words "Future 240V Use"; a Category III or IV vent, or a Type B vent with straight pipe between the outside termination and the space where the water heater is installed; a condensate drain that is no more than two inches higher than the base of the water heater, and allows natural draining without pump assistance; and a gas supply line with a capacity of at least 200,000 Btu per hour.
§ 150.0(n)2:	**Recirculating Loops.** Recirculating loops serving multiple dwelling units must meet the requirements of § 110.3(c)5.
§ 150.0(n)3:	**Solar Water-heating Systems.** Solar water-heating systems and collectors must be certified and rated by the Solar Rating and Certification Corporation (SRCC), the International Association of Plumbing and Mechanical Officials, Research and Testing (IAPMO R&T), or by a listing agency that is approved by the Executive Director.
Ducts and Fans Measures:	
§ 110.8(d)3:	**Ducts.** Insulation installed on an existing space-conditioning duct must comply with § 604.0 of the California Mechanical Code (CMC). If a contractor installs the insulation, the contractor must certify to the customer, in writing, that the insulation meets this requirement.
§ 150.0(m)1:	**CMC Compliance.** All air-distribution system ducts and plenums must meet the requirements of the CMC §§ 601.0, 602.0, 603.0, 604.0, 605.0 and ANSI/SMACNA-006-2006 HVAC Duct Construction Standards Metal and Flexible 3rd Edition. Portions of supply-air and return-air ducts and plenums must be insulated to a minimum installed level of R-6.0 or a minimum installed level of R-4.2 when ducts are entirely in conditioned space as confirmed through field verification and diagnostic testing (RA3.1.4.3.8). Portions of the duct system completely exposed and surrounded by directly conditioned space are not required to be insulated. Connections of metal ducts and inner core of flexible ducts must be mechanically fastened. Openings must be sealed with mastic, tape, or other duct-closure system that meets the applicable requirements of UL 181, UL 181A, or UL 181B or aerosol sealant that meets the requirements of UL 723. If mastic or tape is used to seal openings greater than ¼ inch, the combination of mastic and either mesh or tape must be used. Building cavities, support platforms for air handlers, and plenums designed or constructed with materials other than sealed sheet metal, duct board or flexible duct must not be used to convey conditioned air. Building cavities and support platforms may contain ducts. Ducts installed in cavities and support platforms must not be compressed to cause reductions in the cross-sectional area.*
§ 150.0(m)2:	**Factory-Fabricated Duct Systems.** Factory-fabricated duct systems must comply with applicable requirements for duct construction, connections, and closures; joints and seams of duct systems and their components must not be sealed with cloth back rubber adhesive duct tapes unless such tape is used in combination with mastic and draw bands.
§ 150.0(m)3:	**Field-Fabricated Duct Systems.** Field-fabricated duct systems must comply with applicable requirements for: pressure-sensitive tapes, mastics, sealants, and other requirements specified for duct construction.
§ 150.0(m)7:	**Backdraft Damper.** Fan systems that exchange air between the conditioned space and outdoors must have backdraft or automatic dampers.
§ 150.0(m)8:	**Gravity Ventilation Dampers.** Gravity ventilating systems serving conditioned space must have either automatic or readily accessible, manually operated dampers in all openings to the outside, except combustion inlet and outlet air openings and elevator shaft vents.
§ 150.0(m)9:	**Protection of Insulation.** Insulation must be protected from damage, sunlight, moisture, equipment maintenance, and wind. Insulation exposed to weather must be suitable for outdoor service. For example, protected by aluminum, sheet metal, painted canvas, or plastic cover. Cellular foam insulation must be protected as above or painted with a coating that is water retardant and provides shielding from solar radiation.
§ 150.0(m)10:	**Porous Inner Core Flex Duct.** Porous inner core flex ducts must have a non-porous layer between the inner core and outer vapor barrier.
§ 150.0(m)11:	**Duct System Sealing and Leakage Test.** When space conditioning systems use forced air duct systems to supply conditioned air to an occupiable space, the ducts must be sealed and duct leakage tested, as confirmed through field verification and diagnostic testing, in accordance with § 150.0(m)11 and Reference Residential Appendix RA3.
§ 150.0(m)12:	**Air Filtration.** Space conditioning systems with ducts exceeding 10 feet and the supply side of ventilation systems must have MERV 13 or equivalent filters. Filters for space conditioning systems must have a two inch depth or can be one inch if sized per Equation 150.0-A. Pressure drops and labeling must meet the requirements in §150.0(m)12. Filters must be accessible for regular service.*
§ 150.0(m)13:	**Space Conditioning System Airflow Rate and Fan Efficacy.** Space conditioning systems that use ducts to supply cooling must have a hole for the placement of a static pressure probe, or a permanently installed static pressure probe in the supply plenum. Airflow must be ≥ 350 CFM per ton of nominal cooling capacity, and an air-handling unit fan efficacy ≤ 0.45 watts per CFM for gas furnace air handlers and ≤ 0.58 watts per CFM for all others. Small duct high velocity systems must provide an airflow ≥ 250 CFM per ton of nominal cooling capacity, and an air-handling unit fan efficacy ≤ 0.62 watts per CFM. Field verification testing is required in accordance with Reference Residential Appendix RA3.3.*

2019 Low-Rise Residential Mandatory Measures Summary

Requirements for Ventilation and Indoor Air Quality:	
§ 150.0(o)1:	**Requirements for Ventilation and Indoor Air Quality**. All dwelling units must meet the requirements of ASHRAE Standard 62.2, Ventilation and Acceptable Indoor Air Quality in Residential Buildings subject to the amendments specified in § 150.0(o)1.
§ 150.0(o)1C:	**Single Family Detached Dwelling Units.** Single family detached dwelling units, and attached dwelling units not sharing ceilings or floors with other dwelling units, occupiable spaces, public garages, or commercial spaces must have mechanical ventilation airflow provided at rates determined by ASHRAE 62.2 Sections 4.1.1 and 4.1.2 and as specified in § 150.0(o)1C.
§ 150.0(o)1E:	**Multifamily Attached Dwelling Units.** Multifamily attached dwelling units must have mechanical ventilation airflow provided at rates in accordance with Equation 150.0-B and must be either a balanced system or continuous supply or continuous exhaust system. If a balanced system is not used, all units in the building must use the same system type and the dwelling-unit envelope leakage must be ≤ 0.3 CFM at 50 Pa (0.2 inch water) per square foot of dwelling unit envelope surface area and verified in accordance with Reference Residential Appendix RA3.8.
§ 150.0(o)1F:	**Multifamily Building Central Ventilation Systems.** Central ventilation systems that serve multiple dwelling units must be balanced to provide ventilation airflow for each dwelling unit served at a rate equal to or greater than the rate specified by Equation 150.0-B. All unit airflows must be within 20 percent of the unit with the lowest airflow rate as it relates to the individual unit's minimum required airflow rate needed for compliance.
§ 150.0(o)1G:	**Kitchen Range Hoods.** Kitchen range hoods must be rated for sound in accordance with Section 7.2 of ASHRAE 62.2.
§ 150.0(o)2:	**Field Verification and Diagnostic Testing.** Dwelling unit ventilation airflow must be verified in accordance with Reference Residential Appendix RA3.7. A kitchen range hood must be verified in accordance with Reference Residential Appendix RA3.7.4.3 to confirm it is rated by HVI to comply with the airflow rates and sound requirements as specified in Section 5 and 7.2 of ASHRAE 62.2.
Pool and Spa Systems and Equipment Measures:	
§ 110.4(a):	**Certification by Manufacturers.** Any pool or spa heating system or equipment must be certified to have all of the following: a thermal efficiency that complies with the Appliance Efficiency Regulations; an on-off switch mounted outside of the heater that allows shutting off the heater without adjusting the thermostat setting; a permanent weatherproof plate or card with operating instructions; and must not use electric resistance heating.*
§ 110.4(b)1:	**Piping.** Any pool or spa heating system or equipment must be installed with at least 36 inches of pipe between the filter and the heater, or dedicated suction and return lines, or built-in or built-up connections to allow for future solar heating.
§ 110.4(b)2:	**Covers.** Outdoor pools or spas that have a heat pump or gas heater must have a cover.
§ 110.4(b)3:	**Directional Inlets and Time Switches for Pools.** Pools must have directional inlets that adequately mix the pool water, and a time switch that will allow all pumps to be set or programmed to run only during off-peak electric demand periods.
§ 110.5:	**Pilot Light.** Natural gas pool and spa heaters must not have a continuously burning pilot light.
§ 150.0(p):	**Pool Systems and Equipment Installation.** Residential pool systems or equipment must meet the specified requirements for pump sizing, flow rate, piping, filters, and valves.*
Lighting Measures:	
§ 110.9:	**Lighting Controls and Components.** All lighting control devices and systems, ballasts, and luminaires must meet the applicable requirements of § 110.9.*
§ 150.0(k)1A:	**Luminaire Efficacy.** All installed luminaires must meet the requirements in Table 150.0-A.
§ 150.0(k)1B:	**Blank Electrical Boxes.** The number of electrical boxes that are more than five feet above the finished floor and do not contain a luminaire or other device must be no greater than the number of bedrooms. These electrical boxes must be served by a dimmer, vacancy sensor control, or fan speed control.
§ 150.0(k)1C:	**Recessed Downlight Luminaires in Ceilings.** Luminaires recessed into ceilings must meet all of the requirements for: insulation contact (IC) labeling; air leakage; sealing; maintenance; and socket and light source as described in § 150.0(k)1C.
§ 150.0(k)1D:	**Electronic Ballasts for Fluorescent Lamps.** Ballasts for fluorescent lamps rated 13 watts or greater must be electronic and must have an output frequency no less than 20 kHz.
§ 150.0(k)1E:	**Night Lights, Step Lights, and Path Lights.** Night lights, step lights and path lights are not required to comply with Table 150.0-A or be controlled by vacancy sensors provided they are rated to consume no more than 5 watts of power and emit no more than 150 lumens.
§ 150.0(k)1F:	**Lighting Integral to Exhaust Fans.** Lighting integral to exhaust fans (except when installed by the manufacturer in kitchen exhaust hoods) must meet the applicable requirements of § 150.0(k).*
§ 150.0(k)1G:	**Screw based luminaires.** Screw based luminaires must contain lamps that comply with Reference Joint Appendix JA8.*
§ 150.0(k)1H:	**Light Sources in Enclosed or Recessed Luminaires.** Lamps and other separable light sources that are not compliant with the JA8 elevated temperature requirements, including marking requirements, must not be installed in enclosed or recessed luminaires.
§ 150.0(k)1I:	**Light Sources in Drawers, Cabinets, and Linen Closets.** Light sources internal to drawers, cabinetry or linen closets are not required to comply with Table 150.0-A or be controlled by vacancy sensors provided that they are rated to consume no more than 5 watts of power, emit no more than 150 lumens, and are equipped with controls that automatically turn the lighting off when the drawer, cabinet or linen closet is closed.
§ 150.0(k)2A:	**Interior Switches and Controls.** All forward phase cut dimmers used with LED light sources must comply with NEMA SSL 7A.
§ 150.0(k)2B:	**Interior Switches and Controls.** Exhaust fans must be controlled separately from lighting systems.*
§ 150.0(k)2C:	**Interior Switches and Controls.** Lighting must have readily accessible wall-mounted controls that allow the lighting to be manually turned ON and OFF.*
§ 150.0(k)2D:	**Interior Switches and Controls.** Controls and equipment must be installed in accordance with manufacturer's instructions.
§ 150.0(k)2E:	**Interior Switches and Controls.** Controls must not bypass a dimmer, occupant sensor, or vacancy sensor function if the control is installed to comply with § 150.0(k).
§ 150.0(k)2F:	**Interior Switches and Controls.** Lighting controls must comply with the applicable requirements of § 110.9.

2019 Low-Rise Residential Mandatory Measures Summary

§ 150.0(k)2G:	**Interior Switches and Controls.** An energy management control system (EMCS) may be used to comply with control requirements if it: provides functionality of the specified control according to § 110.9; meets the Installation Certificate requirements of § 130.4; meets the EMCS requirements of § 130.0(e); and meets all other requirements in § 150.0(k)2.
§ 150.0(k)2H:	**Interior Switches and Controls.** A multiscene programmable controller may be used to comply with dimmer requirements in § 150.0(k) if it provides the functionality of a dimmer according to § 110.9, and complies with all other applicable requirements in § 150.0(k)2.
§ 150.0(k)2I:	**Interior Switches and Controls.** In bathrooms, garages, laundry rooms, and utility rooms, at least one luminaire in each of these spaces must be controlled by an occupant sensor or a vacancy sensor providing automatic-off functionality. If an occupant sensor is installed, it must be initially configured to manual-on operation using the manual control required under Section 150.0(k)2C.
§ 150.0(k)2J:	**Interior Switches and Controls.** Luminaires that are or contain light sources that meet Reference Joint Appendix JA8 requirements for dimming, and that are not controlled by occupancy or vacancy sensors, must have dimming controls.*
§ 150.0(k)2K:	**Interior Switches and Controls.** Under cabinet lighting must be controlled separately from ceiling-installed lighting systems.
§ 150.0(k)3A:	**Residential Outdoor Lighting.** For single-family residential buildings, outdoor lighting permanently mounted to a residential building, or to other buildings on the same lot, must meet the requirement in item § 150.0(k)3Ai (ON and OFF switch) and the requirements in either § 150.0(k)3Aii (photocell and either a motion sensor or automatic time switch control) or § 150.0(k)3Aiii (astronomical time clock), or an EMCS.
§ 150.0(k)3B:	**Residential Outdoor Lighting.** For low-rise residential buildings with four or more dwelling units, outdoor lighting for private patios, entrances, balconies, and porches; and residential parking lots and carports with less than eight vehicles per site must comply with either § 150.0(k)3A or with the applicable requirements in Sections 110.9, 130.0, 130.2, 130.4, 140.7 and 141.0.
§ 150.0(k)3C:	**Residential Outdoor Lighting.** For low-rise residential buildings with four or more dwelling units, any outdoor lighting for residential parking lots or carports with a total of eight or more vehicles per site and any outdoor lighting not regulated by § 150.0(k)3B or § 150.0(k)3D must comply with the applicable requirements in Sections 110.9, 130.0, 130.2, 130.4, 140.7 and 141.0.
§ 150.0(k)4:	**Internally illuminated address signs.** Internally illuminated address signs must comply with § 140.8; or must consume no more than 5 watts of power as determined according to § 130.0(c).
§ 150.0(k)5:	**Residential Garages for Eight or More Vehicles.** Lighting for residential parking garages for eight or more vehicles must comply with the applicable requirements for nonresidential garages in Sections 110.9, 130.0, 130.1, 130.4, 140.6, and 141.0.
§ 150.0(k)6A:	**Interior Common Areas of Low-rise Multifamily Residential Buildings.** In a low-rise multifamily residential building where the total interior common area in a single building equals 20 percent or less of the floor area, permanently installed lighting for the interior common areas in that building must be comply with Table 150.0-A and be controlled by an occupant sensor.
§ 150.0(k)6B:	**Interior Common Areas of Low-rise Multifamily Residential Buildings.** In a low-rise multifamily residential building where the total interior common area in a single building equals more than 20 percent of the floor area, permanently installed lighting for the interior common areas in that building must: i. Comply with the applicable requirements in Sections 110.9, 130.0, 130.1, 140.6 and 141.0; and ii. Lighting installed in corridors and stairwells must be controlled by occupant sensors that reduce the lighting power in each space by at least 50 percent. The occupant sensors must be capable of turning the light fully on and off from all designed paths of ingress and egress.
Solar Ready Buildings:	
§ 110.10(a)1:	**Single Family Residences.** Single family residences located in subdivisions with 10 or more single family residences and where the application for a tentative subdivision map for the residences has been deemed complete and approved by the enforcement agency, which do not have a photovoltaic system installed, must comply with the requirements of § 110.10(b) through § 110.10(e).
§ 110.10(a)2:	**Low-rise Multifamily Buildings.** Low-rise multi-family buildings that do not have a photovoltaic system installed must comply with the requirements of § 110.10(b) through § 110.10(d).
§ 110.10(b)1:	**Minimum Solar Zone Area.** The solar zone must have a minimum total area as described below. The solar zone must comply with access, pathway, smoke ventilation, and spacing requirements as specified in Title 24, Part 9 or other parts of Title 24 or in any requirements adopted by a local jurisdiction. The solar zone total area must be comprised of areas that have no dimension less than 5 feet and are no less than 80 square feet each for buildings with roof areas less than or equal to 10,000 square feet or no less than 160 square feet each for buildings with roof areas greater than 10,000 square feet. For single family residences, the solar zone must be located on the roof or overhang of the building and have a total area no less than 250 square feet. For low-rise multi-family buildings the solar zone must be located on the roof or overhang of the building, or on the roof or overhang of another structure located within 250 feet of the building, or on covered parking installed with the building project, and have a total area no less than 15 percent of the total roof area of the building excluding any skylight area. The solar zone requirement is applicable to the entire building, including mixed occupancy.*
§ 110.10(b)2:	**Azimuth.** All sections of the solar zone located on steep-sloped roofs must be oriented between 90 degrees and 300 degrees of true north.
§ 110.10(b)3A:	**Shading.** The solar zone must not contain any obstructions, including but not limited to: vents, chimneys, architectural features, and roof mounted equipment.*
§ 110.10(b)3B:	**Shading.** Any obstruction located on the roof or any other part of the building that projects above a solar zone must be located at least twice the distance, measured in the horizontal plane, of the height difference between the highest point of the obstruction and the horizontal projection of the nearest point of the solar zone, measured in the vertical plane.*
§ 110.10(b)4:	**Structural Design Loads on Construction Documents.** For areas of the roof designated as a solar zone, the structural design loads for roof dead load and roof live load must be clearly indicated on the construction documents.
§ 110.10(c):	**Interconnection Pathways.** The construction documents must indicate: a location reserved for inverters and metering equipment and a pathway reserved for routing of conduit from the solar zone to the point of interconnection with the electrical service; and for single family residences and central water-heating systems, a pathway reserved for routing plumbing from the solar zone to the water-heating system.
§ 110.10(d):	**Documentation.** A copy of the construction documents or a comparable document indicating the information from § 110.10(b) through § 110.10(c) must be provided to the occupant.
§ 110.10(e)1:	**Main Electrical Service Panel.** The main electrical service panel must have a minimum busbar rating of 200 amps.
§ 110.10(e)2:	**Main Electrical Service Panel.** The main electrical service panel must have a reserved space to allow for the installation of a double pole circuit breaker for a future solar electric installation. The reserved space must be permanently marked as "For Future Solar Electric".

DANIEL LICHAU
1900 BRUSH CREEK RD
SANTA ROSA, CA. 95404

RE: OBSERVATION OF FOUNDATION FROM PHOTOS AND PERSONALLY AT 1900 BRUSH CREEK ROAD, SANTA ROSA

Dear Daniel,

This letter confirms my personal site observation of the foundation and footing for your house addition. The footing was installed a minimum of 24" into the ground, which from the photos you provided appear to be in solid ground. The footing width is a minimum of 36" and appears that below the forms that were set ended with more than 48" in width. It is my professional opinion that the footing size is sufficient to adequately support the structure.

CITY ENGINEER'S CERTIFICATE

I, Anthony A. Cabrera, City Engineer, acting for the City of Santa Rosa, State of California, have examined this map of this subdivision and found it to substantially conform to the tentative map approved June 27, 2000, and any approved alterations thereof. The applicable conditions of approval of the Tentative Map, the State Subdivision Map Act and the applicable provisions of Title 19 of the Santa Rosa City Code and are satisfied that this map is technically correct. I hereby approve the subdivision shown upon this map and accept, subject to improvement, for public use the public utility easement, public sewer easement, and relinquishment of vehicular access rights, as shown on said map, within said subdivision, including all public facilities as shown on City Engineer Drawing number 2002-30

Dated 5-30, 2002

Anthony A. Cabrera, P.L.S. 7281
City Engineer, City of Santa Rosa
State of California
Expires 12-31-2005

SURVEYOR'S STATEMENT

This map was prepared by me or under my direction and is based upon a field survey in conformance with the requirements of the Subdivision Map Act and local ordinance at the request of Michael G. Dehnert in July, 2000

I hereby state that this parcel map substantially conforms to the approved or conditionally approved tentative map, if any, and monuments shown thereon will be set within one year from the date of filing of this map and all monuments are or will be sufficient to enable the survey to be retraced

MIKE BUTT — Licensed Land Surveyor — LS 5092
Expires 6-30-03

COUNTY CLERK'S CERTIFICATE

I certify that all bonds, money or negotiable papers required under the provisions of the Subdivision Map Act to secure payment of taxes and assessments have been filed with and approved by, the Board of Supervisors of the County of Sonoma, namely, bond(s) under Government Code Sections 66493(a) and 66493(b) in the sums of $ -0- and $ -0- respectively

IN WITNESS THEREOF, I have hereunto set my hand and affixed my official seal this 7th day of June, 2002.

Clerk of the Board of Supervisors
County of Sonoma
State of California

CITY AUDITOR'S CERTIFICATE

I, Ronald L. Bozman, Director of Administrative Services in and for the City of Santa Rosa, State of California, do hereby certify that there are no special assessments against any tract of land that are payable except for special taxes and assessments to total $ -0- which constitute a lien against the property but which are not yet due, said payable and due at the time of filing of this map.

Dated 5/30, 2002

Ronald L. Bozman
Director of Administrative Services
City of Santa Rosa
State of California

RECORDER'S CERTIFICATE

Filed this 11th day of June, 2002 at 10:37 AM in Book 635 of Maps, Page 47 at the request of Anthony A. Cabrera, City Engineer, City of Santa Rosa.

County Recorder
County of Sonoma, State of California
By: Debi Williams

Fee: $ 14.00

Document No. 2002-090808

FIRST AMERICAN TITLE COMPANY

COUNTY TAX COLLECTOR'S CERTIFICATE

According to the records in the office of the undersigned, there are no liens against this subdivision, or any part thereof, for unpaid state, county, municipal or local taxes or special assessments collected as taxes, except taxes or special assessments collected as taxes not yet payable. My estimate of taxes and special assessments collected as taxes not yet payable is $5,100.00

The lands said subdivision is not subject to special assessment of bond which may be paid or not.

Dated 6/6/02

Tax Collector
County of Sonoma, State of California

OWNER'S STATEMENT

We hereby state that we are the sole owners of and have the right, title and interest in and to the real property included within the subdivision shown upon this map and we hereby possess sufficient consent to necessarily to pass clear title to said property and we consent to the making and filing of said map and the subdivision shown hereon, we dedicate for public use the public utility easement, public sewer easement, and relinquishment of vehicular access rights, as shown on said map within said subdivision

CITY ENGINEER'S CERTIFICATE

I, Anthony A. Cabrera, City Engineer, in and for the City of Santa Rosa, State of California, have examined the map of this subdivision and found it to substantially conform to the tentative map approved June 21, 2000, and any approved alterations thereof. The applicable conditions of approval of the Tentative Map, the State Subdivision Map Act and and the applicable provisions of Title 19 of the Santa Rosa City Code and am satisfied that the map is technically correct. I hereby approve the subdivision shown upon this map and accept, subject to improvement, for public use the public utility easement, public sewer easement, and relinquishment of vehicular access rights, as shown on said map, within said subdivision, including all public facilities as shown on City Engineer drawing number 2002-30.

Dated 5/30, 2002

Anthony A. Cabrera

Anthony A. Cabrera, P.L.S. 7332
City Engineer, City of Santa Rosa
State of California
Expires 12-31-2005

SURVEYOR'S STATEMENT

This map was prepared by me or under my direction and is based upon a field survey in conformance with the requirements of the Subdivision Map Act and local ordinance at the request of Michael G. Dehnert in July, 2000.
I hereby state that this parcel map substantially conforms to the approved or conditionally approved tentative map, if any, and monuments shown hereon will be set within one year from the date of filing of this map and said monuments are or will be sufficient to enable the survey to be retraced.

Re: CALGreen Site Inspection Verification

Address: 1900 Brush Creek Road

Project Description: addition-320 sq ft

To whom it may concern:

I have inspected the work and have received documentation sufficient to verify and certify that the project identified above was constructed in accordance with the project CALGreen Checklist and in accordance with the requirements set forth in the California Green Building Standards code as adopted and amended by the City of Santa Rosa Code.

Please contact me if there are any questions

Thank you,

John Craig

John Craig

City of Santa Rosa

2019 CALGreen CHECKLIST
for
RESIDENTIAL ADDITIONS and ALTERATIONS

Applies to building permit applications received on or after January 1, 2020, for additions or alterations that increase the conditioned space of existing low rise residential buildings including hotels, motels, lodging houses, dwellings, dormitories, condominiums, shelters, congregate residences, employee housing, factory-built housing and other types of dwellings containing sleeping accommodations with or without common toilet or cooking facilities including accessory buildings, facilities and uses thereto. **Detached "U" occupancy buildings are not subject to the requirements of CALGreen. Existing site and landscaping improvements that are not otherwise disturbed are also not subject to the requirements of CALGreen. Repairs to existing structures are not subject to CALGreen at this time.**

Project Address: 1900 Brush Creek

Project Name: Lichau addition

Project Description: Residential addition

Instructions:

1. The Owner or the Owner's agent shall employ a qualified CALGreen Inspector, listed by the City of Santa Rosa Building Division, to perform CALGreen Inspector services that apply and to verify and assure the Owner and the Building Division that all required work described herein is properly planned and implemented in the project.
2. The CALGreen Inspector, in collaboration with the owner and the design professional, shall initially complete **Column 2** of this checklist, sign and date the CALGreen Building Acknowledgements section at the end of this checklist and have the checklist printed on or attached to the approved plans for the project. The City's plans examiner will complete **Column 3** of the checklist.
3. When determined necessary by City staff and indicated in **Column 2** of the checklist, the Owner or Contractor shall employ a CALGreen Inspector, certified by ICC, to perform CALGreen Inspector services.
4. In **Column 3**, Building Department staff will verify those measures checked in Column 3 of the checklist under the "City Staff" heading.
5. In **Column 4**, the CALGreen Inspector hired by the Owner will verify those measures checked in Column 2 of the checklist under the "CALGreen Inspector" heading.
6. Prior to final inspection by the Building Department, the CALGreen Inspector (if required) shall complete **Column 4** and sign and date **the Implementation Verification** section at the end of this checklist.

NOTE: *The CALGreen Inspector shall not be the design professional or contractor for the project and shall not have a financial interest in the project for which services are being provided except for the cost of providing said services*.

Column 1 Feature or Measure	Column 2 Project Requirements *Must be incorporated into the project unless the measure is not applicable (N/A).*	Column 3 Verification To Be Provided By: *Completed by City plan review staff during plan review.*	Column 4 Compliance Verified *Completed by CALGreen Inspector after measure has been completed.*
4.1 PLANNING AND DESIGN			
Site Development			
4.106.2 A plan is developed and implemented to manage storm water drainage during construction.	☒ or ☐ N/A	☐	☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
4.106.3 Construction plans shall indicate how site grading or a drainage system will manage all surface water flows to keep water from entering buildings.	☒ or ☐ N/A	☐	☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
4.2 ENERGY EFFICIENCY			
Performance Approach			
4.201.1 Building meets or exceeds the requirements of the 2019 California Building Energy Efficiency Standards. (Tier 1 not applicable)	☒ or ☐ N/A	☐	☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
4.3 WATER EFFICIENCY AND CONSERVATION			
Indoor Water Use			
4.303.1 Plumbing fixtures (water closets and urinals) and fittings (faucets and showerheads) installed in residential buildings shall comply with the prescriptive requirements of Sections 4.303.1.1 through 4.303.1.4.4.	☒ or ☐ N/A	☐	☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			

Column 1 Feature or Measure	Column 2 Project Requirements *Must be incorporated into the project unless the measure is not applicable (N/A).*	Column 3 Verification To Be Provided By: *Completed by City plan review staff during plan review.*	Column 4 Compliance Verified *Completed by CALGreen Inspector after measure has been completed.*
4.303.2 Plumbing fixtures and fittings required in Section 4.303.1 shall be installed in accordance with the California Plumbing Code, and shall meet the applicable referenced standards.	☒ or ☐ N/A	☐	☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
Outdoor Water Use			
4.304.1 Automatic irrigation systems installed at the time of final inspection shall be weather- or soil moisture-based.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			

4.4 MATERIAL CONSERVATION AND RESOURCE EFFICIENCY

Enhanced Durability and Reduced Maintenance			
4.406.1 Annular spaces around pipes, electric cables, conduits, or other openings in plates at exterior walls shall be protected against the passage of rodents by closing such openings with cement mortar, concrete masonry or similar method acceptable to the enforcing agency.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
Construction Waste Reduction, Disposal and Recycling			
4.408.1 Recycle and/or salvage for reuse a minimum of 65% of the nonhazardous construction and demolition waste. (Per 4.408.2, 4.408.3 or 4.408.4)	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
Building Maintenance and Operation			
4.410.1 An operation and maintenance manual shall be provided to the building occupant or owner.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			

Column 1 Feature or Measure	Column 2 Project Requirements *Must be incorporated into the project unless the measure is not applicable (N/A).*	Column 3 Verification To Be Provided By: *Completed by City plan review staff during plan review.*	Column 4 Compliance Verified *Completed by CALGreen Inspector after measure has been completed.*
4.5 ENVIRONMENTAL QUALITY			
Fireplaces			
4.503.1 Any installed gas fireplace shall be a direct-vent sealed-combustion type. Any installed woodstove or pellet stove shall comply with U.S. EPA New Source Performance Standards (NSPS) emission limits.	☒ or ☐ N/A	☐	☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
Pollutant Control			
4.504.1 Duct openings and other related air distribution component openings shall be covered during construction.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
4.504.2.1 Adhesives, sealants and caulks shall be compliant with VOC and other toxic compound limits.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
4.504.2.2 Paints, stains and other coatings shall be compliant with VOC limits.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
4.504.2.3 Aerosol paints and other coatings shall be compliant with product weighted MIR Limits for ROC and other toxic compounds.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
4.504.2.4 Documentation shall be provided to verify that compliant VOC limit finish materials have been used.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			

Column 1 Feature or Measure	Column 2 Project Requirements *Must be incorporated into the project unless the measure is not applicable (N/A).*	Column 3 Verification To Be Provided By: *Completed by City plan review staff during plan review.*	Column 4 Compliance Verified *Completed by CALGreen Inspector after measure has been completed.*
4.504.3 Carpet and carpet systems shall be compliant with VOC limits.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
4.504.4 80 percent of floor area receiving resilient flooring shall comply with specified VOC criteria.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
4.504.5 Particleboard, medium density fiberboard (MDF), and hardwood plywood used in interior finish systems shall comply with low formaldehyde emission standards.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
Interior Moisture Control			
4.505.2 Vapor retarder and capillary break is installed at slab on grade foundations.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
4.505.3 Moisture content of building materials used in wall and floor framing is checked before enclosure.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
Indoor Air Quality and Exhaust			
4.506.1 Humidity controlled exhaust fans which terminate outside the building are provided in every bathroom unless otherwise a component of a whole house ventilation system.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			

Column 1 Feature or Measure	Column 2 Project Requirements *Must be incorporated into the project unless the measure is not applicable (N/A).*	Column 3 Verification To Be Provided By: *Completed by City plan review staff during plan review.*	Column 4 Compliance Verified *Completed by CALGreen Inspector after measure has been completed.*
Environmental Comfort			
4.507.2. Duct systems are sized and designed and equipment is selected using the following methods: 1. Establish heat loss and heat gain values according to ANSI/ACCA Manual J-2016 or equivalent. 2. Size duct systems according to ANSI/ACCA 1 Manual D-2016 or equivalent. 3. Select heating and cooling equipment according to ANSI/ACCA 3 Manual S-2014 or equivalent.	☒ or ☐ N/A	☐	☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
Innovative Concepts and Local Environmental Conditions			
Items necessary to address innovative concepts or local environmental conditions.			
Item 1:		☐	☐
INSTALLER AND CALGreen INSPECTOR QUALIFICATIONS			
Qualifications			
702.1 HVAC system installers are trained and certified in the proper installation of HVAC systems.	☒ or ☐ N/A		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
702.2 The CALGreen Inspector for this project is qualified and able to demonstrate competence in the discipline they inspect and verify.	☒ or ☐ N/A	☐	
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			
Verifications			
703.1 Verification of compliance with this code many include construction documents, plans, specifications, builder or installer certification, inspection reports, or other methods acceptable to the enforcing agency which show substantial conformance.	☒		☒
Description of proposed measure(s) or explanation of why it is not applicable (N/A)			

Green Building Acknowledgments

Project Address: 1900 Brush Creek

Project Description: Residential addition

Section 1 - Design Verification

Complete all lines of Section 1- "Design Verification" and submit the completed checklist (Columns 1 and 2) with the plans and building permit application to the Building Department.

The owner, design professional and the CALGreen inspector have reviewed the plans and certify that the items checked above are hereby incorporated into the project plans and will be implemented into the project in accordance with the requirements set forth in the 2019 California Green Building Standards Code.

DANIEL LICHAU
1900 BRUSH CREEK RD
SANTA ROSA, CA. 95404

RE: OBSERVATION OF FOUNDATION FROM PHOTOS AND PERSONALLY AT 1900 BRUSH CREEK ROAD, SANTA ROSA

Dear Daniel,

This letter confirms my personal site observation of the foundation and footing for your house addition. The footing was infilled a minimum of 24" into the ground, which from the photos you provided appear to be in solid ground. The footing width is a minimum of 36" and appears that below the forms that were set ended with more than 48" in width. It is my professional opinion that the footing size is sufficient to adequately support the structure.

City/State/Zip: FRAZIER PARK, CA 93225	Phone: (800) 237-8824

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

1. I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design identified on this Certificate of Compliance.
2. I certify that the energy features and performance specifications identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.
3. The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.

2019 Low-Rise Residential Mandatory Measures Summary

*NOTE: Low-rise residential buildings subject to the Energy Standards must comply with all applicable mandatory measures, regardless of the compliance approach used. Review the respective section for more information. *Exceptions may apply.*
(01/2020)

Building Envelope Measures:	
§ 110.6(a)1:	**Air Leakage.** Manufactured fenestration, exterior doors, and exterior pet doors must limit air leakage to 0.3 CFM per square foot or less when tested per NFRC-400, ASTM E283 or AAMA/WDMA/CSA 101/I.S.2/A440-2011.*
§ 110.6(a)5:	**Labeling.** Fenestration products and exterior doors must have a label meeting the requirements of § 10-111(a).
§ 110.6(b):	**Field fabricated exterior doors and fenestration** products must use U-factors and solar heat gain coefficient (SHGC) values from Tables 110.6-A, 110.6-B, or JA4.5 for exterior doors. They must be caulked and/or weather-stripped.*
§ 110.7:	**Air Leakage.** All joints, penetrations, and other openings in the building envelope that are potential sources of air leakage must be caulked, gasketed, or weather stripped.
§ 110.8(a):	**Insulation Certification by Manufacturers.** Insulation must be certified by the Department of Consumer Affairs, Bureau of Household Goods and Services (BHGS).
§ 110.8(g):	**Insulation Requirements for Heated Slab Floors.** Heated slab floors must be insulated per the requirements of § 110.8(g).
§ 110.8(i):	**Roofing Products Solar Reflectance and Thermal Emittance.** The thermal emittance and aged solar reflectance values of the roofing material must meet the requirements of § 110.8(i) and be labeled per §10-113 when the installation of a cool roof is specified on the CF1R.
§ 110.8(j):	**Radiant Barrier.** When required, radiant barriers must have an emittance of 0.05 or less and be certified to the Department of Consumer Affairs.
§ 150.0(a):	**Ceiling and Rafter Roof Insulation.** Minimum R-22 insulation in wood-frame ceiling; or the weighted average U-factor must not exceed 0.043. Minimum R-19 or weighted average U-factor of 0.054 or less in a rafter roof alteration. Attic access doors must have permanently attached insulation using adhesive or mechanical fasteners. The attic access must be gasketed to prevent air leakage. Insulation must be installed in direct contact with a continuous roof or ceiling which is sealed to limit infiltration and exfiltration as specified in § 110.7, including but not limited to placing insulation either above or below the roof deck or on top of a drywall ceiling.*
§ 150.0(b):	**Loose-fill Insulation.** Loose fill insulation must meet the manufacturer's required density for the labeled R-value.
§ 150.0(c):	**Wall Insulation.** Minimum R-13 insulation in 2x4 inch wood framing wall or have a U-factor of 0.102 or less, or R-20 in 2x6 inch wood framing or have a U-factor of 0.071 or less. Opaque non-framed assemblies must have an overall assembly U-factor not exceeding 0.102. Masonry walls must meet Tables 150.1-A or B.*
§ 150.0(d):	**Raised-floor Insulation.** Minimum R-19 insulation in raised wood framed floor or 0.037 maximum U-factor.*
§ 150.0(f):	**Slab Edge Insulation.** Slab edge insulation must meet all of the following: have a water absorption rate, for the insulation material alone without facings, no greater than 0.3 percent; have a water vapor permeance no greater than 2.0 perm per inch; be protected from physical damage and UV light deterioration; and, when installed as part of a heated slab floor, meet the requirements of § 110.8(g).
§ 150.0(g)1:	**Vapor Retarder.** In climate zones 1 through 16, the earth floor of unvented crawl space must be covered with a Class I or Class II vapor retarder. This requirement also applies to controlled ventilation crawl space for buildings complying with the exception to § 150.0(d).
§ 150.0(g)2:	**Vapor Retarder.** In climate zones 14 and 16, a Class I or Class II vapor retarder must be installed on the conditioned space side of all insulation in all exterior walls, vented attics, and unvented attics with air-permeable insulation.
§ 150.0(q):	**Fenestration Products.** Fenestration, including skylights, separating conditioned space from unconditioned space or outdoors must have a maximum U-factor of 0.58; or the weighted average U-factor of all fenestration must not exceed 0.58.*
Fireplaces, Decorative Gas Appliances, and Gas Log Measures:	
§ 110.5(e)	**Pilot Light.** Continuously burning pilot lights are not allowed for indoor and outdoor fireplaces.
§ 150.0(e)1:	**Closable Doors.** Masonry or factory-built fireplaces must have a closable metal or glass door covering the entire opening of the firebox.
§ 150.0(e)2:	**Combustion Intake.** Masonry or factory-built fireplaces must have a combustion outside air intake, which is at least six square inches in area and is equipped with a readily accessible, operable, and tight-fitting damper or combustion-air control device.*
§ 150.0(e)3:	**Flue Damper.** Masonry or factory-built fireplaces must have a flue damper with a readily accessible control.*
Space Conditioning, Water Heating, and Plumbing System Measures:	
§ 110.0-§ 110.3:	**Certification.** Heating, ventilation and air conditioning (HVAC) equipment, water heaters, showerheads, faucets, and all other regulated appliances must be certified by the manufacturer to the California Energy Commission.*
§ 110.2(a):	**HVAC Efficiency.** Equipment must meet the applicable efficiency requirements in Table 110.2-A through Table 110.2-K.*
§ 110.2(b):	**Controls for Heat Pumps with Supplementary Electric Resistance Heaters.** Heat pumps with supplementary electric resistance heaters must have controls that prevent supplementary heater operation when the heating load can be met by the heat pump alone; and in which the cut-on temperature for compression heating is higher than the cut-on temperature for supplementary heating, and the cut-off temperature for compression heating is higher than the cut-off temperature for supplementary heating.*
§ 110.2(c):	**Thermostats.** All heating or cooling systems not controlled by a central energy management control system (EMCS) must have a setback thermostat.*
§ 110.3(c)4:	**Water Heating Recirculation Loops Serving Multiple Dwelling Units.** Water heating recirculation loops serving multiple dwelling units must meet the air release valve, backflow prevention, pump priming, pump isolation valve, and recirculation loop connection requirements of § 110.3(c)4.
§ 110.3(c)6:	**Isolation Valves.** Instantaneous water heaters with an input rating greater than 6.8 kBtu per hour (2 kW) must have isolation valves with hose bibbs or other fittings on both cold and hot water lines to allow for flushing the water heater when the valves are closed.
§ 110.5:	**Pilot Lights.** Continuously burning pilot lights are prohibited for natural gas: fan-type central furnaces; household cooking appliances (except appliances without an electrical supply voltage connection with pilot lights that consume less than 150 Btu per hour); and pool and spa heaters.*
§ 150.0(h)1:	**Building Cooling and Heating Loads.** Heating and/or cooling loads are calculated in accordance with the ASHRAE Handbook, Equipment Volume, Applications Volume, and Fundamentals Volume; the SMACNA Residential Comfort System Installation Standards Manual; or the ACCA Manual J using design conditions specified in § 150.0(h)2.

§ 150.0(h)3A:	Clearances. Air conditioner and heat pump outdoor condensing units must have a clearance of at least five feet from the outlet of any dryer
§ 150.0(h)3B:	Liquid Line Drier. Air conditioners and heat pump systems must be equipped with liquid line filter driers if required, as specified by the manufacturer's instructions.
§ 150.0(j)1:	Storage Tank Insulation. Unfired hot water tanks, such as storage tanks and backup storage tanks for solar water-heating systems, must have a minimum of R-12 external insulation or R-16 internal insulation where the internal insulation R-value is indicated on the exterior of the tank.
§ 150.0(j)2A:	Water Piping, Solar Water-heating System Piping, and Space Conditioning System Line Insulation. All domestic hot water piping must be insulated as specified in Section 609.11 of the California Plumbing Code. In addition, the following piping conditions must have a minimum insulation wall thickness of one inch or a minimum insulation R-value of 7.7: the first five feet of cold water pipes from the storage tank; all hot water piping with a nominal diameter equal to or greater than 3/4 inch and less than one inch; all hot water piping with a nominal diameter less than 3/4 inch that is: associated with a domestic hot water recirculation system, from the heating source to storage tank or between tanks, buried below grade, and from the heating source to kitchen fixtures.*
§ 150.0(j)3:	Insulation Protection. Piping insulation must be protected from damage, including that due to sunlight, moisture, equipment maintenance, and wind as required by Section 120.3(b). Insulation exposed to weather must be water retardant and protected from UV light (no adhesive tapes). Insulation covering chilled water piping and refrigerant suction piping located outside the conditioned space must include, or be protected by, a Class I or Class II vapor retarder. Pipe insulation buried below grade must be installed in a waterproof and non-crushable casing or sleeve.
§ 150.0(n)1:	Gas or Propane Water Heating Systems. Systems using gas or propane water heaters to serve individual dwelling units must include all of the following: A dedicated 125 volt, 20 amp electrical receptacle connected to the electric panel with a 120/240 volt 3 conductor, 10 AWG copper branch circuit, within three feet of the water heater without obstruction. Both ends of the unused conductor must be labeled with the word "spare" and be electrically isolated. Have a reserved single pole circuit breaker space in the electrical panel adjacent to the circuit breaker for the branch circuit and labeled with the words "Future 240V Use"; a Category III or IV vent, or a Type B vent with straight pipe between the outside termination and the space where the water heater is installed; a condensate drain that is no more than two inches higher than the base of the water heater, and allows natural draining without pump assistance; and a gas supply line with a capacity of at least 200,000 Btu per hour.
§ 150.0(n)2:	Recirculating Loops. Recirculating loops serving multiple dwelling units must meet the requirements of § 110.3(c)5.
§ 150.0(n)3:	Solar Water-heating Systems. Solar water-heating systems and collectors must be certified and rated by the Solar Rating and Certification Corporation (SRCC), the International Association of Plumbing and Mechanical Officials, Research and Testing (IAPMO R&T), or by a listing agency that is approved by the Executive Director.
Ducts and Fans Measures:	
§ 110.8(d)3:	Ducts. Insulation installed on an existing space-conditioning duct must comply with § 604.0 of the California Mechanical Code (CMC). If a contractor installs the insulation, the contractor must certify to the customer, in writing, that the insulation meets this requirement.
§ 150.0(m)1:	CMC Compliance. All air-distribution system ducts and plenums must meet the requirements of the CMC §§ 601.0, 602.0, 603.0, 604.0, 605.0 and ANSI/SMACNA-006-2006 HVAC Duct Construction Standards Metal and Flexible 3rd Edition. Portions of supply-air and return-air ducts and plenums must be insulated to a minimum installed level of R-6.0 or a minimum installed level of R-4.2 when ducts are entirely in conditioned space as confirmed through field verification and diagnostic testing (RA3.1.4.3.8). Portions of the duct system completely exposed and surrounded by directly conditioned space are not required to be insulated. Connections of metal ducts and inner core of flexible ducts must be mechanically fastened. Openings must be sealed with mastic, tape, or other duct-closure system that meets the applicable requirements of UL 181, UL 181A, or UL 181B or aerosol sealant that meets the requirements of UL 723. If mastic or tape is used to seal openings greater than ¼ inch, the combination of mastic and either mesh or tape must be used. Building cavities, support platforms for air handlers, and plenums designed or constructed with materials other than sealed sheet metal, duct board or flexible duct must not be used to convey conditioned air. Building cavities and support platforms may contain ducts. Ducts installed in cavities and support platforms must not be compressed to cause reductions in the cross-sectional area.*
§ 150.0(m)2:	Factory-Fabricated Duct Systems. Factory-fabricated duct systems must comply with applicable requirements for duct construction, connections, and closures; joints and seams of duct systems and their components must not be sealed with cloth back rubber adhesive duct tapes unless such tape is used in combination with mastic and draw bands.
§ 150.0(m)3:	Field-Fabricated Duct Systems. Field-fabricated duct systems must comply with applicable requirements for: pressure-sensitive tapes, mastics, sealants, and other requirements specified for duct construction.
§ 150.0(m)7:	Backdraft Damper. Fan systems that exchange air between the conditioned space and outdoors must have backdraft or automatic dampers.
§ 150.0(m)8:	Gravity Ventilation Dampers. Gravity ventilating systems serving conditioned space must have either automatic or readily accessible, manually operated dampers in all openings to the outside, except combustion inlet and outlet air openings and elevator shaft vents.
§ 150.0(m)9:	Protection of Insulation. Insulation must be protected from damage, sunlight, moisture, equipment maintenance, and wind. Insulation exposed to weather must be suitable for outdoor service. For example, protected by aluminum, sheet metal, painted canvas, or plastic cover. Cellular foam insulation must be protected as above or painted with a coating that is water retardant and provides shielding from solar radiation.
§ 150.0(m)10:	Porous Inner Core Flex Duct. Porous inner core flex ducts must have a non-porous layer between the inner core and outer vapor barrier.
§ 150.0(m)11:	Duct System Sealing and Leakage Test. When space conditioning systems use forced air duct systems to supply conditioned air to an occupiable space, the ducts must be sealed and duct leakage tested, as confirmed through field verification and diagnostic testing, in accordance with § 150.0(m)11 and Reference Residential Appendix RA3.
§ 150.0(m)12:	Air Filtration. Space conditioning systems with ducts exceeding 10 feet and the supply side of ventilation systems must have MERV 13 or equivalent filters. Filters for space conditioning systems must have a two inch depth or can be one inch if sized per Equation 150.0-A. Pressure drops and labeling must meet the requirements in §150.0(m)12. Filters must be accessible for regular service.*
§ 150.0(m)13:	Space Conditioning System Airflow Rate and Fan Efficacy. Space conditioning systems that use ducts to supply cooling must have a hole for the placement of a static pressure probe, or a permanently installed static pressure probe in the supply plenum. Airflow must be ≥ 350 CFM per ton of nominal cooling capacity, and an air-handling unit fan efficacy ≤ 0.45 watts per CFM for gas furnace air handlers and ≤ 0.58 watts per CFM for all others. Small duct high velocity systems must provide an airflow ≥ 250 CFM per ton of nominal cooling capacity, and an air-handling unit fan efficacy ≤ 0.62 watts per CFM. Field verification testing is required in accordance with Reference Residential Appendix RA3.3.*

2019 Low-Rise Residential Mandatory Measures Summary

Requirements for Ventilation and Indoor Air Quality:	
§ 150.0(o)1:	**Requirements for Ventilation and Indoor Air Quality**. All dwelling units must meet the requirements of ASHRAE Standard 62.2, Ventilation and Acceptable Indoor Air Quality in Residential Buildings subject to the amendments specified in § 150.0(o)1.
§ 150.0(o)1C:	**Single Family Detached Dwelling Units**. Single family detached dwelling units, and attached dwelling units not sharing ceilings or floors with other dwelling units, occupiable spaces, public garages, or commercial spaces must have mechanical ventilation airflow provided at rates determined by ASHRAE 62.2 Sections 4.1.1 and 4.1.2 and as specified in § 150.0(o)1C.
§ 150.0(o)1E:	**Multifamily Attached Dwelling Units**. Multifamily attached dwelling units must have mechanical ventilation airflow provided at rates in accordance with Equation 150.0-B and must be either a balanced system or continuous supply or continuous exhaust system. If a balanced system is not used, all units in the building must use the same system type and the dwelling-unit envelope leakage must be ≤ 0.3 CFM at 50 Pa (0.2 inch water) per square foot of dwelling unit envelope surface area and verified in accordance with Reference Residential Appendix RA3.8.
§ 150.0(o)1F:	**Multifamily Building Central Ventilation Systems**. Central ventilation systems that serve multiple dwelling units must be balanced to provide ventilation airflow for each dwelling unit served at a rate equal to or greater than the rate specified by Equation 150.0-B. All unit airflows must be within 20 percent of the unit with the lowest airflow rate as it relates to the individual unit's minimum required airflow rate needed for compliance.
§ 150.0(o)1G:	**Kitchen Range Hoods**. Kitchen range hoods must be rated for sound in accordance with Section 7.2 of ASHRAE 62.2.
§ 150.0(o)2:	**Field Verification and Diagnostic Testing**. Dwelling unit ventilation airflow must be verified in accordance with Reference Residential Appendix RA3.7. A kitchen range hood must be verified in accordance with Reference Residential Appendix RA3.7.4.3 to confirm it is rated by HVI to comply with the airflow rates and sound requirements as specified in Section 5 and 7.2 of ASHRAE 62.2.
Pool and Spa Systems and Equipment Measures:	
§ 110.4(a):	**Certification by Manufacturers**. Any pool or spa heating system or equipment must be certified to have all of the following: a thermal efficiency that complies with the Appliance Efficiency Regulations; an on-off switch mounted outside of the heater that allows shutting off the heater without adjusting the thermostat setting; a permanent weatherproof plate or card with operating instructions; and must not use electric resistance heating.*
§ 110.4(b)1:	**Piping**. Any pool or spa heating system or equipment must be installed with at least 36 inches of pipe between the filter and the heater, or dedicated suction and return lines, or built-in or built-up connections to allow for future solar heating.
§ 110.4(b)2:	**Covers**. Outdoor pools or spas that have a heat pump or gas heater must have a cover.
§ 110.4(b)3:	**Directional Inlets and Time Switches for Pools**. Pools must have directional inlets that adequately mix the pool water, and a time switch that will allow all pumps to be set or programmed to run only during off-peak electric demand periods.
§ 110.5:	**Pilot Light**. Natural gas pool and spa heaters must not have a continuously burning pilot light.
§ 150.0(p):	**Pool Systems and Equipment Installation**. Residential pool systems or equipment must meet the specified requirements for pump sizing, flow rate, piping, filters, and valves.*
Lighting Measures:	
§ 110.9:	**Lighting Controls and Components**. All lighting control devices and systems, ballasts, and luminaires must meet the applicable requirements of § 110.9.*
§ 150.0(k)1A:	**Luminaire Efficacy**. All installed luminaires must meet the requirements in Table 150.0-A.
§ 150.0(k)1B:	**Blank Electrical Boxes**. The number of electrical boxes that are more than five feet above the finished floor and do not contain a luminaire or other device must be no greater than the number of bedrooms. These electrical boxes must be served by a dimmer, vacancy sensor control, or fan speed control.
§ 150.0(k)1C:	**Recessed Downlight Luminaires in Ceilings**. Luminaires recessed into ceilings must meet all of the requirements for: insulation contact (IC) labeling; air leakage; sealing; maintenance; and socket and light source as described in § 150.0(k)1C.
§ 150.0(k)1D:	**Electronic Ballasts for Fluorescent Lamps**. Ballasts for fluorescent lamps rated 13 watts or greater must be electronic and must have an output frequency no less than 20 kHz.
§ 150.0(k)1E:	**Night Lights, Step Lights, and Path Lights**. Night lights, step lights and path lights are not required to comply with Table 150.0-A or be controlled by vacancy sensors provided they are rated to consume no more than 5 watts of power and emit no more than 150 lumens.
§ 150.0(k)1F:	**Lighting Integral to Exhaust Fans**. Lighting integral to exhaust fans (except when installed by the manufacturer in kitchen exhaust hoods) must meet the applicable requirements of § 150.0(k).*
§ 150.0(k)1G:	**Screw based luminaires**. Screw based luminaires must contain lamps that comply with Reference Joint Appendix JA8.*
§ 150.0(k)1H:	**Light Sources in Enclosed or Recessed Luminaires**. Lamps and other separable light sources that are not compliant with the JA8 elevated temperature requirements, including marking requirements, must not be installed in enclosed or recessed luminaires.
§ 150.0(k)1I:	**Light Sources in Drawers, Cabinets, and Linen Closets**. Light sources internal to drawers, cabinetry or linen closets are not required to comply with Table 150.0-A or be controlled by vacancy sensors provided that they are rated to consume no more than 5 watts of power, emit no more than 150 lumens, and are equipped with controls that automatically turn the lighting off when the drawer, cabinet or linen closet is closed.
§ 150.0(k)2A:	**Interior Switches and Controls**. All forward phase cut dimmers used with LED light sources must comply with NEMA SSL 7A.
§ 150.0(k)2B:	**Interior Switches and Controls**. Exhaust fans must be controlled separately from lighting systems.*
§ 150.0(k)2C:	**Interior Switches and Controls**. Lighting must have readily accessible wall-mounted controls that allow the lighting to be manually turned ON and OFF.*
§ 150.0(k)2D:	**Interior Switches and Controls**. Controls and equipment must be installed in accordance with manufacturer's instructions.
§ 150.0(k)2E:	**Interior Switches and Controls**. Controls must not bypass a dimmer, occupant sensor, or vacancy sensor function if the control is installed to comply with § 150.0(k).
§ 150.0(k)2F:	**Interior Switches and Controls**. Lighting controls must comply with the applicable requirements of § 110.9.

§ 150.0(k)2G:	**Interior Switches and Controls.** An energy management control system (EMCS) may be used to comply with control requirements if it: provides functionality of the specified control according to § 110.9; meets the Installation Certificate requirements of § 130.4; meets the EMCS requirements of § 130.0(e); and meets all other requirements in § 150.0(k)2.
§ 150.0(k)2H:	**Interior Switches and Controls.** A multiscene programmable controller may be used to comply with dimmer requirements in § 150.0(k) if it provides the functionality of a dimmer according to § 110.9, and complies with all other applicable requirements in § 150.0(k)2.
§ 150.0(k)2I:	**Interior Switches and Controls.** In bathrooms, garages, laundry rooms, and utility rooms, at least one luminaire in each of these spaces must be controlled by an occupant sensor or a vacancy sensor providing automatic-off functionality. If an occupant sensor is installed, it must be initially configured to manual-on operation using the manual control required under Section 150.0(k)2C.
§ 150.0(k)2J:	**Interior Switches and Controls.** Luminaires that are or contain light sources that meet Reference Joint Appendix JA8 requirements for dimming, and that are not controlled by occupancy or vacancy sensors, must have dimming controls.*
§ 150.0(k)2K:	**Interior Switches and Controls.** Under cabinet lighting must be controlled separately from ceiling-installed lighting systems.
§ 150.0(k)3A:	**Residential Outdoor Lighting.** For single-family residential buildings, outdoor lighting permanently mounted to a residential building, or to other buildings on the same lot, must meet the requirement in item § 150.0(k)3Ai (ON and OFF switch) and the requirements in either § 150.0(k)3Aii (photocell and either a motion sensor or automatic time switch control) or § 150.0(k)3Aiii (astronomical time clock), or an EMCS.
§ 150.0(k)3B:	**Residential Outdoor Lighting.** For low-rise residential buildings with four or more dwelling units, outdoor lighting for private patios, entrances, balconies, and porches; and residential parking lots and carports with less than eight vehicles per site must comply with either § 150.0(k)3A or with the applicable requirements in Sections 110.9, 130.0, 130.2, 130.4, 140.7 and 141.0.
§ 150.0(k)3C:	**Residential Outdoor Lighting.** For low-rise residential buildings with four or more dwelling units, any outdoor lighting for residential parking lots or carports with a total of eight or more vehicles per site and any outdoor lighting not regulated by § 150.0(k)3B or § 150.0(k)3D must comply with the applicable requirements in Sections 110.9, 130.0, 130.2, 130.4, 140.7 and 141.0.
§ 150.0(k)4:	**Internally illuminated address signs.** Internally illuminated address signs must comply with § 140.8; or must consume no more than 5 watts of power as determined according to § 130.0(c).
§ 150.0(k)5:	**Residential Garages for Eight or More Vehicles.** Lighting for residential parking garages for eight or more vehicles must comply with the applicable requirements for nonresidential garages in Sections 110.9, 130.0, 130.1, 130.4, 140.6, and 141.0.
§ 150.0(k)6A:	**Interior Common Areas of Low-rise Multifamily Residential Buildings.** In a low-rise multifamily residential building where the total interior common area in a single building equals 20 percent or less of the floor area, permanently installed lighting for the interior common areas in that building must be comply with Table 150.0-A and be controlled by an occupant sensor.
§ 150.0(k)6B:	**Interior Common Areas of Low-rise Multifamily Residential Buildings.** In a low-rise multifamily residential building where the total interior common area in a single building equals more than 20 percent of the floor area, permanently installed lighting for the interior common areas in that building must: i. Comply with the applicable requirements in Sections 110.9, 130.0, 130.1, 140.6 and 141.0; and ii. Lighting installed in corridors and stairwells must be controlled by occupant sensors that reduce the lighting power in each space by at least 50 percent. The occupant sensors must be capable of turning the light fully on and off from all designed paths of ingress and egress.
Solar Ready Buildings:	
§ 110.10(a)1:	**Single Family Residences.** Single family residences located in subdivisions with 10 or more single family residences and where the application for a tentative subdivision map for the residences has been deemed complete and approved by the enforcement agency, which do not have a photovoltaic system installed, must comply with the requirements of § 110.10(b) through § 110.10(e).
§ 110.10(a)2:	**Low-rise Multifamily Buildings.** Low-rise multi-family buildings that do not have a photovoltaic system installed must comply with the requirements of § 110.10(b) through § 110.10(d).
§ 110.10(b)1:	**Minimum Solar Zone Area.** The solar zone must have a minimum total area as described below. The solar zone must comply with access, pathway, smoke ventilation, and spacing requirements as specified in Title 24, Part 9 or other parts of Title 24 or in any requirements adopted by a local jurisdiction. The solar zone total area must be comprised of areas that have no dimension less than 5 feet and are no less than 80 square feet each for buildings with roof areas less than or equal to 10,000 square feet or no less than 160 square feet each for buildings with roof areas greater than 10,000 square feet. For single family residences, the solar zone must be located on the roof or overhang of the building and have a total area no less than 250 square feet. For low-rise multi-family buildings the solar zone must be located on the roof or overhang of the building, or on the roof or overhang of another structure located within 250 feet of the building, or on covered parking installed with the building project, and have a total area no less than 15 percent of the total roof area of the building excluding any skylight area. The solar zone requirement is applicable to the entire building, including mixed occupancy.*
§ 110.10(b)2:	**Azimuth.** All sections of the solar zone located on steep-sloped roofs must be oriented between 90 degrees and 300 degrees of true north.
§ 110.10(b)3A:	**Shading.** The solar zone must not contain any obstructions, including but not limited to: vents, chimneys, architectural features, and roof mounted equipment.*
§ 110.10(b)3B:	**Shading.** Any obstruction located on the roof or any other part of the building that projects above a solar zone must be located at least twice the distance, measured in the horizontal plane, of the height difference between the highest point of the obstruction and the horizontal projection of the nearest point of the solar zone, measured in the vertical plane.*
§ 110.10(b)4:	**Structural Design Loads on Construction Documents.** For areas of the roof designated as a solar zone, the structural design loads for roof dead load and roof live load must be clearly indicated on the construction documents.
§ 110.10(c):	**Interconnection Pathways.** The construction documents must indicate: a location reserved for inverters and metering equipment and a pathway reserved for routing of conduit from the solar zone to the point of interconnection with the electrical service; and for single family residences and central water-heating systems, a pathway reserved for routing plumbing from the solar zone to the water-heating system.
§ 110.10(d):	**Documentation.** A copy of the construction documents or a comparable document indicating the information from § 110.10(b) through § 110.10(c) must be provided to the occupant.
§ 110.10(e)1:	**Main Electrical Service Panel.** The main electrical service panel must have a minimum busbar rating of 200 amps.
§ 110.10(e)2:	**Main Electrical Service Panel.** The main electrical service panel must have a reserved space to allow for the installation of a double pole circuit breaker for a future solar electric installation. The reserved space must be permanently marked as “For Future Solar Electric”.

Hi sir.
I got your email and I'll start addressing the issue tomorrow.
I'd like to petition the director as described in the attachment you sent. Do you know the best way to contact and petition this? I was told the office was closed due to COVID.
I'd appreciate any help you could give me. And again, I'm sorry to be taking up your time.

Dan Lichau

Good morning,

To facilitate application for the legalization of the addition, please see the analysis below:

1. Through Planning staff's research and analysis shows the unpermitted addition can be permitted. The building setback lines placed on the Final Map Supplemental sheet(s) are not enforceable.

2. The applicant will be required to submit plans and specifications adhering to the attached "As-Built" process: https://www.srcity.org/DocumentCenter/View/2199/-Handout-for-As-Built-Projects-PDF . The applicant will be required to pay additional fees due to the work without a permit. The fee shall be equal to the permit fee as described on the bottom of page 28 of the fee schedule: https://srcity.org/DocumentCenter/View/16129/Planning--Economic-Development-Department-Fee-Schedule?bidId= . They will also be required to pay the Stop Work Order Removal Fee identified on page 43 (near the middle of the page) "Removal of Stop Work Order".

3. Planning staff have determined that had the applicant applied: The tree that was removed without authorization would have been approved for removal in-accordance with the Tree Ordinance. In accordance with Subsection 17-24.050(C)(1), for each six inches or fraction thereof of the diameter of a tree which was approved for removal, two trees of the same genus and species as the removed tree (or another species, if approved by the Director), each of a minimum 15-gallon container size, shall be planted on the project site, provided however, that an increased number of smaller size trees of the same genus and species may be planted if approved by the Director, or a fewer number of such trees of a larger size if approved by the Director. Mr. Robertson's letter reports that the total diameter of the removed tree is 74 inches (48+26). Under this criteria, the mitigation requirement is planting of 26 Coast Redwood trees, each a minimum of 15-gallon container size (74 / 6 = 12.33 6-inch increments, which rounds up to 13 sections). In accordance with Subsection 17-24.050(C)(3), If the development site is inadequate in size to accommodate the replacement trees, the trees shall be planted on public property with the approval of the Director of the City's Recreation and Parks Department. Upon the request of the developer and the approval of the Director, the City may accept an in-lieu payment of $100.00 per 15-gallon replacement tree on condition that all such payments shall be used for tree-related educational projects and/or planting programs of the City. The total payment in-lieu fee would be $2,600.

4. The additional complaint for bright lights shining on adjacent properties will be required to be

addressed with the building permit submittal.

Steps:

1. Prepared a compete submittal utilizing any and all necessary documents sent to you here – following the "as-built" process: https://www.srcity.org/DocumentCenter/View/2199/-Handout-for-As-Built-Projects-PDF and the addition/alteration guidance: https://www.srcity.org/DocumentCenter/View/18246/Construction-Documents-Submittal-Requirements-for-Remodel-and-or-Additions-to-Residential-Projects (since electronic submittals are required – disregard the # of plan sets required).
2. Complete and submit a building permit application: https://www.srcity.org/DocumentCenter/View/2614/Building-Permit-Application-PDF
3. Address the additional lights installed that potentially shine on any neighboring properties
4. Include this email in the submittal
5. Submit to" permitsubmittal@srcity.org If submittals exceed 15mB – provide a drop box or file transfer mechanism.

Good morning,

1. Planning has made the decision to move forward with review of the appeal.

2. I don't understand your question about if I "will respond to an email request for documentation provided by the appellant/information in the project file. Are we able to get this before the 2/11, assuming you've received documentation from the appellant other than the initial appeal and amended appeal applications that we already have?" Any information provided to the City, including email conversations between City staff and the public, is public record and if disclosable would be provided in response to a Public Records Request. You can submit a Public Records request at any time using the City's Public Records Request portal. The City has staff who respond to requests for public records. In the request, you can make the scope of the request as narrow as you like. To-date, the City has not received any information in addition to the Appeal Application and amended Appeal Application received in December 2020.

Does this help?

Andrew

Good morning Andrew,

Thank you for your email. Are you able to give us clarification on whether the appeal will move forward on the scheduled date because you've received confirmation from the appellant that she will be present and will have her documentation in, or if planning has made the decision to move forward with the appeal whether the appellant is available or not?

Secondly, it's my understanding that you will respond to an email request for documentation provided by the appellant/information in the project file. Are we able to get this before the 2/11, assuming you've received documentation from the appellant other than the initial appeal and amended appeal applications that we already have?

Thanks so much for your time.

Sincerely,

Amber and Daniel

Good afternoon,

Planning Commission will review an Appeal of Director determinations made during Planning Review of Building Permit B20-6871, which is an application to legalize an addition to an existing residence at 1900 Brush Creek Road, during its regularly scheduled public meeting on Thursday, February 25, 2021, at or after 4:00 PM. This public meeting will be a virtual Zoom public meeting. Both the property owner and the appellant will have the opportunity to speak during review of the Appeal.

Information about the scheduled Planning Commission public meeting, including accessing the meeting via Zoom, will be available at https://srcity.org/1339/Planning-Commission. The staff report and associated information will be published for public review at least 7 days prior to the meeting. I will email the agenda when it is published.

Best Regards,

Andrew
