

Additional Changes to Draft Noise and Safety Element – July 7, 2014

- NS-G-2 Require new development in Wildland-Urban Interface areas to utilize fire-resistant building materials. Require the use of on-site fire suppression systems, including enhanced automatic sprinklers systems, smoke and/ or detection systems, buffers and fuel breaks, and fire ~~retardant~~ resistant landscaping. Require development and ongoing implementation of vegetation management plans to reduce the risk of wildland fires and to help prevent fires from spreading.
- NS-G-5 Require detailed fire prevention and control measures, including community ~~fire~~ fuel breaks, for development projects in the Wildland-Urban Interface, including very high fire hazard severity zones.

Figure 12-5

Fire Hazard Zones

- Very High Fire Hazard Severity Zones
- Wildland-Urban Interface Zones

Source: Cal Fire for Very High Severity Zone and City of Santa Rosa for Wildland-Urban Interface Zone

Facilities

- Emergency Operations Center
- Emergency Hospital
- Existing Fire Station
- Existing Station to be Relocated
- Future Fire Station

Existing/Proposed

- Highway
- Regional/Arterial Street
- Transitional/Collector Street
- Conceptual Local Street
- Planning Area
- Urban Growth Boundary
