Bay Area Air Quality Management District

Roadway Screening Analysis Calculator

County specific tables containing estimates of risk and hazard impacts from roadways in the Bay Area.

INSTRUCTIONS:

Input the site-specific characteristics of your project by using the drop down menu in the "Search Parameter" box. We recommend that this analysis be used for roadways with 10,000 AADT and above.

• County: Select the County where the project is located. The calculator is only applicable for projects within the nine Bay Area counties.

• Roadway Direction: Select the orientation that best matches the roadway. If the roadway orientation is neither clearly north-south nor east-west, use the highest values predicted from either orientation.

• Side of the Roadway: Identify on which side of the roadway the project is located.

• Distance from Roadway: Enter the distance in feet from the nearest edge of the roadway to the project site. The calculator estimates values for distances greater than 10 feet and less than 1000 feet. For distances greater than 1000 feet, the user can choose to extrapolate values using a distribution curve or apply 1000 feet values for greater distances.

• Annual Average Daily Traffic (ADT): Enter the annual average daily traffic on the roadway. These data may be collected from the city or the county (if the area is unincorporated).

When the user has completed the data entries, the screening level PM2.5 annual average concentration and the cancer risk results will appear in the Results Box on the right. Please note that the roadway tool is not applicable for California State Highways and the District refers the user to the Highway Screening Analysis Tool at: http://www.baaqmd.gov/Divisions/Planning-and-Research/CEQA-GUIDELINES/Tools-and-Methodology.aspx.

Notes and References listed below the Search Boxes

NORTH-SOUTH DIRECTIONAL ROADWAY

PM2.5 annual average

0.453 ($\mu g/m^3$)

Cancer Risk

17.45 (per million)

Data for Sonoma County based on meteorological data collected from Santa Rosa in 2005

Notes and References:

1. Emissions were developed using EMFAC2011 for fleet mix in 2014 assuming 10,000 AADT and includes impacts from diesel and gasoline vehicle exhaust, brake and tire wear, and resuspended dust.
2. Roadways were modeled using CALINE4 air dispersion model assuming a source length of one kilometer. Meteorological data used to estimate the screening values are noted at the bottom of the "Results" box.
3. Cancer risks were estimated for 70 year lifetime exposure starting in 2014 that includes sensitivity values for early life exposures and OEHHA toxicity values adopted in 2013.

Adjusted cancer risk calculation: 17.45 x 1.3744 = 23.98 (per million)

The cancer risk calculated estimated using the BAAQMD Roadway Screening Analysis Calculator was adjusted by a correction factor of 1.3744 to incorporate the latest OEHHA guidance. Source of 1.3744 correction factor: BAAQMD recommendation confirmed through personal communication with BAAQMD Environmental Planner, Areana Flores, on January 8, 2020.

Stonebridge Project Solar Calculation

MINIMUM REQUIREMENTS FOR SINGLE-FAMILY HOMES AS PER TITLE 24, PART 6

		Unit	*Source*
Climate zone	4		*a.*
Low Square Footage	1583	Sq. Ft	
High Square Footage	1298	Sq. Ft	
Average Square Footage	1441	Sq. Ft	
CFA*	2,273	Sq. Ft	
A	0.586		*a.*
NDwell	105	No.	
B	1.21		*a.*
Annual Photvoltaic Electric Output	128.38	kW	
kW size per Dwell	**1.22**	kW	
Energy production factor**	1800	kWh/kW-year	*b.*
Estimated kWh per year per system	2200.83	kWh/year	
Total kWh generated per year	**231,087.56**	kWh/year	

$kW_{PV} = (CFA \times A)/1000 + (NDwell \times B)$

WHERE:

kW_{PV} = kWdc size of the PV system

CFA = Conditioned floor area

NDwell = Number of dwelling units

A = Adjustment factor from Table 150.1-C

B = Dwelling adjustment factor from Table 150.1-C

W = watt; kW = kilo watt; kWh = kilo-watt hour; Sq. Ft = square feet

* Conditioned floor area (CFA) is the total floor area (in square feet) of enclosed conditioned space on all floors of a building, as measured at the floor level of the exterior surfaces of exterior walls enclosing the conditioned space

CFA value listed above is based on high square footage estimate of floor plan range, consistent with construction assumptions.

** Energy production factor based on U.S. Department of Energy, Energy Efficiency and Renewable Energy: A Consumer's Guide Get Your Power from the Sun: https://www.nrel.gov/docs/fy04osti/35297.pdf; pdf page 12

1.8 Conditioned Floor Area

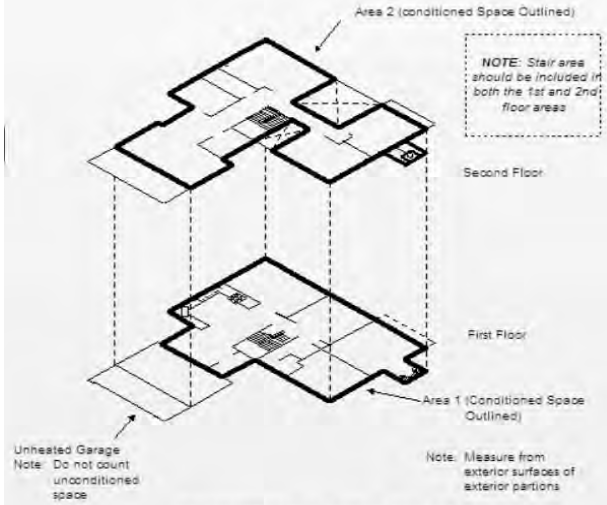
Conditioned floor area (CFA) is the total floor area (in square feet) of enclosed conditioned space on all floors of a building, as measured at the floor level of the exterior surfaces of exterior walls enclosing the conditioned space. [§100.1] This term is also referred to in the Energy Standards simply as the floor area.

This is an important value for compliance since annual energy use is divided by this value to obtain the energy budget. In the prescriptive package, the maximum fenestration and west facing fenestration area requirements are expressed as a percentage of this value.

CFA is calculated from the plan dimensions of the building, including the floor area of all conditioned and indirectly conditioned space on all floors. It includes lofts and mezzanines but does not include covered walkways, open roofed-over areas, porches, pipe trenches, exterior terraces or steps, chimneys, roof overhangs, or parking garages. Unheated basements or closets for central gas forced air furnaces are also not included, unless shown to be indirectly conditioned.

The floor area of an interior stairway is determined as the CFA beneath the stairs and the tread area of the stairs themselves. See figure 1-2 below for an example of how CFA is calculated.

Figure 1-2: Total Conditioned Floor Area



Stonebridge Project Trip Generation

As per Traffic Impact Study*		Unit
Number of Dwellings:	120	dwelling units
Proposed Trips:	1,133	trips
Trip Generation Rate:	9.44	trips per dwelling unit

For Air Quality Analysis		
Number of Dwellings:	105	dwelling units
Trips:	1,133	trips
Trip Generation Rate:	10.79	trips per dwelling unit

*Source: W-Trans. 2019. Traffic Impact Study for the 2220 Fulton Road Project. October 22.
Note: The project would develop 105 single-family residential units. The Traffic Impact Study prepared for the project considered 120 single-family residential units for analysis of traffic-related impacts. To be consistent with the project-specific Traffic Impact Study, the total trips generated by 120 units was used to estimate emissions presented in the air quality analysis. Consistent with the Project Description, all other assumptions and analysis for air quality considers 105 single-family residential units. The use of total trips estimated for 120 single-family residential units represents a conservative approach to estimating emissions from operations of the project.

1. INTRODUCTION

Monk & Associates, Inc. (M&A) has prepared this *Biological Resources Analysis – 2220 Fulton Road, Santa Rosa, California* ("Biological Resources Report") for the proposed Stonebridge development ("Proposed Project") located at 2220 Fulton Road in Santa Rosa, California with Assessor's Parcel Number 034-303-070 ("Proposed Project Site"). The Applicant is Woodside Holdings LLC. The purpose of M&A's analysis is to provide a description of existing biological resources on the Proposed Project Site and to identify potentially significant impacts to sensitive biological resources that could occur from the construction of a proposed residential development.

Biological resources include common plant and animal species, and special-status plants and animals as designated by the U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW), National Marine Fisheries Service (NMFS), and other non-agency resource organizations such as the California Native Plant Society. Biological resources also include waters of the United States and State, as regulated by the U.S. Army Corps of Engineers (Corps), California Regional Water Quality Control Board (RWQCB), and CDFW.

This Biological Resources Report also provides mitigation measures for "potentially significant" and "significant" impacts that could occur to biological resources from implementation of the Proposed Project. Whenever possible, implementation of the prescribed mitigation measures would reduce impacts to these resources to levels considered less than significant pursuant to the California Environmental Quality Act (CEQA) (Pub. Resources Code §§ 21000 et seq.; 14 Cal. Code Regs §§ 15000 et seq). Accordingly, this Biological Resources Report is suitable for review and inclusion in any review being conducted by the City of Santa Rosa for the Proposed Project pursuant to the CEQA.

2. PROPERTY LOCATION AND SETTING

The Proposed Project Site (Figures 1-3) is located on the east side of Fulton Road within a geographic area designated as the Santa Rosa Plain. The habitat on the Proposed Project Site includes upland annual grasslands and seasonal wetlands. Trees have been planted along the east property line and around an old residence. One residence and a few associated outbuildings are present on the site; the residence is currently occupied.

2.1 Land Use History

The Proposed Project Site is a rural residential property that has been occupied since the 1940s. Currently, the tenants have established a garden and use several residential outbuildings. The residence is accessed off Fulton Road via a hardscaped (gravel-surfaced) driveway with multiple graveled parking areas onsite. The residential area is well-maintained and all ruderal (weedy) habitats around the residence are regularly mowed. Currently, the eastern three-quarters of the property is mowed annually to reduce risk of fire. Historical fill in the southeast corner of the site suggests that structures may have once been present there. Planted trees (two rows) and scattered fruit trees visible on the 1942 aerial photograph, which is available online through the Sonoma County Vegetation Mapping and Lidar Project, indicate that an orchard may once have been planted in the northeast half of the site but has long been abandoned.

3. PROPOSED PROJECT

The Applicant is proposing to subdivide the 28.60-acre Proposed Project Site into two separate parcels, including:

1. A residential subdivision of approximately 14.60 acres, where construction of 105 lots for single-family homes is being proposed (Attachment A: Site Plan) and
2. A habitat preserve of approximately 14.00 acres where wetlands will be enhanced and created (also shown on Attachment A).
3. New wetlands and enhanced wetlands within the proposed Stonebridge Preserve will be constructed as a restoration component of the Proposed Project.
4. The Stonebridge Preserve wetlands will be enhanced to promote Burke's goldfield colonization. This meets the preservation enhancement objectives set forth in the USFWS' *2016 Recovery Plan for the Santa Rosa Plain* as the Proposed Project Site and Stonebridge Preserve are located within the *Lasthenia burkei* (Burke's goldfields) "Alton Lane Core Area."
5. The proposed wetland enhancement and creation proposal has been reviewed by both USFWS and CDFW and these agencies agree that the enhancement/restoration plan meets their requirements for Burke's goldfields mitigation.
6. The Proposed Project proposes to mitigate impacts to potential California tiger salamander migration/dispersal habitat in accordance with USFWS' mitigation requirements applied to other projects in the Santa Rosa Plain. Mitigation at a 1:1 (impacts to replacement) ratio is warranted for impacts to USFWS-designated California tiger salamander migration/ dispersal habitat since the project site is between 2,200 feet and 1.3 miles of the closest known California tiger salamander breeding site, which is the Alton Lane Mitigation Site, approximately 2,230 feet west of the project site.
7. A California tiger salamander pitfall trapping study is currently underway on the Proposed Project Site and will be followed by a larval dip-netting survey in spring of 2020 (a "protocol study"). If the California tiger salamander is identified on the project site during completion of the protocol study, additional mitigation would be warranted as detailed in the "Impacts and Mitigations Section" of this report.

4. ANALYSIS METHODS

Prior to preparing this Biological Resource Report,

1. M&A researched the most recent version of CDFW's Natural Diversity Database (CNDDB 2019) for historic and recent records of special-status plant and animal species (i.e., threatened, endangered, rare) known to occur in the region of the Proposed Project Site.
2. M&A also searched the 2019 electronic version of the California Native Plant Society's (CNPS) *Inventory of Rare and Endangered Plants of California* (CNPS 2001) for records of special-status plants known in the region of the Proposed Project Site.
3. M&A biologists and project team members met with CDFW personnel and USFWS personnel on several occasions to discuss these agencies' concerns regarding the Proposed Project's effects on sensitive resources. All special-status species records were compiled in tables. M&A examined all known special-status species record locations to

determine if they occurred on the Proposed Project Site or within a zone of influence of the Proposed Project Site.

4. M&A biologists Mr. Geoff Monk, Ms. Hope Kingma, and Ms. Sharon Dulava conducted a general survey of the Proposed Project Site on April 25, 2018 to record biological resources and to assess the likelihood of resource agency regulated areas on the Proposed Project Site. The survey involved searching all habitats on the site and recording all plant and wildlife species observed.
5. M&A cross-referenced the habitats found on the Proposed Project Site against the habitat requirements of local or regionally known special-status species to determine if the Proposed Project could directly or indirectly impact such species.
6. After conducting background research and a field reconnaissance, M&A determined that follow-up surveys for special-status plants and California tiger salamander (*Ambystoma californiense*) larvae would be necessary to address the effects of the project on such species.
7. Finally, CDFW requested that the applicant perform a "protocol" California tiger salamander survey since there are seasonal wetlands on the Proposed Project Site. A formal larval survey was conducted in the spring of 2019, and a pitfall trapping study is underway and will be completed on the Proposed Project Site through March 15, 2020. A second year of larval surveys will be conducted on the project site in the spring of 2020. The results of all surveys will be reported to CDFW and USFWS.

The methods used to conduct these surveys are presented in Sections 7.1 and 7.2 below, respectively. The results of our literature research and all survey findings are provided in the sections below.

5. EXISTING CONDITIONS

5.1 Topography and Drainage

The Proposed Project Site is relatively flat, except for where depressional wetland habitat is present. The elevation over most of the site ranges from approximately 138 feet in depressional wetlands and natural drainages to 142 feet in the eastern two-thirds of the property. The total difference in elevation is approximately four feet. The storm-related drainage patterns on the site are complex and have been modified over the years by adjacent housing developments immediately north and south of the Proposed Project Site.

Mainly, there are two primary watersheds on the Proposed Project Site, one that flows westward toward Fulton Road, and one that flows southward toward the Montage II housing development on the south side of the site. Between these watersheds there is a break in flow directions that was used to help select the two development areas of the Proposed Project Site: the Stonebridge Residential Development area and the Stonebridge Preserve area. *This watershed break was confirmed in the field by the Corps when they confirmed the extent of their jurisdiction on the Proposed Project Site.* The western watershed is proposed to be developed into the residential subdivision ("Stonebridge Residential Site"), while the eastern watershed is proposed to be restored to inure to the benefit of wetlands and rare vernal pool plant species ("Stonebridge Preserve").

The Proposed Project Site supports eight small "micro" watersheds (Stromberg 2018, Attachment B), all but one of which are drained by a swale or swale networks, and nearly all of which reflect the natural topography. The one exception is the watershed in the southwest corner of the site where construction of a driveway, parking areas, a residence, gardens, and several outbuildings long ago removed drainage patterns on this portion of the Proposed Project Site (see micro-watershed 8 on Attachment B).

The natural flow of stormwater from the western half of the Proposed Project Site northward was blocked in circa 2005 when the high-density residential Woodbridge Development was constructed on the northwest border of the Proposed Project Site. Before the Woodbridge residential subdivision was constructed, stormwater flowed from a micro-watershed on the western half of the Proposed Project Site to the headwaters of Abramson Creek. This hydrology connection on the Proposed Project Site is now blocked by the high-density residential Woodbridge Development.

Another micro-watershed occurs on the eastern half of the Proposed Project Site, which historically drained off the project site to the south eventually connecting with the Peterson Creek watershed. Within the eastern area of the Proposed Project Site the largest swale/micro-watershed flows to a Sonoma County storm drain inlet at the edge of the Montage II housing development located immediately south of the Proposed Project Site.

Another swale on the eastern portion of the site flows south and terminates against a retaining wall that supports the raised building pad elevation of a portion of the Montage II subdivision. This swale blockage now results in seasonal pooling (up to 24 inches deep) on the southeastern edge of the site.

5.2 Soils

The soils on the Proposed Project Site, mapped by the Natural Resource Conservation Service (NRCS), are the Huichica loam series and Clear Lake clay series (Figure 4). They are as follows:

1. In the northern central and northeastern corner of the site the soils are Clear Lake clay.

2. In the southern half of the site the soils are Huichica loam, 0-2 percent slopes, and

3. In the northwestern corner and southeastern corner they are Huichica loam, ponded, 0 to 5 percent slopes. The Huichica soils possess a clay horizon at a depth of about two feet and a cemented hardpan below the clay. Together, they form a barrier to deep percolation and result in perched stormwater at or near the surface.

5.3 Plant Communities and Associated Wildlife Habitats

A complete list of plant species observed on the Proposed Project Site is presented in Table 1. Nomenclature used for plant names follows *The Jepson Manual* Second Edition (Baldwin 2012) and changes made to this manual as published on the Jepson Interchange Project website (http://ucjeps.berkeley.edu/interchange/index.html). Table 2 is a list of wildlife species observed

on the Proposed Project Site. Nomenclature for wildlife follows CDFW's *Complete list of amphibian, reptile, bird, and mammal species in California* (2016) and any changes made to species nomenclature as published in scientific journals since the publication of CDFW's list.

The following descriptions of the Proposed Project Site's plant communities and landscape areas were taken from Dr. Stromberg's report: *Results of Multi-year Survey for Special-status Plant Species, Woodside Holdings Property (APN 034-043-070) Santa Rosa, California* (March 30, 2018) (Attachment C). Additional plant species observed by M&A during our 2018 and 2019 surveys are also included below and in Table 1. Wildlife habitat descriptions provided below are based on M&A's site surveys and years of experience working on properties in the Santa Rosa Plain.

5.3.1 SEASONAL WETLANDS

The wetlands on the Proposed Project Site are palustrine emergent wetlands, as classified by the Corps using the Cowardin "method" (Cowardin et al 1979). According to the California Rapid Assessment Method (CRAM) (California Wetlands Monitoring Workgroup 2013: *In* Stromberg 2018b; Attachment C), the wetlands on the Proposed Project Site would be considered a vernal pool system. A CRAM assessment has not been conducted. The area of seasonal wetland on the entire Proposed Project Site is approximately 6.31 acres. The wetlands are a mosaic of vernal pools connected by swales. The maximum depth of standing water in the vernal pools ranges from six inches to more than 24 inches. In the bottoms of vernal pools and the deeply inundated swales (characterized by local high points that cause water to collect upgradient), the dominant and common species include California semaphore grass (*Pleuropogon californicus*), meadow barley (*Hordeum brachyantherum*), curly dock (*Rumex crispus*), smooth goldfields (*Lasthenia glaberrima*), pennyroyal (*Mentha pulegium*), and coyote thistle (*Eryngium aristulatum*).

The vegetation at the wetland margins is typically indicative of the transition into upland habitat. Dominant and common plant species at the margins include perennial ryegrass (*Festuca perennis*), Mediterranean barley (*Hordeum marinum gussoneanum*), bristly ox tongue (*Helminthotheca echioides*), prickly lettuce (*Lactuca serriola*), and sheep sorrel (*Rumex acetosella*). Upland plant species that occur at the wetland margins include Harding grass (*Phalaris aquatica*), pea (*Lathyrus cicera*), medusahead (*Elymus caput-medusae*), common vetch (*Vicia sativa*), rough cat's ear (*Hypochaeris radicata*), hedge bindweed (*Convolvulus arvensis*), soft chess (*Bromus hordeaceus*), and cutleaf geranium (*Geranium dissectum*).

Seasonal wetlands provide wildlife with a seasonal water source that allows animals to drink and forage in the water during the winter and spring months and, so long as the water lasts, into the early summer. Common amphibians lay their eggs in seasonal wetland habitats and complete much of their life cycle in the wetlands. Invertebrates such as mayflies (Ephemeroptera), damselflies (Odonata), and predaceous diving beetles (Dytiscidae) are commonly associated with inundated seasonal wetland habitats and complete their life cycle in the wetlands.

Wildlife observed using these wetlands during the 2018 terrestrial surveys and 2019 larval amphibian surveys included black phoebe (*Sayornis nigricans*), Sierran tree frog (*Pseudacris sierra*), and common invertebrates such as, scuds (Amphipods), water boatman (Corixidae), and predaceous diving beetles (Dytiscidae). No special-status animals or invertebrates were

identified in the Proposed Project Site's existing wetlands. More in-depth discussions of wildlife and the wetlands are provided in the "Special-Status Animals," California tiger salamander discussion below.

5.3.2 Upland Annual Grassland

The upland annual grassland is dominated by non-native annuals, and introduced perennials, and naturalized species. The dominant and more common species include slender oats (*Avena barbata*), hare barley (*Hordeum murinum* ssp. *leporinum*), subterranean clover (*Trifolium subterraneum*), vernal grass (*Anthoxanthum aristatum*), perennial ryegrass *(Festuca perennis*), six-weeks fescue (*Festuca bromoides*), soft chess (*Bromus hordeaceus*), shamrock clover (*Trifolium dubium*), several species of vetch (*Vicia sativa*, *V. cracca*, *V. villosa varia*), sheep sorrel, and cut-leaf geranium. Less common species include rip-gut brome (*Bromus diandrus*), hedge bindweed *(Convolvulus arvensis)*, bristly ox-tongue (*Helminthotheca echioides*), prickly lettuce (*Lactuca serriola*), several species of filaree (*Erodium cicutarium*, *E. botrys, E. moschatum*), rough and smooth cat's ear (*Hypochaeris radicata* and *H. glabra*), California poppy (*Eschscholzia californica*), sun cups (*Taraxia ovata*), toad rush (*Juncus bufonius*), capitate rush (*Juncus capitatus*), bird's foot trefoil (*Lotus corniculatus*), wooly trefoil (*Acmispon brachycarpus*), medusahead grass, willow herb (*Epilobium brachycarpum*), mouse-ear chickweed (*Cerastium glomeratum*), and miniature lupine (*Lupinus bicolor*).

The Proposed Project Site's upland supports annual grasses and forbs (broad-leaved plants) that provide a food source for graniverous (seed-eating) birds including mourning dove (*Zenaida macroura*), song sparrow (*Melospiza melodia*), house finch (*Haemorhous mexicanus*), and lesser goldfinch (*Carduelis psaltria*). Insectivorous birds such as Say's phoebe (*Sayornis saya*), American pipit (*Anthus rubescens*), violet green swallow (*Tachycineta thalassina*), and western meadow lark (*Sturnella neglecta*) find insects to eat in the grassland. Other animals observed in the grassland included Botta's pocket gopher (*Thomomys bottae*) and California meadow vole (*Microtus californicus*).

5.3.3 Woody Vegetation/Landscape Trees

Walnut trees (*Juglans* spp.), fruit trees (*Prunus* spp.), a single, multi-trunked coast live oak (*Quercus agrifolia*) or coast live oak-interior live oak hybrid, a pine (*Pinu*s sp.), a Monterey cypress (*Hesperocyparis macrocarpa*), and ornamental shrubs have been planted around the residence and associated outbuildings in the western part of the Proposed Project Site. A string of eucalyptus trees (*Eucalyptus globulus*) has also been planted just inside the eastern property line. A small amount of coyote brush (*Baccharis pilularis* ssp. *consanguine*a) shrubs and eight small, ornamental fruit trees (*Prunus* spp.) are also scattered across the eastern third of the site, apparent holdovers of an orchard, the remnants of which (two rows) are visible on the 1942 aerial photograph that is available through the online Sonoma County Vegetation Mapping and Lidar Project. Apparently, all but eight trees had been removed prior to 1942.

Scattered trees in a rural residential setting such as the Proposed Project Site provide nesting habitat for passerine birds (that is, perching birds, also known as song birds) such as mourning dove, California scrub jay (*Aphelocoma californica*), Anna's hummingbird (*Calypte anna*), and northern mockingbird (*Mimus polyglottos*), as well as other urban-adapted bird species, and

roosting habitat for a variety of smaller raptors (birds of prey) such as the sharp-shinned hawk (*Accipiter striatus*) which may hunt in the area though is unlikely to nest onsite due to an absence of suitable nesting habitat (the sharp-shinned hawk nests in riparian woodlands). The fruit trees provide food for common, urban-adapted mammals such as the Virginia opossum (*Didelphis virginiana*), striped skunk (*Mephitis mephitis*), and raccoon (*Procyon lotor*). Coyote brush that occurs on the Proposed Project Site also provides nesting opportunities for passerine birds and cover for small mammals and reptiles.

5.4 Wildlife Corridors

Wildlife corridors are linear and/or regional habitats that provide connectivity to other natural vegetation communities within a landscape fractured by urbanization and other development. Wildlife corridors have several functions: 1) they provide avenues along which wide-ranging animals can travel, migrate, and breed, allowing genetic interchange to occur; 2) populations can move in response to environmental changes and natural disasters; and 3) individuals can recolonize habitats from which populations have been locally extirpated (Beier and Loe 1992). All three of these functions can be met if both regional and local wildlife corridors are accessible to wildlife. Regional wildlife corridors provide foraging, breeding, and retreat areas for migrating, dispersing, immigrating, and emigrating wildlife populations. Also, local wildlife corridors within restricted habitats provide access routes to food, cover, and water resources.

Properties located within suburban settings such as the Proposed Project Site typically provide the greatest wildlife corridor function if there is a creek or other heavily vegetated corridor running through the property that connects with other open spaces. No such drainage or vegetated corridor exists on the Proposed Project Site.

The Proposed Project Site is an open grassland with a seasonal wetland habitat that is surrounded by developed properties on three sides (to the north, south, and east). Though there are some small parcels to the northeast and east that are either designated open space (the CDFW-owned Woodbridge Preserve) or currently undeveloped (the Kerry Ranch parcels), these properties abut densely developed lands and do not provide a large swath of contiguous, open land that functions as a wildlife movement corridor. To the immediate west of the Proposed Project Site is Fulton Road, a heavily traveled and highly trafficked road. With over 19,000 vehicle trips a day (data from between Piner and Piner High School, April 28, 2015 - Pacific Traffic & Transit Data Services), Fulton Road is a significant geographical impediment to wildlife movements and removes any wildlife corridor function/value to wildlife originating west of the Proposed Project Site.

6. SPECIAL-STATUS SPECIES DEFINITION

6.1 Definitions

For purposes of this analysis, special-status species are plants and animals that are legally protected under the California and Federal Endangered Species Acts (CESA and FESA, respectively) or other regulations, and species that are considered rare by the scientific community (for example, CNPS). Special-status species are defined as:

- plants and animals that are listed or proposed for listing as threatened or endangered under the CESA (Fish and Game Code §2050 *et seq.*; 14 CCR §670.1 *et seq.*) or the FESA (50 CFR 17.12 for plants; 50 CFR 17.11 for animals; various notices in the Federal Register [FR] for proposed species);

- plants and animals that are candidates for possible future listing as threatened or endangered under the FESA (50 CFR 17; FR Vol. 64, No. 205, pages 57533-57547, October 25, 1999); and under the CESA (California Fish and Game Code §2068);

- plants and animals that meet the definition of endangered, rare, or threatened under the California Environmental Quality Act (CEQA) (14 CCR §15380) that may include species not found on either State or Federal Endangered Species lists;

- Plants occurring on Ranks 1A, 1B, 2A, 2B, 3, and 4 of CNPS' electronic *Inventory* (CNPS 2001). The CDFW recognizes that Ranks 1A, 1B, 2A and 2B of the CNPS inventory contain plants that, in the majority of cases, would qualify for State listing, and CDFW requests their inclusion in Environmental Impact Reports (EIRs). Plants occurring on CNPS Ranks 3 and 4 are "plants about which more information is necessary," and "plants of limited distribution," respectively (CNPS 2001). Such plants may be included as special-status species on a case by case basis due to local significance or recent biological information (more on CNPS Rank species below);

- migratory nongame birds of management concern listed by U.S. Fish and Wildlife Service (Migratory Nongame Birds of Management Concern in the United States: The list 1995; Office of Migratory Bird Management; Washington D.C.; Sept. 1995);

- animals that are designated as "species of special concern" by CDFW (2019);

- Animal species that are "fully protected" in California (Fish and Game Codes 3511, 4700, 5050, and 5515).

- Bat Species that are designated on the Western Bat Working Group's (WBWG) Regional Bat Species Priority Matrix as: "RED OR HIGH." This priority is justified by the WBWG as follows: "Based on available information on distribution, status, ecology, and known threats, this designation should result in these bat species being considered the highest priority for funding, planning, and conservation actions. Information about status and threats to most species could result in effective conservation actions being implemented should a commitment to management exist. These species are imperiled or are at high risk of imperilment."

In the paragraphs below M&A provides further definitions of legal status as they pertain to the special-status species discussed in this report or in the attached tables.

Federal Endangered or Threatened Species. A species listed as Endangered or Threatened under the FESA is protected from unauthorized "take" (that is, harass, harm, pursue, hunt, shoot,

trap) of that species. If it is necessary to take a Federal listed Endangered or Threatened species as part of an otherwise lawful activity, it would be necessary to receive permission from the USFWS prior to initiating the take.

State Threatened Species. A species listed as Threatened under the state Endangered Species Act (§2050 of California Fish and Game Code) is protected from unauthorized "take" (that is, harass, pursue, hunt, shoot, trap) of that species. If it is necessary to "take" a state listed Threatened species as part of an otherwise lawful activity, it would be necessary to receive permission from CDFW prior to initiating the "take."

California Species of Special Concern. These are species in which their California breeding populations are seriously declining and extirpation from all or a portion of their range is possible. This designation affords no legally mandated protection; however, pursuant to the CEQA Guidelines (14 CCR §15380), some species of special concern could be considered "rare." Pursuant to its rarity status, any unmitigated impacts to rare species could be considered a "significant effect on the environment" (§15382). Thus, species of special concern must be considered in any project that will, or is currently, undergoing CEQA review, and/or that must obtain an environmental permit(s) from a public agency.

CNPS Rank Species. The CNPS maintains an "Inventory" of special status plant species. This inventory has four lists of plants with varying rarity. These lists are: Rank 1, Rank 2, Rank 3, and Rank 4. Although plants on these lists have no formal legal protection (unless they are also state or federal listed species), CDFW requests the inclusion of Rank 1 species in environmental documents. In addition, other state and local agencies may request the inclusion of species on other lists as well. The Rank 1 and 2 species are defined below:

- Rank 1A: Presumed extinct in California;
- Rank 1B: Rare, threatened, or endangered in California and elsewhere;
- Rank 2A: Plants presumed extirpated in California, but more common elsewhere;
- Rank 2B: Rare, threatened, or endangered in California, but more common elsewhere.

All of the plants constituting Rank 1B meet the definitions of Section 1901, Chapter 10 (Native Plant Protection Act) or Sections 2062 and 2067 (California Endangered Species Act) of the Fish and Game Code and are eligible for state listing (CNPS 2001). Rank 2 species are rare in California, but more common elsewhere. Ranks 3 and 4 contain species about which there is some concern and are reviewed by CDFW and maintained on "watch lists."

Additionally, in 2006 CNPS updated their lists to include "threat code extensions" for each list. For example, Rank 1B species would now be categorized as Rank 1B.1, Rank 1B.2, or Rank 1B.3. These threat codes are defined as follows:

- .1 is considered "seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat)";
- .2 is "fairly endangered in California (20-80% of occurrences threatened)";
- .3 is "not very endangered in California (less than 20% of occurrences threatened or no current threats known)."

Under the CEQA review process only CNPS Rank 1 and 2 species are considered since these are the only CNPS species that meet CEQA's definition of "rare" or "endangered." Impacts to Rank 3 and 4 species are not regarded as significant pursuant to CEQA.

Fully Protected Birds. Fully protected birds, such as the white-tailed kite and golden eagle, are protected under California Fish and Game Code (§3511). Fully protected birds may not be "taken" or possessed (i.e., kept in captivity) at any time.

7. SPECIAL-STATUS PLANTS AND ANIMALS

A complete list of plant species observed on the Proposed Project Site by both M&A biologists during 2018-2019 special-status plant surveys and by Dr. Larry Stromberg during multiple years of special-status plant surveys is attached as Table 1. A list of wildlife observed by M&A on the Proposed Project Site during April 2018, and April and May 2019, site surveys is provided as Table 2.

7.1 Potential Special-Status Plants on the Proposed Project Site

Figure 5 provides a graphical illustration of the closest known records for special-status species within two miles of the Proposed Project Site and helps readers visually understand the number of sensitive species that occur in the vicinity of the Proposed Project Site. The Proposed Project Site has undergone multiple years of special-status plant surveys exceeding Corps, CDFW, and USFWS policies that require two years of special-status plant surveys prior to the time a project is permitted to impact seasonal wetlands. Special-status plant surveys were conducted by Laurence P. Stromberg, Ph.D. in 2015, 2016, and 2017 (Attachment C, *Results of Multi-Year Survey for Special-Status Plant Species* prepared by Laurence P. Stromberg, Ph.D., dated March 30, 2018), with an additional survey conducted on April 29, 2019 to re-verify the location of Burke's goldfields (*Lasthenia burkei*) that was previously identified onsite. M&A biologists have also conducted special-status plant surveys on the Proposed Project Site. These surveys were conducted on April 25, 2018, and May 7 and 21, 2019. The May 2019 surveys follow Dr. Stromberg's April 2019 survey for a total of three consecutive surveys in 2019, to target the three federally and state listed vernal pool plants known from the Santa Rosa Plain. Both the Stromberg and M&A surveys were conducted when the three target plant species on the Santa Rosa Plain were either in flower or were otherwise readily identifiable, as evidenced at the nearby Alton Lane Mitigation Site ("reference site visit") on the same dates.

Dr. Stromberg's surveys methods were consistent with the guidelines established by the CDFW in 2000 and 2009 (CDFG 2000, 2009), and with USFWS' survey guidelines (USFWS 2000, 2005), and CNPS' (2001) guidelines for assessing the effects of proposed developments on rare and endangered plants and plant communities. M&A's survey methods were also consistent with these survey guidelines, as well as the most recent survey protocol implemented by CDFW in 2018 (CDFW 2018).

Only two special-status plants were identified on the Proposed Project Site during all years of special-status plant surveys: Burke's goldfields and Lobb's buttercup (*Ranunculus lobbii*). Burke's goldfields is discussed below. Lobb's buttercup is only a CNPS Rank 4 plant without a State or Federal status and as such is not protected pursuant to CEQA and is not discussed

further. Since no other special-status plants were identified on the Proposed Project Site during the multiple years of survey, no other species are addressed here but are rather dismissed from consideration in Table 3 (see Table 3).

7.1.1 BURKE'S GOLDFIELDS

Burke's goldfields was identified in seasonal wetlands on the eastern side of the Proposed Project Site, the proposed Stonebridge Preserve location. *No Burke's goldfields have ever been identified on the western side of the Proposed Project Site (where the Stonebridge Residential Site is proposed)*. Please see attached Figure 6 for the locations of Burke's goldfields on the Proposed Project Site; this figure includes current (2019) population numbers. The eastern portion of the Proposed Project Site (i.e., the proposed Stonebridge Preserve) is currently experiencing deep pool hydrology owing to the construction of the Montage II development to the south which has blocked historical flows through the proposed Preserve area preventing water from slowly draining or dissipating offsite. As a result, the depth of these pools is not favorable to colonization by Burke's goldfields and this plant currently only occurs sparsely in limited areas (Figure 6). By enhancing the wetlands within the Stonebridge Preserve, the pool hydrology will mimic historical, natural pool hydrology and pool depths that foster colonization by Burke's goldfields.

Immediately north of the proposed Stonebridge Preserve is the CDFW-owned Woodbridge Preserve. The Woodbridge Preserve property at one time supported similar unsuitable wetland hydrology/pools for Burke's goldfields. These pools were enhanced/modified to mimic historical, natural pool hydrology and pool depths, and these pools now support dense colonies of Burke's goldfields. Attachment D has 2019 photographs of both the existing Stonebridge Preserve wetlands with sporadic occurrences of Burke's goldfields and also the enhanced Woodbridge Preserve wetlands with dense, floriferous Burke's goldfield colonies. These photographs exhibit the glaring differences in Burke's goldfield colonization of enhanced (Woodbridge) pools and existing (Stonebridge) Burke's goldfields pools.

As stated in Section 5.1, above, the hydrology of the vernal pool complexes on the entire Proposed Project Site breaks both east and west. The site development plan was carefully planned to occur in the portion of the Proposed Project Site that has a westward breaking watershed where wetlands have never been known to support Burke's goldfields. Rather a few scattered occurrences of Burke's goldfields occur in the eastern breaking watershed on the Proposed Project Site in three pools mostly immediately adjacent to the Woodbridge Preserve (Figure 6). While these three pools are regarded as "occupied," and thus, would be avoided by all project activities, the pools in the western watershed are *not* regarded as occupied since after years of rare plant surveys Burke's goldfields have never been found in the western watershed.

Figure 6 provides the locations and numbers of the small population of Burke's goldfield plants identified in 2019 on the Stonebridge Preserve portion of the Proposed Project Site. Note that numbers are small, and the number of colonies in 2019 is one fewer than observed in 2018. The occupied pools will be fenced off when pool enhancement grading activities occur within the Stonebridge Preserve to prevent harm/take of these goldfield plants.

7.1.2 BURKE'S GOLDFIELDS SEED REQUIREMENTS FOR STONEBRIDGE PRESERVE ENHANCEMENT/PRESERVATION PROJECT (ALSO SEE SECTION 8 BELOW)

Virtually all reestablished and new colonies of Burke's goldfield on the Santa Rosa Plain are from use of donor site seed sources. Such harvesting is a critical component of reestablishing and recovering the Burke's goldfield population on the Santa Rosa Plain.

Immediately north of the Stonebridge Preserve, in what is now the CDFW-owned Woodbridge Preserve, similar unsuitable wetlands for Burke's goldfields were enhanced/modified in 2005 to mimic historical, natural pool hydrology and pool depths. Burke's goldfield seeds were harvested from the Alton Lane Mitigation Site in 2005 to seed these pools. These pools now support dense colonies of Burke's goldfields.

Attachment D shows 2019 photographs of the existing Stonebridge Preserve wetlands with sporadic occurrences of Burke's goldfields. Attachment D also includes photographs taken of the CDFW-owned Woodbridge Preserve immediately over the northern fence line of the proposed Stonebridge Preserve where previously modified/enhanced wetlands currently support robust Burke's goldfield colonies. Attachment D photographs exhibit the glaring differences in Burke's goldfield colonization of enhanced/created pools at the Woodbridge Preserve vs. the existing seasonal wetlands within the proposed Stonebridge Preserve. The primary objective for enhancement of the existing wetlands in the proposed Stonebridge Preserve is to equally promote colonization of seasonal wetlands by Burke's goldfields, a critically endangered plant on the Santa Rosa Plain.

7.2 Potential Special-Status Animals on the Proposed Project Site

Figure 5 provides a graphical illustration of the closest known records for special-status species within two miles of the Proposed Project Site which provides an understanding of the number of sensitive species that occur in the vicinity. No special-status animal have ever been mapped on or adjacent to the Proposed Project Site; however, according to CDFW's CNDDB records, a total of three special-status animal species are known to occur in the region of the Proposed Project Site (Table 4 and Figure 5). Two of these species would not occur on the Proposed Project Site due to an absence of stream channels, drainages, or other permanent aquatic habitat: the western pond turtle and the Coho salmon. These two species are not discussed below.

The third species is the California tiger salamander. M&A conducted late-winter/spring California tiger salamander larval surveys in the wetlands on the project site. After examining the hydrology of the seasonal wetlands on the Proposed Project Site, and in consideration of other factors, M&A concluded the wetlands on the Proposed Project Site provide habitat that would be unlikely to support breeding California tiger salamanders. This finding is corroborated by a negative protocol level larval survey on the Proposed Project Site, and by a significant body of evidence (discussed below) that would suggest that California tiger salamanders are not present north of Santa Rosa Creek on the east of Fulton Road where the Proposed Project Site occurs. For a full analysis please see the discussion on the California tiger salamander below.

7.2.1 CALIFORNIA TIGER SALAMANDER

7.2.1.1 Legal status

The California tiger salamander Sonoma County "Distinct Population Segment" (DPS) is a federally listed endangered species. The Proposed Project Site is located within its known range. The USFWS determined that the Sonoma County DPS is significantly and immediately imperiled by a variety of threats including habitat destruction, degradation, and fragmentation due to urban development, road construction, pesticide drift, collection, and inadequate regulatory mechanisms. In addition, it was determined that this population could face extinction as a result of naturally occurring events (e.g., fires, droughts) due to the small and isolated nature of the remaining breeding sites combined with the small number of individuals in the population. On August 31, 2011, the Final Rule on the Revised Designation of Critical Habitat for the Sonoma County Distinct Population of the California tiger salamander was published (76 FR 54346 54372) (USFWS 2011). Approximately 47,383 acres were designated as Critical Habitat. *The Proposed Project Site is located within designated critical habitat in the Santa Rosa Plain (Figure 10).*

On March 4, 2010, the California tiger salamander was also State-listed as a threatened species under the California Endangered Species Act (CESA). Proposed projects may not impact California tiger salamanders without incidental take authority from both USFWS and CDFW. Prior to implementing a project that would result in "take" (i.e., to harm, harass, or kill) California tiger salamanders, applicants must obtain "Incidental Take" authorization from the USFWS pursuant to either Section 7 or Section 10 of the FESA. Similarly, projects that would impact California tiger salamanders also require an Incidental Take Permit (ITP) from CDFW pursuant to the CESA.

7.2.1.2 Life History

California tiger salamanders occur in grasslands and open oak woodlands that provide suitable aestivation and/or breeding habitats. M&A has worked with populations that are almost at sea level (Catellus Site in the City of Fremont) to almost 2,900 feet above sea level (Kammerer Ranch, East Santa Clara County). California tiger salamanders spend the majority of their lives underground. They typically only emerge from their subterranean refugia for a few nights each year during rainfall events typically in late October through December to migrate to breeding ponds where they lay eggs. After spending a up to a few weeks and sometimes longer in breeding ponds the adult salamanders then return to their subterranean over-summering refugia not to resurface until the following breeding season. Young hatch typically in February and March and metamorphose leaving natal ponds in search of subterranean refugia typically in late April and May.

Deep, seasonal and sometimes perennial wetlands typically provide most of the breeding habitat used by California tiger salamanders. California tiger salamanders attach their eggs to rooted, emergent vegetation, and other stable filamentous objects in the water column. Eggs are gelatinous and are laid singly or occasionally in small clusters. Eggs range in size from about three-quarters (¾) the diameter of a dime to the full diameter of a dime. Typically, seasonal breeding pools must hold water into the month of May to allow enough time for larvae to fully

metamorphose. Pools that are 16 inches or deeper in the peak winter months usually will remain inundated long enough to provide good breeding conditions for California tiger salamanders. Optimal pools are typically deeper than 16 inches consistently in most winters.

In dry years, seasonal wetlands, especially shallower pools, may dry too early to allow enough time for California tiger salamander larvae to successfully metamorphose. As pools dry down to very small areas of inundation, California tiger salamander larvae become concentrated and are particularly susceptible to predation. In Cotati, Mr. Monk observed drying pool predation of larvae by red-sided garter snakes (*Thamnophis sirtalis infernalis*). Similarly, ducks (various spp.) are often observed predating breeding pools. In duck-ravaged pools, larvae may be concentrated in deeper water or are found in areas along the pool margins were pools remain relatively deep and there is dense emergent vegetation. When pools dry too soon, desiccated California tiger salamander larvae can be found, but owing to scavengers usually disappear within a day or two.

Shallow pools are not optimal California tiger salamander breeding sites. Pools that are as shallow 10 to 12 inches may still attract breeding salamanders, but young do not often successfully metamorphose from such pools except in years exhibiting wet springs. With frequent rainfall events in March and April, or with infrequent but large late spring rainfall events, shallower pools can remain hydrated long enough to allow California tiger salamander larvae ample time to successfully metamorphose from shallower pools. Pools that dry and rehydrate multiple times over the winter do not provide the continuous hydration period required for successful metamorphosis of young.

7.2.1.3 Migration

Adult California tiger salamanders have been observed up to 2,092 meters (1.3 miles) from breeding ponds (USFWS 2004). As such, unobstructed migration corridors are an important component of California tiger salamander habitat. In Sonoma County, Mr. G. Monk has been conducting California tiger salamander surveys since 1989 (Exhibit B). It is M&A's direct experience that California tiger salamanders move to their breeding pools at night during the first heavy, typically warmer, rainfall events of the year, usually in late-October into early December. In most instances, early movements from over-summering refugia to breeding sites do not occur until it has been raining continuously for several days, but occasionally errant salamanders may move to breeding pools during light rainfall events too. Typically, movements of California tiger salamander occur when temperatures are above 48° F.

A primary factor encouraging larger movements of California tiger salamanders is continuous or nearly continuous rainfall over many days. Resultant widespread ground saturation that otherwise floods over-summering refugia can result in relatively large numbers of California tiger salamanders leaving their refugia in search of breeding sites over a one- or two-night period (as observed by G. Monk and S. Lynch during numerous studies). In addition to pitfall trapping results that demonstrate such movements, often these focused movement periods are evident in breeding pools where up to several size classes of larvae can be identified later in the spring, each size class likely being representative of a focused movement period for adult breeding salamanders.

7.2.1.4 Closest Known California Tiger Salamander Breeding Population

The closest known CNDDB record (CNDDB Occurrence No. 360) for the California tiger salamander to the Proposed Project Site is located approximately 2,230 feet (~0.42-mile) to the west at the Alton Lane Mitigation Site (Figure 11). This record resulted from the translocation of California tiger salamander larvae from the Wright Conservation Site to the man-made pools at the Alton Lane Mitigation Site circa 1990-91. Alton Lane Mitigation Site is a former vineyard that was restored into a vernal pool complex in 1989-1992. California tiger salamander adults were also translocated to the Alton Lane Mitigation Site by CDFW (then CDFG) from an M&A salvage project in Cotati immediately west of Highway 101 and north of Highway 116.

7.2.1.5 California Tiger Salamander Studies on and Near the Project Site

M&A biologists hold a federal 10(a)(1)(A) Recovery Permit and a State Memorandum of Understanding (MOU) to conduct California tiger salamander surveys. M&A has extensive experience in the Santa Rosa Plain conducting California tiger salamander surveys and assessments since 1989 (Exhibit B). Most recently, USFWS and CDFW granted approval for M&A biologists to conduct protocol-level surveys for California tiger salamander larvae and adults on the Proposed Project Site. M&A completed one visual California tiger salamander egg survey (March 7, 2019) and three larval dip-netting surveys (March 28, April 15, and May 21, 2019) on the project site. *No California tiger salamander eggs or larvae were observed/identified on the Proposed Project Site.* In early October 2019, M&A established approximately 5,475 linear feet of drift fencing complete with 193 pitfall traps on the project site. This pitfall trapping array will be operated this winter (2019-2020) per USFWS/CDFW's joint survey protocol (2003) to determine if adult California tiger salamanders reside on the project site.

In addition to project site surveys, M&A has completed a large number of multi-season formal California tiger salamander surveys throughout the Santa Rosa Plain, many of which were conducted in the immediate Proposed Project Site vicinity (Exhibits B and C). *M&A have never found California tiger salamanders east of Fulton Road or north of the Wright Conservation Site in Santa Rosa*.

From 2005-2007, M&A completed two winters (adult surveys) and one spring (larval surveys) of field surveys for California tiger salamanders on the Kerry Ranch I, II, and III project sites, which are immediately east of the project site. *No California tiger salamanders were captured on the Kerry Ranch project sites at any time during the 2005/2006 and 2006/2007 survey seasons*. Most recently, in 2018, M&A received USFWS approval to conduct protocol-level larval surveys on the now much-reduced, 4.15-acre, Kerry Ranch I project site (2181 Francisco Avenue). *After completion of the protocol level larval survey, no California tiger salamander larvae were captured*.

Other biologists have also completed formally-approved two-year California tiger salamander surveys in the immediate area of the Proposed Project Site - *all with negative survey results* (Exhibit C). In 2004, a California tiger salamander site assessment was completed by Dr. Michael Fawcett at 1835 Fulton Road. This assessment included larval dip-netting surveys. Survey results were negative. In addition, in 2005-2007 a two-year California tiger salamander

survey was conducted by Dr. Fawcett at 2323 and 2285 San Miguel Avenue in northwest Santa Rosa, just east of Fulton Road and north of Piner Road. *Again, survey results were negative*.

Also, in 2006 and 2007, Dr. Fawcett completed two-year formal surveys at 2022 Fulton Road, 2038 Fulton Road, 2082 Fulton Road, and 2420 San Miguel Road, all of which are in closer proximity to the Alton Lane Conservation Complex than the proposed Stonebridge Preserve. After submitting a two-year survey report to USFWS for the formally completed surveys, USFWS sent an email to Dr. Fawcett and the Applicant stating: *The Service concurs with the conclusions of the July 23, 2008 Report on California Tiger Salamander surveys conducted at four West Santa Rosa Properties, Sonoma County, California. As a result, the Proposed Project will not result in 'take' and no mitigation for the Sonoma County Distinct Population Segment of California tiger salamander (Ambystoma californiense) is necessary* (Email attached as Attachment E). In 2019, Dr. Fawcett prepared a letter regarding his belief that that the California tiger salamander would not be found on the project site, or north of Santa Rosa Creek and east of Fulton Road (Attachment F).

Other properties near the Proposed Project Site in the area bounded by Fulton Road, Francisco Avenue, and San Miguel Road were surveyed for California tiger salamanders between 2002 and 2004 by Dr. Mark Jennings and Ms. Gretchen Padgett-Flohr of Live Oak Associates; *all surveys were negative*.

Between 2002 and 2019, in the vicinity of the Project, over 40 studies for California tiger salamander were conducted by credentialed biologists. Their studies included site assessments, larval surveys, and 2-year studies, all of which were negative for California tiger salamander occurrence. From this large body of data, M&A concludes that it is most unlikely that California tiger salamander are present on the Project site.

7.2.1.6 Project Site Seasonal Wetland Breeding Pool Suitability Analysis and Discussion

The pools on the Proposed Project Site are not optimal California tiger salamander breeding pools and would be unlikely to support a successful reproductive cycle; this statement is considered with the fact that there *are no records for California tiger salamanders east of Fulton Road and north of Santa Rosa Creek* [Source: CNDDB records Figure 5, M&A studies, and Dr. Michael Fawcett -Studies as supported by Attachment F]. The absence of California tiger salamander records east of Fulton Road and north of Santa Rosa Creek may indicate that seasonal wetlands east of Fulton Road are not suitable for California tiger salamander reproduction.

Based on Mr. Monk's 30 years of work with California tiger salamander on the Santa Rosa Plain and elsewhere, the following characteristics are believed to collectively determine whether seasonal wetlands on the Santa Rosa Plain are suitable for California tiger salamander breeding and metamorphosis:

- **Pool Depth:** Generally, on the Santa Rosa Plain, pools that are 16 inches or deeper are necessary to provide a sufficient hydroperiod that allows California tiger salamander eggs to hatch and for young to successfully metamorphose. While pool depth is an important

characteristic of a successful breeding pool, it is not the only determinant. The pools must also maintain deep water *continuously* over a long enough hydroperiod to allow California tiger salamander to reproduce, for eggs to hatch, and for larvae to successfully metamorphose.

One reason deeper pools are generally better for larval development is because the water remains cooler. Shallow pools are warmed faster by the sun, evaporate more quickly becoming smaller and more prone to successful predation, and most importantly, warmer water carries less free oxygen which is necessary for California tiger salamander larvae to mature and metamorphose.

Warmer pools also tend to promote algae blooms and the subsequent excessive decomposition of algae further lowers available oxygen. Free oxygen in pools is a critical factor for California tiger salamander larvae since as they progress through metamorphosis they absorb their gills. With ample free oxygen in the water, California tiger salamander larvae are able to reach full metamorphosis even with partially to fully absorbed gills.

Thick and continuous algal blooms occur most frequently in warmer pools, especially pools that are subjected to higher nutrient levels such as pools that are grazed by livestock. Continuous algae mats usurp the water column of free oxygen through bacterial degradation. This low oxygen environment is detrimental to California tiger salamander larvae. As important, algal blooms physically block advanced larvae from rising to the surface to gulp air, which becomes critical for larvae that have partially to fully absorbed their gills prior to full metamorphosis.

- **Rainfall Patterns:** Rainfall patterns can influence breeding pool suitability. Winters that extend well into spring, bringing more rainfall events, can render even shallower pools (e.g., 12-inch deep pools), or pools with higher soil infiltration rates, potentially useable by California tiger salamander for breeding/larval development. Late rains may continuously replenish pool water depths countering pool drawdown to mud that kills larvae that have not metamorphosed.

- **Escape Habitat:** Seasonal wetlands which have tea-colored to turbid water provide visual screening making predation of California tiger salamander larvae less likely. Similarly, wetlands which support a moderate density of in-column aquatic plants provide California tiger salamander larvae with predator escape cover, and thus, are better California tiger salamander breeding pools. California tiger salamander larvae that occur in clear water pools are readily predated by waterfowl. Turbidity can also be a result of ducks feeding in pools that support silty soils, and the indirect effect is that the stirred up bottom sediments provide cover for California tiger salamander larvae. Pools with solid bottom sediments that are not as subject to stirred up suspension of sediments in the water column, that otherwise provide clear water conditions, allow predators such as ducks clear visibility of targeted California tiger salamander larvae.

- **Impermeable Soils:** Soil types that are more impermeable (i.e., that support lower infiltration rates) are more likely to support adequate pool depths over sufficient duration for

California tiger salamander larvae to successfully metamorphose (typically pools must remain hydrated through May).

- **Population Expansion and Impediments to Migration:** California tiger salamander breeding pools that have adjacent unimpeded migration habitat to previously unoccupied pools (such as created mitigation pools) are more likely to be used by an expanding California tiger salamander breeding population. In contrast, non-breeding pools that are isolated from known California tiger salamander breeding pools by heavily trafficked roads, high-density housing developments, vertical or near vertical concrete lined canals/creeks, and other geographic impediments (i.e., "barriers"), are unlikely to support an expanding California tiger salamander breeding population.

7.2.1.7 Analysis of the Pools on the Stonebridge Project Site

M&A concludes that the seasonal wetlands present on the Proposed Project Site do not exhibit the characteristics necessary to provide successful California tiger salamander breeding habitat. This is corroborated by M&A's negative California tiger salamander larval surveys onsite in 2019, M&A's past California tiger salamander studies in the vicinity of the Proposed Project Site which were also negative, and finally, the work of many other California tiger salamander biologists in the area of the project site that corroborates M&A's negative findings. This is likely attributable to several factors that include pool characteristics as discussed above, and the isolation of the Proposed Project Site from extant California tiger salamander breeding populations.

The observed hydrology of the seasonal wetlands on the Proposed Project Site in 2018/19 indicate that pools did not retain water at adequate depths over continuous duration, long enough to facilitate full California tiger salamander larval metamorphosis despite a wet and long winter. The 2018/2019 rainfall season was an exceptionally high rainfall year, and significant rainfall events persisted well into spring. The National Oceanic and Atmospheric Administration (NOAA) reports that rainfall in Santa Rosa from October 1, 2018, to June 23, 2019, was 134% of normal (https://www.cnrfc.noaa.gov/awipsProducts/RNOWRKCLI.php).

Presumably owing to an exceptional winter of rainfall and late-spring rainfall events, even shallower pools than 16 inches could be used successfully by California tiger salamander for breeding. Exhibit A shows the Proposed Project Site wetland depths. On March 28, 2019, pools measured from 4" to 24" deep, the deepest these pools were measured in the winter/spring of 2018/19. By April 15, 2019, pool depths had dropped by approximately 6 to 12 inches, and one-third (1/3) of all pools on the Proposed Project Site only supported saturated soils (had no standing water). Thus, in a two and one-half week period, the pools had lost half of their water or more.

Pool depths were not investigated on May 15, 2019, the optimal hydroperiod allowing most California tiger salamander larvae to complete metamorphosis in the Santa Rosa Plain. Nevertheless, due to the rapid draw-down observed from March 28th to April 15th, M&A does not believe that pools retained deep enough water into May to support California tiger salamander larvae.

The rapid draw-down of the Stonebridge pools is likely facilitated by relatively permeable soils. By April 15, 2019, the pools that remained, with few exceptions, were already too shallow, too warm, too clear, and too small to support California tiger salamander larval development. The smaller, shallower pools would facilitate focused predation, allowing waterfowl to feed on California tiger salamander and other amphibian larvae. On April 15th there was a measured dramatic decline in the Sierran treefrog (*Pseudacris sierra*) larval population in remaining pools supporting the notion that most larvae had metamorphosed and/or there had been heavy predation of these larvae.

As discussed elsewhere in this report, there is ample scientific evidence that adult California tiger salamander do not occur within or proximate to the seasonal wetlands on the Stonebridge Proposed Project Site. As described above, pools within the Proposed Project Site do not provide characteristics that are expected to support a breeding California tiger salamander population. The nearest documented extant California tiger salamander breeding habitat is more than 2,200 feet to the west of the Proposed Project Site, across Fulton Road, in the Alton Lane Mitigation Site. Fulton Road is a significant geographic barrier that would prevent California tiger salamander from being able to migrate to the Proposed Project Site.

7.2.1.8 Potential Migration to the Project Site From Known Breeding Locations

The closest known California tiger salamander breeding pool to the Proposed Project Site is located approximately 2,230 feet (~0.42-mile) to the west at the Alton Lane Mitigation Site (Figure 11). Aside from the Alton Lane Mitigation Site area, all known California tiger salamander breeding locations are separated from the Proposed Project Site by several to many miles of high-density urban development, which without doubt is an effective geographic barrier preventing migration to the project site. Regarding the closest known breeding record, it is most unlikely that California tiger salamanders that occur at the Alton Lane Mitigation Site would be able to successfully migrate east, across heavily trafficked Fulton Road, to the Proposed Project Site.

Amphibians and reptiles are highly susceptible to injury or death while crossing roads (van Gelder 1973, Fahrig et al. 1995, Carr and Fahrig 2001). Hels and Buchwald (2001) studied the relationship between traffic volume and amphibian mortality for several species of frogs and salamanders. They concluded that *where amphibians have fixed routes to and from spawning sites they may be undeterred by low to medium traffic intensity (i.e., below 12,000 vehicles per 24 hours).* Also, that: *Mortality of this type therefore may be higher than predicted from traffic intensity alone.* Finally, the authors concluded: *with increased traffic intensity, mortality may eventually reduce the population to a level where its reproductive output is too small to reach the carrying capacities of the breeding ponds*.

Fulton Road represents a significant geographic barrier to California tiger salamander migration from the Alton Lane Mitigation Site west of Fulton Road to the project site east of Fulton Road. The reach of Fulton Road between the project site and the Alton Lane Mitigation Site was "improved" in 2008 (Exhibit D). It is now a four-lane road supporting bicycle lanes, curbs on both sides, a sidewalk on the east side, and a left turn lane down the center (so essentially 5

lanes). The curbs have 7-inch vertical side walls that constitute effective barriers to California tiger salamander migration. That said, with 19,124 vehicle trips a day (data from between Piner and Piner High School, April 28, 2015 - Pacific Traffic & Transit Data Services), Fulton Road is a significant and lethal geographical impediment to California tiger salamander migration from the Alton Lane Mitigation Site on the west side of Fulton Road to the east side of Fulton Road where the project site is located.

Even considering nocturnal vehicle trips per day on Fulton Road, the timeframe when California tiger salamanders migrate, Fulton Road represents a significant impediment to successful migration across this road. Of the recorded 19,124 vehicle trips per day (796.83 trips per hour) recorded in 2015, 3,987 of these trips occurred between 8 p.m. and 8 a.m. (332.25 trips per hour). Appendix F provides a summary of the traffic counts from Pacific Traffic & Transit Data Services in 2015. Thus, even at night, traffic counts would be lethal to any amphibian trying to cross Fulton Road, especially in consideration that curbs on both sides of the street would keep any salamander that ended up in the road, imperiled over an extended period while it tried to escape the high curbs. If a salamander were to end up in the road, the only likely way it would survive is if it was able to find a storm drain inlet, which regardless would divert the salamander ultimately to the Laguna de Santa Rosa within the storm drain system. Fulton Road is a significant geographic barrier that would prevent successful migration of the California tiger salamander to the project site from the Alton Lane Mitigation Site.

7.2.1.9 California Tiger Salamander Impact Conclusions

Based upon the multitude of California tiger salamander studies conducted over many years on properties immediately adjacent to or near the Proposed Project Site, all that had negative findings, and as there are no CNDDB records for California tiger salamanders east of Fulton Road or north of Santa Rosa Creek (CNDDB records 2019), M&A concludes that implementation of the Proposed Project is unlikely to result in any impacts to the California tiger salamander, either to occupied habitat or to individual California tiger salamanders as further discussed in Section 14, below. Although the Proposed Project would not result in "take" of the California tiger salamander, CDFW requested that a full "Protocol" California tiger salamander study be completed pursuant to the *Interim guidance on site assessment and field surveys for determining presence or a negative finding of the California tiger salamander* (USFWS 2003). A Protocol California tiger salamander study includes an upland survey (aka "winter pitfall trapping study") and two spring larval breeding pool surveys that must be completed to prove absence of the California tiger salamander on a project site.

One spring larval survey was completed on the Proposed Project Site per the California tiger salamander Protocol in the spring of 2019 and was negative for California tiger salamander larvae. The winter pitfall trapping study is currently underway on the Proposed Project Site and will not be completed until March 15, 2020. The second larval survey will be completed by May 15th, 2020. The completion of the Protocol California tiger salamander survey will provide data that will either support or refute a conclusion that California tiger salamander are unlikely to occur on the Proposed Project Site. ***Until the Protocol study is complete, and the California tiger salamander has been determined to be absent, impacts to the California tiger salamander are regarded as potentially significant pursuant to the CEQA.***

If the Protocol survey is completed and demonstrates absence of the California tiger salamander on the Proposed Project Site, CDFW will not require an Incidental Take Permit pursuant to the California Endangered Species Act and would not require any mitigation measures for California tiger salamander (G. Monk pers. comm. w/ M. Day, CDFW, September 2019).

Regardless, the Proposed Project proposes to mitigate impacts to potential California tiger salamander migration/dispersal habitat as indicated in Sections 3 and 14 of this analysis (See Impacts and Mitigation Section below). In accordance with USFWS' mitigation requirements applied to other projects in the Santa Rosa Plans, mitigation at a 1:1 (impacts to replacement) ratio is warranted for impacts to USFWS designated California tiger salamander migration/ dispersal habitat since the project site is between 2,200 feet and 1.3 miles of the closest known California tiger salamander breeding site, which is the Alton Lane Mitigation Site, approximately 2,230 feet west of the project site (Figure 11). This mitigation requirement was originally established in the USFWS' Conservation Strategy (USFWS 2005) and was later again incorporated into the USFWS' *Programmatic Biological Opinion* (USFWS 2007) for impacts that could occur to potential migration/dispersal habitat within 1.3 miles of a known California tiger salamander breeding pool.

As originally prescribed in the USFWS' Conservation Strategy (USFWS 2005), it states on page 40, *the mitigation requirement for projects on parcels with existing hardscape (see Glossary) can be reduced by the amount of hardscape present*. The Glossary (Section 11) of the Conservation Strategy provides the following definition: **"Hardscape** – Roads, parking lots, compacted gravel surfaces, buildings, or other structures." Neither CDFW nor USFWS requires California tiger salamander mitigation compensation for impacts to "hard-pack" areas. Approximately 0.60-acre of the 14.60-acre development site is currently developed with buildings or hard-packed, gravel-impregnated roadways and parking areas around existing buildings (as shown in Figure 11). These developed surfaces do not constitute California tiger salamander habitat that warrants mitigation. Thus, the 1:1 mitigation requirement would apply to a total of 14.00 acres (that is, 14.60 acres minus 0.60-acre). The Preserve acreage of 14.00 acres would remain available for use by all wildlife including the California tiger salamander if at some time in the future it expands its range. That said, if the California tiger salamander is identified on the Proposed Project Site during completion of the Protocol study, additional mitigation would be warranted as detailed in the Impacts and Mitigations Section of this report.

8. SUMMARY ANALYSIS OF THE EFFECTS OF BURKE'S GOLDFIELDS SEED COLLECTION

The Proposed Project includes a proposal to create the Stonebridge Preserve where wetlands would be enhanced and created to inure to the benefit of Burke's goldfields, a state and federally listed endangered vernal pool plant that occurs on the Santa Rosa Plain. New wetlands and enhanced wetlands within the proposed Stonebridge Preserve will be constructed as a restoration component of the Proposed Project. The targeted pool hydrology will mimic historical, natural pool hydrology and pool depths that foster colonization of pools by Burke's goldfields. The plan to create and enhance Burke's goldfields habitat will require the collection of seeds from healthy colonies of Burke's goldfields for use in recolonizing enhanced and created seasonal wetlands

within the Stonebridge Preserve. Per a Seed Collection Plan prepared by L. Stromberg (L. Stromberg 2018c), Burke's goldfield seeds will be collected from a number of possible source populations including the Alton Lane Mitigation Site and/or the Woodbridge Preserve, and other sites. CDFW owns the Woodbridge Preserve and is proposed to own the Alton Lane Mitigation Site in the future. Since seeds are proposed to be collected in the spring of 2020, for use in the Stonebridge Preserve, CDFW would have to allow the collection of Burke's goldfield seeds from one of these sites or other sites CDFW may designate.

In consideration that CDFW now owns or will own soon most of the property that supports extant Burke's goldfield populations in the Santa Rosa Plain, the Applicant is proposing that Burke's goldfield seeds would be harvested from a CDFW-owned conservation site. In meetings with the CDFW conducted by the Applicant and Applicant's team to discuss this possibility, CDFW was amenable to the notion that Burke's goldfield seeds could be collected from their lands for this important ecological restoration project.

CDFW Region 3 met with the Applicant's team on March 18, 2019 and April 25, 2019 to discuss the Burke's goldfield reestablishment goals for the Stonebridge Preserve and the collection of Burke's goldfield seeds from CDFW-owned lands. In consideration that studies of Burke's goldfield harvested colonies had been underway since 2016 to determine if there is a deleterious effect when extant colonies of Burke's goldfields are used as donor sites, CDFW requested quantification of the effects of this seed harvesting.

L. Stromberg and S. Gordon conducted Burke's goldfield seeding harvesting studies at a number of conservation sites in the period of 2016 through 2018 (Stromberg and Gordon 2019a). In 2016, the Alton North Conservation Bank was selected as the donor site where 19 donor plots were established. Populations of Burke's goldfields were quantified in 2016. In 2017, seeds were harvested for dispersal to the Alton South Mitigation Site (ASMS) (recipient site). Burke's goldfield numbers at the donor site were again quantified in 2018, the year after collection. Comparing numbers of Burke's goldfields at the donor site in 2016 with numbers in the same plots in 2018, the year after seeds were harvested, resulted in demonstrated increases in Burke's goldfields plants in 13 plots, decreases in five plots, and no change in a single plot. Collectively, all plots of Burke's goldfield increased from 60,778 to 196,223 plants, a 323 percent increase. Also, in 2018, four reference pools (pools that were not used as donor pools) at the Alton North Conservation Site showed declines in the number of Burke's goldfields. Regardless, considering the entire conservation site, the number of Burke's goldfields actually increased approximately 40 percent (op. cit.), largely at the donor plots.

Similarly, L. Stromberg and S. Gordon are conducting a Burke's goldfields and Sonoma sunshine (*Blennosperma bakeri*) seed harvesting study at the Woodbridge Preserve (donor site) (Stromberg and Gordon 2019b). The percent cover and numbers of Burke's goldfields and Sonoma sunshine seeds were initially quantified in donor pools in 2016 and were then harvested in 2017 for dispersal to (inoculation of) created pools at the Fulton Road Mitigation Site. As quantified in 2018, the average cover of Burke's goldfields decreased from 2016 to 2018 at donor plots, but the number of plants increased *indicating plants were smaller so provided less cover but were more numerous*.

While the two L. Stromberg and S. Gordon studies (Stromberg and S. Gordon 2019a, 2019b) are only three years into a proposed six-year study period, the data support the preliminary determination that Burke's goldfield seed harvesting does not harm donor populations. As stated in Stromberg and Gordon (2019b), *the objective of the collection effort was to establish new populations of Burke's goldfields and Sonoma sunshine at the Alton South Conservation Bank while simultaneously not adversely affecting donor pools at the existing Alton North Conservation Bank. At the Alton South Conservation Bank new Burke's goldfields colonies were documented in 15 newly created pools while Sonoma sunshine was documented in 16 newly created pools*.

Virtually all reestablished and new colonies of Burke's goldfield on the Santa Rosa Plain are from use of donor site seed sources. Such harvesting is a critical component of reestablishing and recovering the Burke's goldfields populations on the Santa Rosa Plain.

During meetings with USFWS on July 12, 2018, and with CDFW on March 18, 2019, and April 25, 2019, the Applicant team demonstrated that all meaningful recolonizations of Burke's goldfield in the Santa Rosa Plain have been successful owing to the use of Burke's goldfield seeds collected from extant donor colonies. It was shown that the Burke's goldfield seeds used to create the now-regionally-significant Alton Lane Mitigation Site originally came from donor pools that were being impacted on the G. Kovatch, TMD-Brown, and Schellinger Brother's development project sites in 1989-1992. All three of these development project impact areas were located north of Piner Road and immediately east of the Proposed Project Site.

The successful colonization of the Alton Lane Mitigation Site by Burke's goldfields was used as a donor site for the creation of the Woodbridge Preserve in 2005, the Slippery Rock Conservation Site in 2006, and in created and enhanced pools at the Wright Conservation Site in 2007. In turn, donor colonies at the Woodbridge Preserve were used in 2010 at the Alton North Mitigation Bank, and at the Fulton Road Mitigation Bank in 2017. Also, successfully created Burke's goldfields colonies at the Alton North Mitigation Bank were used as donor sites for the Alton South Mitigation Bank in 2017. All these Burke's reintroductions have been highly successful, and clearly would not have occurred without Burke's goldfields donor pool seed sources. Thus, it is easy to conclude that in order to promote the recovery of Burke's goldfields on the Santa Rosa Plain, that Burke's goldfield seed collection is a vitally important component of any reintroduction efforts for establishing Burke's goldfields in newly created seasonal wetlands.

9. REGULATORY FRAMEWORK FOR NATIVE WILDLIFE, FISH, AND PLANTS

This section provides a discussion of laws and regulations that are in place to protect native wildlife, fish, and plants. Under each law its relevance to the Proposed Project is discussed.

9.1 Federal Endangered Species Act

The Federal Endangered Species Act (FESA) forms the basis for the federal protection of threatened or endangered plants, insects, fish and wildlife. FESA contains four main elements, as follows:

Section 4 (16 USCA §1533): Species listing, Critical Habitat Designation, and Recovery Planning: outlines the procedure for listing endangered plants and wildlife.

Section 7 (§1536): Federal Consultation Requirement: imposes limits on the actions of federal agencies that might impact listed species.

Section 9 (§1538): Prohibition on Take: prohibits the "taking" of a listed species by anyone, including private individuals, and State and local agencies.

Section 10: Exceptions to the Take Prohibition: non-federal agencies can obtain an incidental take permit through approval of a Habitat Conservation Plan.

In the case of salt water fish and other marine organisms, the requirements of FESA are enforced by the National Marine Fisheries Service (NMFS). The USFWS enforces all other cases. Below, Sections 9, 7, and 10 of FESA are discussed since they are the sections most relevant to the Proposed Project.

Section 9 of FESA as amended, prohibits the "take" of any fish or wildlife species listed under FESA as endangered. Under Federal regulation, "take" of fish or wildlife species listed as threatened is also prohibited unless otherwise specifically authorized by regulation. "Take," as defined by FESA, means "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." "Harm" includes not only the direct taking of a species itself, but the destruction or modification of the species' habitat resulting in the potential injury of the species. As such, "harm" is further defined to mean "an act which actually kills or injures wildlife; such an act may include significant habitat modification or degradation where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding or sheltering" (50 CFR 17.3). A December 2001 decision by the 9th Circuit Court of Appeals (Arizona Cattle Growers' Association, Jeff Menges, vs. the U.S. Fish and Wildlife Service and Bureau of Land Management, and the Southwest Center for Biological Diversity) ruled that the USFWS must show that a threatened or endangered species is present on a project site and that it would be taken by the proposed activities. According to this ruling, the USFWS can no longer require mitigation based on the probability that the species could use the site. Rather they must show that it is "reasonably certain to occur."

Section 9 applies to any person, corporation, federal agency, or any local or State agency. If "take" of a listed species (other than a plant species) is necessary to complete an otherwise lawful activity, this triggers the need to obtain an "incidental take permit" either through a Section 7 Consultation as discussed further below (for federal actions or private actions that are permitted or funded by a federal agency such as the Corps), or through Section 10 of FESA which requires preparation of a Habitat Conservation Plan (HCP) (for state and local agencies, or individuals, and projects without a federal "nexus"; for example, projects that do not need a Corps permit).

Section 7(a)(2) of the Act requires that each federal agency consult with the USFWS to ensure that any action authorized, funded or carried out by such agency is not likely to jeopardize the continued existence of an endangered or threatened species or result in the destruction or adverse modification of Critical Habitat for listed species. Critical Habitat designations mean: (1)

specific areas within a geographic region currently occupied by a listed species, on which are found those physical or biological features that are essential to the conservation of a listed species and that may require special management considerations or protection; and (2) specific areas outside the geographical area occupied by a listed species that are determined essential for the conservation of the species.

The Section 7 consultation process only applies to actions taken by federal agencies that are considering authorizing proposed actions. Section 7 is by and between the NMFS and/or the USFWS and the federal agency contemplating a discretionary approval (that is, the federal "action agency," for example, the Corps or the Federal Highway Administration). Private parties, cities, counties, etc. (i.e., applicants) may participate in the Section 7 consultation *at the discretion of the federal agencies conducting the Section 7 consultation*. The Section 7 consultation process is triggered by a determination of the "action agency" – that is, the federal agency that is carrying out, funding, or approving a project - that the Proposed Project "may affect" a listed species or Critical Habitat. If an action is likely to adversely affect a listed species or designated Critical Habitat, formal consultation between the nexus agency and the USFWS/NMFS is required. As part of the formal consultation, the USFWS/NMFS may resolve any issues informally with the nexus agency or may prepare a formal Biological Opinion assessing whether the proposed action would be likely to result in "jeopardy" to a listed species or if it could adversely modify designated Critical Habitat. If the USFWS/NMFS prepares a Biological Opinion it will contain either a "jeopardy" or "non-jeopardy" decision. If the USFWS /NMFS concludes that a proposed project would result in adverse modification of Critical Habitat or would jeopardize the continued existence of a federal listed species (that is, it will issue a jeopardy decision), the nexus federal agency would be unlikely to authorize its discretionary permit. If the USFWS/NMFS prepares a "non-jeopardy" Biological Opinion, the nexus federal agency may authorize the discretionary permit with the conditions of the Biological Opinion conditions of its discretionary permit. A non-jeopardy Biological Opinion constitutes an "incidental take" authorization that allows applicants to "take" federally listed species while otherwise carrying out legally sanctioned projects.

For non-federal entities, for example private parties, cities, and counties that are proposing a project that might result in incidental take, Section 10 provides the mechanism for obtaining that take authorization. Under Section 10 of FESA, for the applicant to obtain an "incidental take permit," the applicant is required to submit a "conservation plan" to the USFWS or NMFS that specifies the impacts that are likely to result to federally listed species, and the measures the applicant will undertake to minimize and mitigate such impacts, and the funding that will be available to implement those steps. Conservation plans under FESA have come to be known as "habitat conservation plans" or "HCPs" for short. The terms Incidental Take permit, Section 10 permit, and Section 10(a)(1)(B) permit are used interchangeably by the USFWS. Section 10(a)(2)(B) of FESA provides statutory criteria that must be satisfied before an incidental take permit can be issued.

9.1.1 Responsible Agency

FESA gives regulatory authority to the USFWS for federally listed terrestrial species and non-anadromous fish. The NMFS has regulatory authority over federally listed marine mammals and anadromous fish.

9.1.2 APPLICABILITY TO THE PROPOSED PROJECT

The Proposed Project Site supports one federally listed species: Burke's goldfields. Since the Proposed Project will require a Clean Water Act permit (Section 404 permit) from the Corps, the USFWS will produce a Biological Opinion that provides FESA Incidental Take authority. While FESA has no requirements for Incidental Take of plants, the Biological Opinion can be expected to have conservation measures that will apply to Burke's goldfield.

The Proposed Project includes creation of a wetland/rare plant habitat preserve and, as such, will include preservation and enhancement of seasonal wetlands that will result in the recruitment of Burke's goldfields colonies to the Santa Rosa Plain.

The Proposed Project is not expected to result in the direct take of the California tiger salamander as it has not been identified on the Proposed Project Site to date; however, it may result in the potential destruction or adverse modification of federally designated Critical Habitat (Figure 10). The approximately 47,383 acres of designated Critical Habitat for California tiger salamander includes developed areas and roadways that may include unoccupied and occupied California tiger salamander habitats. Indeed, the USFWS designated Critical Habitat over much of the City of Santa Rosa. Accordingly, USFWS designated Critical Habitat is not an indication that the California tiger salamander would be impacted by activities occurring within the mapped Critical Habitat.

USFWS does not require mitigation for impacts to Critical Habitat; nonetheless, USFWS must consider whether the destruction or adverse modification of Critical Habitat could preclude recovery of the species prior to the time it can authorize Incidental Take for proposed projects (G. Monk pers. comm. with J. Hanni, USFWS, October 2019). If the proposed action would preclude recovery, USFWS will not authorize Incidental Take for a proposed project. The Proposed Project is not expected to preclude recovery of the California tiger salamander because there is substantial evidence that the California tiger salamander doesn't use or occur on the Proposed Project Site. However, since the Proposed Project Site is within 1.3 miles of a known California tiger salamander breeding site (Figure 11), the recognized dispersal distance of the California tiger salamander, the Proposed Project includes mitigation for impacts to potential California tiger salamander migration/dispersal habitat that includes land preservation consistent with USFWS policy. The mitigation land will provide similar habitat attributes to the land that will be developed.

If the California tiger salamander is identified on the Proposed Project Site during the Protocol survey that is currently underway, mitigation will also be required for the project's impact on the species and a consideration would be made by USFWS during Section 7 Consultation of whether the effects on designated Critical Habitat constitute adverse impacts that would preclude recovery of the species. It is M&A's conclusion that even if the site is occupied and developed, it would not preclude recovery of the species because ample mitigation that includes land preservation is being provided by the Applicant. See the Impacts and Mitigation section (Section 14) for complete details on Burke's goldfields mitigation and California tiger salamander mitigation.

9.2 Federal Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) of 1918 (16 U.S.C. §§ 703-712, July 3, 1918, as amended 1936, 1960, 1968, 1969, 1974, 1978, 1986 and 1989) makes it unlawful to "take" (kill, harm, harass, shoot, etc.) any migratory bird listed in Title 50 of the Code of Federal Regulations, Section 10.13, including their nests, eggs, or young. Migratory birds include geese, ducks, shorebirds, raptors, songbirds, wading birds, seabirds, and passerine birds (such as warblers, flycatchers, swallows, etc.).

Executive Order 13186 for conservation of migratory birds (January 11, 2001) requires that any project with federal involvement address impacts of federal actions on migratory birds. The order is designed to assist federal agencies in their efforts to comply with the MBTA and does not constitute any legal authorization to take migratory birds. The order also requires federal agencies to work with the USFWS to develop a memorandum of understanding (MOU). Protocols developed under the MOU must promote the conservation of migratory bird populations through the following means:

- avoid and minimize, to the extent practicable, adverse impacts on migratory bird resources when conducting agency actions;
- restore and enhance habitat of migratory birds, as practicable; and prevent or abate the pollution or detrimental alteration of the environment for the benefit of migratory birds, as practicable.

9.2.1 Applicability to The Proposed Project

White-tailed kite (*Elanus caeruleus*), red-tailed hawk (*Buteo jamaicensis*), and red-shouldered hawk (*Buteo lineatus*) are all examples of raptors that could nest on or within a zone of influence of the Proposed Project Site. These raptors (birds of prey) would be protected by the Migratory Bird Treaty Act. Also, common songbirds and wading birds that could occur on the site would be protected pursuant to this Act. As long as there is no direct mortality of species protected pursuant to this Act caused by development of the site, there should be no constraints to development. While adult birds can typically fly out of harm's way, nesting birds, their eggs, and young are much more prone to being impacted by construction projects. To comply with the Migratory Bird Treaty Act, all active nest sites would have to be avoided while birds were nesting. Upon completion of the nesting cycle, the Proposed Project could commence as otherwise planned.

In 2017, the Solicitor for the USFWS opined that the MBTA only prohibits intentional take of MBTA-listed species and does not prohibit unintentional take incidental to otherwise lawful activities. Accordingly, it is unlikely that development of the Proposed Project would implicate the take prohibitions under the MBTA. As of March 2019, however, the California Legislature was considering a bill (AB 454) that would make illegal, in California, the incidental take of MBTA-listed birds. The Proposed Project would be unlikely to impact MBTA- listed birds; however, the Proposed Project could impact eggs or nestlings of a MBTA-listed birds without avoidance measures. ***Accordingly, impacts to MBTA-listed birds is regarded as a potentially significant impact. These impacts can be mitigated to a level regarded as less than significant pursuant to the CEQA.*** Please review specific requirements for avoidance of nest sites for potentially occurring species in the Impacts and Mitigations section below.

9.3 **California Endangered Species Act**

9.3.1 SECTION 2081 OF THE CALIFORNIA ENDANGERED SPECIES ACT

In 1984, the state legislated the California Endangered Species Act (CESA) (Fish and Game Code §2050). The basic policy of CESA is to conserve and enhance endangered species and their habitats. State agencies will not approve private or public projects under their jurisdiction that would impact threatened or endangered species if reasonable and prudent alternatives are available. Because CESA does not have a provision for "harm" (see discussion of FESA, above), CDFW considerations pursuant to CESA are limited to those actions that would result in the direct take (or mortality) of a listed species.

If a proposed project would result in mortality to a State listed species, an "incidental take" permit pursuant to §2081 of the Fish and Game Code would be necessary (versus a Federal incidental take permit for federally listed species). CDFW will issue an incidental take permit only if:

1) The authorized take is incidental to an otherwise lawful activity;
2) the impacts of the authorized take are minimized and fully mitigated;
3) measures required to minimize and fully mitigate the impacts of the authorized take:
    a) are roughly proportional in extent to the impact of the taking on the species;
    b) maintain the proposed project applicant's objectives to the greatest extent possible; and,
    c) capable of successful implementation; and,
4) adequate funding is provided to implement the required minimization and mitigation measures and to monitor compliance with, and the effectiveness of, the measures.

No §2081 permit may authorize the take of a species for which the Legislature has imposed strict prohibitions on all forms of "take." These species are listed in several statutes that identify "fully protected" species and "specified birds." *See* Fish and Game Code §§ 3505, 3511, 4700, 5050, 5515, and 5517. If a project is planned in an area where a "fully protected" species or a "specified bird" occurs, an applicant must design the proposed project to avoid all take.

Fish and Game Code §2080.1 allows an applicant who has obtained a "non-jeopardy" federal Biological Opinion pursuant to Section 7 of the FESA, or who has received a federal 10(a) permit (federal incidental take permit) pursuant to the FESA, to submit the federal opinion or permit to CDFW for a determination as to whether the federal document is "consistent" with CESA. If after 30 days CDFW determines that the federal incidental take permit is consistent with state law, and that all state listed species under consideration have been considered in the federal Biological Opinion, then no further permit or consultation is required under CESA for the proposed project. However, if CDFW determines that the federal opinion or permit is not consistent with CESA, or that there are State-listed species that were not considered in the federal Biological Opinion, then the applicant must apply for a state CESA permit under Section 2081(b). Section 2080.1 is of no use if an affected species is state-listed, but not federally listed.

State and federal incidental take permits are issued on a discretionary basis and are typically only authorized if applicants are able to demonstrate that impacts to the listed species in question are

unavoidable and can be mitigated to an extent that the reviewing agency can conclude that the proposed impacts would not jeopardize the continued existence of the listed species under review. Typically, if there would be impacts to a listed species, mitigation that includes habitat avoidance, preservation, and creation of endangered species habitat is necessary to demonstrate that projects would not threaten the continued existence of a species. In addition, management endowment fees are usually collected as part of the agreement for the incidental take permit(s). The endowment is used to manage any lands set-aside to protect listed species, and for biological mitigation monitoring of these lands over (typically) a five-year period.

9.3.2 APPLICABILITY TO THE PROPOSED PROJECT

While California tiger salamander is not expected to be found on the Proposed Project Site, should California tiger salamander be found during the Protocol survey, which will not be completed until May 2020, then the Proposed Project Site would be considered to be occupied by the California tiger salamander. If the Proposed Project Site is determined to be occupied by the California tiger salamander then the Applicant would be required to obtain a CESA 2081(b) Incidental Take Permit from the CDFW in advance of grading the Proposed Project Site.

The Proposed Project Site is known to support small numbers of the State-listed Burke's goldfields on the Preserve portion (eastern portion). Protocol-level surveys for all potentially occurring (based on habitat conditions) State-listed plants and animals have been conducted on the Proposed Project Site and no other State-listed species have been identified (the outcome of the California tiger salamander surveys is pending). No impacts are expected to occur to Burke's goldfields when wetlands are enhanced/created on the Stonebridge Preserve as all populations of Burke's goldfields will be avoided during the creation/enhancement work. Since the pools supporting Burke's goldfields will not be directly impacted by the proposed wetland enhancement/creation on the Stonebridge Preserve, ***there will be no direct impacts to "occupied" Burke's goldfield pools by the Proposed Project. Rather wetlands that will be impacted are regarded as impacting "suitable" vernal pool (rare plant) habitat as discussed in Section 10 below.***

As the Applicant will be collecting the seeds of Burke's goldfields from an offsite donor site, CESA incidental take authority would be required for this action under CESA Section 2081. ***Collection of Burke's goldfield seeds for distribution on the Stonebridge Preserve will significantly increase numbers of endangered Burke's goldfields plants/populations.***

9.4 California Fish and Game Code § 3503, 3503.5, 3511, and 3513

California Fish and Game Code §3503 makes it unlawful to take, possess or "needlessly" destroy the nest or eggs of any bird, although it does not protect the fledged birds themselves. Section 3503.5 (birds of prey), 3511 (fully protected birds), and 3513 (MBTA-listed birds) prohibit the take, possession, and/or destruction of different categories of birds, their nests or eggs. Disturbance that causes nest abandonment and/or loss of reproductive effort (killing or abandonment of eggs or young) is considered "take."

All raptors (that is, hawks, eagles, owls) their nests, eggs, and young are protected under California Fish and Game Code (§3503.5). Additionally, "fully protected" birds, such as the white-tailed kite

and golden eagle (*Aquila chrysaetos*), are protected under California Fish and Game Code (§3511). "Fully protected" birds may not be taken or possessed (that is, kept in captivity) at any time.

9.4.1 APPLICABILITY TO THE PROPOSED PROJECT

Several raptor species and many common passerine bird species could nest on the Proposed Project Site. Preconstruction nesting surveys would have to be conducted for nesting birds to ensure that there is no direct take of these birds, or their eggs or nests, as applicable, during the construction of the Proposed Project.

Any active bird nests that are found during preconstruction surveys would have to be avoided by the Proposed Project. Certain exceptions apply for example for European starling (*Sturnus vulgaris*) nests. Other bird species are also exceptions, but this should be assessed by a qualified biologist at the time an active bird nest is identified within a zone of influence of the Proposed Project Site. Suitable non-disturbance buffers should be established around any active nest site until the nesting cycle has been completed. ***Impacts to nesting birds are regarded as a potentially significant impact. Such impacts could be mitigated to levels regarded as less than significant pursuant to the CEQA.*** More specifics on nesting bird surveys and protection buffers are provided below in the Impacts and Mitigations section.

9.5 City of Santa Rosa General Plan

The *Santa Rosa General Plan 2035* (November 3, 2009) was developed to ensure responsible development within the City of Santa Rosa. This General Plan has various measures designed to protect natural resources within the City of Santa Rosa. In the category, Biological Resources and Waterways, the following goals and policies apply to the Proposed Project Site:

> OSC-D Conserve wetlands, vernal pools, wildlife ecosystems, rare plant habitats, and waterways.
>
> OSC-D-1: Utilize existing regulations and procedures, including Subdivision Guidelines, Zoning, Design Review, and environmental law, to conserve wetlands and rare plants. Comply with the federal policy of no net loss of wetlands using mitigation measures such as:
>
> - Avoidance of sensitive habitat;
> - Clustered development;
> - Transfer of development rights; and/or
> - Compensatory mitigation, such as restoration or creation.
>
> OSC-D-2: Protect high quality wetlands and vernal pools from development or other activities as determined by the Vernal Pool Ecosystem Preservation Plan.
>
> OSC-D-5: Consult with North Coast Regional Water Quality Control Board staff as part of the CEQA process for proposed developments to help them identify wetland and vernal pool habitat that has candidacy for restoration/protection based on actual and potential beneficial uses, and determine appropriate locations for mitigation banking.

OSC-H-4: Require incorporation of native plants into landscape plans for new development, where appropriate and feasible, especially in areas adjacent to open space areas or along waterways.

OSC-B-4: Require that graded areas within new developments be revegetated.

9.5.1 APPLICABILITY TO THE PROPOSED PROJECT

Consistent with General Plan Measures OSC-D-1 and OSC-D-5, the Applicant will follow existing regulations and procedures to permit impacts to wetlands (that is, waters of the United States/State) on the Proposed Project Site and mitigate those impacts (no net loss policy) as stated in the permits issued for the Proposed Project. The Applicant intends to mitigate impacts to waters of the United States/State (wetlands) through various means including onsite preservation and enhancement of seasonal wetlands and purchase of mitigation credits from an authorized mitigation bank. Consistent with General Plan Measure OSC-D-2, the Applicant will preserve and protect approximately half of the wetlands and rare plant habitat onsite by placing the eastern half of the Proposed Project Site in a habitat preserve which will allow for the restoration and enhancement of endangered plant habitat.

Finally, as per OSC-B-4 and OSC-H-4, the proposed development will include native plants in the landscape plans where appropriate and feasible and all graded areas within the development will be revegetated.

9.6 City of Santa Rosa Tree Ordinance

The Santa Rosa City Code, Chapter 17.24, has three articles that pertain to the protection of trees within the City of Santa Rosa to discourage the alteration, removal or relocation of trees, including any heritage, protected, or street tree, without a permit. These articles are discussed below.

Article III – Prohibitions – Tree alteration, removal, relocation-Permit required.

Article III has provisions that protect trees which are defined as any woody plant with a single trunk diameter of four (4) inches or more or a combination of multiple trunks having a total diameter of eight (8) inches or more. This article also protects the following types of trees:

(a) Heritage tree which includes any of the following trees, whether located on public or private property, at a diameter equal to or greater than those listed below:

Species	**Diameter**
Valley oak (*Quercus lobata*)	6
Coast live oak (*Quercus agrifolia*)	18
Black oak (*Quercus kelloggii*)	18
Oregon oak (*Quercus garryana*)	18
Canyon oak (*Quercus chrysolepis*)	18
Blue oak (*Quercus douglasii*)	6
Interior live oak (*Quercus wislizenii*)	18

Coast redwood (*Sequoia sempervirens*)	24
Bay (*Umbellularia californica*)	24
Madrone (*Arbutus menziesii*)	12
Douglas's fir (*Pseudotsuga menziesii*)	24
Red alder (*Alnus rubra*)	18
White alder (*Alnus rhombifolia*)	18
Big leaf maple (*Acer macrophyllum*)	24

(b) Protected tree which means any tree, including a heritage tree, designated to be preserved on an approved development plan or as a condition of approval of a tentative map, a tentative parcel map, or other development.

(c) Street tree which means any tree having a single trunk circumference greater than 6 and one-quarter inches or a diameter greater than 2 inches, a height of more than 6 feet, and one half or more of its trunk is within a public right of way or within 5 feet of the paved portion of a City street or a public side walk.

The following tree species are exempt from the above provisions (except for those that may exist as street trees): acacia, silver maple, poplar, ailanthus, hawthorn, fruitless mulberry, privet, pyracantha, Monterey pine, Monterey cypress, and fruit and nut trees (except walnut trees). A permit is not required for these tree species alteration, removal or relocation.

9.6.1.1 Article IV – Permit Category II – Tree alteration, removal or relocation on property proposed for development-Requirements.

Article IV requires the following:

(a) All development proposals and subdivision applications shall clearly designate all trees and heritage trees on the property by trunk location and accurate outline of the dripline and shall indicate those trees proposed to be altered, removed or relocated. The reasons for the removal of any tree shall be stated in writing. The development plan or tentative subdivision map shall indicate the genus and species, shape, drip-line and trunk circumference of each tree and heritage tree. The owner of the property and person in control of the proposed development shall protect and preserve each tree and heritage tree situated within the site of the proposed development during the period the application for the proposed development is being considered by the City. The proposed development shall be designed so that:

(1) The proposed lots and/or improvements preserve any heritage trees to the greatest possible extent.

(2) The road and lot grades protect heritage trees to the greatest extent possible and the existing grad shall be maintained within each such tree's root zone.

(b) If the Proposed Project is approved, the recordation of the final map or issuance of a grading permit or building permit for the Proposed Project shall constitute a permit to

alter, remove or relocate any trees designated for alteration, removal or relocation upon the project's approved plans. Any change in the trees to altered, removed or relocated as designated on the approved development plan or tentative map shall only be permitted upon the written approval of the Director or, when the Director determines that the proposed change may be substantial, by the Planning Commission.

(c) A tree replacement program that will require the applicant to replace trees and heritage trees approved for removal as part of the approval of the Proposed Project in accordance with subdivision 1; each protected tree removed or damaged shall be replaced in accordance with subdivision 2. For each 6 inches or fraction thereof of the diameter of a tree which was approved for removal, two trees of the same genus and species as the removed tree (or another approved species), each of a minimum 15-gallon container size, shall be planted on the Proposed Project Site. For each 6 inches or fraction thereof of the diameter of a tree which was not approved for removal, four trees of the same genus and species as the removed tree (or another approved species), each of a minimum 15-gallon container size, shall be planted on the Proposed Project Site.

(d) If the development site is inadequate in size to accommodate the replacement trees, the trees shall be planted on public property with the approval of the Director of the City's Recreation and Parks Department. Upon the request of the developer and the approval of the Director, the City may accept an in-lieu payment of $100.00 per 15-gallon replacement tree on the condition that all such payments shall be used for tree-related educational projects and/or planting programs of the City.

(e) The following requirements will apply to any applicant of property upon which a protected tree is located:

(1) Before the start of any clearing, excavation, construction or other work on the site, every protected tree shall be securely fenced off at the "protected perimeter" which shall either be the root zone or other limit as may be established by the City.

(2) If the proposed development, including any site work for the development, will encroach upon the protected perimeter of a protected tree, special measures shall be utilized, to allow the roots to obtain oxygen, water and nutrients as needed. Any excavation, cutting, filling, or compaction of the existing ground surface within the protected perimeter, if authorized at all by the Director, shall be minimized and subject to such conditions as may be imposed by the Director. No significant change in existing ground level shall be made within the dripline of a protected tree.

(3) No oil, gas, chemicals or other substances that may be harmful to trees shall be stored or dumped within the protected perimeter. All brush, earth and other debris shall be removed in a manner which prevents injury to the protected tree.

(4) Underground trenching for utilities shall avoid major support and absorbing tree roots of protected trees. If avoidance is impractical, tunnels shall be made below the roots. Trenches shall be consolidated to USFWS as many units as possible. Trenching

within the drip line of protected trees shall be avoided to the greatest extent possible and shall only be done under the at-site directions of a certified arborist.

(5) No concrete or asphalt paving shall be placed over the root zones of protected trees. No artificial irrigation shall occur within the root zone of oaks.

(6) No compaction of the soil within the root zone of protected trees shall occur.

(7) If the trees proposed to be removed can be economically relocated, the developer shall move the trees to a suitable location on the site shown on the approved plans.

9.6.1.2 Article V – Permit category II – Street trees and plantings on and adjacent to public streets and sidewalks.

Article V pertains to the alteration, removal, and relocation of street trees and entails the following:

(a) As per Section 17-24.075, no tree growing within a planting strip or within any public right-of-way shall be removed or altered by or at the instigation of the abutting property owner or anyone other than a duly authorized officer, agent or employee of the City, except upon issuance of a permit therefore by the Director of Recreation and Parks who may require, as a condition of permitting the removal or alteration of a tree, the posting of security for such work and the planting, at the expense of the permittee, of a tree to replace the one removed from a list approved under Section 17-24.070 of the city code.

(b) As per Section 17-24.080, a permit approved by the Director of Recreation and Parks under the provisions of this article shall be valid for a period of 60 days from its issuance unless a longer term is set forth in the permit. If the work to be done under the permit does not commence prior to the permit's expiration and thereafter expeditiously pursued, the permit shall become null and void.

9.6.2 APPLICABILITY TO THE PROPOSED PROJECT

None of the trees onsite meet the City's definition of a "heritage tree." The coast live oak, which is the only tree onsite which could qualify as a heritage tree (since it is the only native), is less than 18 inches diameter at breast height and thus, would not be regarded as a heritage tree. Similarly, according to the Tree Ordinance, the "following tree species are exempt from the above provisions (except for those that may exist as street trees): acacia, silver maple, poplar, ailanthus, hawthorn, fruitless mulberry, privet, pyracantha, Monterey pine, Monterey cypress, and fruit and nut trees (except walnut trees). A permit is not required for these tree species alteration, removal or relocation." Accordingly, impacts to the existing landscape trees will not require a permit. The eucalyptus trees onsite are a non-native, invasive species and though not mentioned specifically in the City's Tree Ordinance, they would not be protected. There are no designated protected trees or street trees on the Proposed Project Site either. ***No significant impacts would occur to heritage trees or other protected trees from implementation of the Proposed Project.***

10. REGULATORY REQUIREMENTS PERTAINING TO WATERS OF THE UNITED STATES AND STATE

This section presents an overview of the criteria used by the Corps, the RWQCB, the State Water Resources Control Board (SWRCB), and the CDFW to determine those areas within a project area that would be subject to their regulation.

10.1 U.S. Army Corps of Engineers Jurisdiction and Permitting

10.1.1 SECTION 404 OF THE CLEAN WATER ACT

Congress enacted the Clean Water Act "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters" (33 U.S.C. §1251(a)). Pursuant to Section 404 of the Clean Water Act (CWA) (33 U.S.C. 1344), the Corps regulates the disposal of dredged or fill material into "waters of the United States" (33 CFR Parts 328 through 330). This requires project applicants to obtain authorization from the Corps prior to discharging dredged or fill materials into any water of the United States.

In the Federal Register "waters of the United States" are defined as, "...all interstate waters including interstate wetlands...intrastate lakes, rivers, streams (including intermittent streams), wetlands, [and] natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce..." (33 CFR Section 328.3).

Limits of Corps' jurisdiction:

(a) Territorial Seas. The limit of jurisdiction in the territorial seas is measured from the baseline in a seaward direction a distance of three nautical miles. (See 33 CFR 329.12)

(b) Tidal Waters of the United States. The landward limits of jurisdiction in tidal waters:

(1) Extends to the high tide line, or
(2) When adjacent non-tidal waters of the United States are present, the jurisdiction extends to the limits identified in paragraph (c) of this section.

(c) Non-Tidal Waters of the United States. The limits of jurisdiction in non-tidal waters:

(1) In the absence of adjacent wetlands, the jurisdiction extends to the ordinary high water mark, or
(2) When adjacent wetlands are present, the jurisdiction extends beyond the ordinary high water mark to the limit of the adjacent wetlands.
(3) When the water of the United States consists only of wetlands the jurisdiction extends to the limit of the wetland.

Section 404 jurisdiction in "other waters" such as lakes, ponds, and streams, extends to the upward limit of the "ordinary high water mark" (OHWM) or the upward extent of any adjacent wetland. The OHWM on a non-tidal water is:

- the "line on shore established by the fluctuations of water and indicated by physical characteristics such as a clear natural line impressed on the bank; shelving; changes in the character of soil; destruction of terrestrial vegetation; the presence of litter or debris; or other appropriate means that consider the characteristics of the surrounding areas" (33 CFR Section 328.3[e]).

Wetlands are defined as: "...those areas that are inundated or saturated by surface or ground water at a frequency and duration to support a prevalence of vegetation adapted for life in saturated soil conditions" (33 CFR Section 328.8 [b]). Wetlands usually must possess hydrophytic vegetation (i.e., plants adapted to inundated or saturated conditions), wetland hydrology (e.g., topographic low areas, exposed water tables, stream channels), and hydric soils (i.e., soils that are periodically or permanently saturated, inundated or flooded) to be regulated by the Corps pursuant to Section 404 of the Clean Water Act.

10.1.1.1 Clean Water Rule 2015

In 2015, the Environmental Protection Agency (EPA) and the Corps published the Clean Water Rule: Definition of ''Waters of the United States''; Final Rule which defines the scope of waters protected under the CWA. This Final Rule was published in light of the statute, science, Supreme Court decisions in *U.S.* v. *Riverside Bayview Homes, Solid Waste Agency of Northern Cook County* v. *U.S. Army Corps of Engineers (SWANCC),* and *Rapanos* v. *United States (Rapanos)*, and the agencies' experience and technical expertise. The Clean Water Rule reflects consideration of the extensive public comments received on the proposed rule. The Clean Water Rule was stayed in federal court shortly after it was adopted in 2015. In August 2018, the stay was lifted and the Clean Water Rule (Rule) became effective once again and remains in effect today. The Rule ensures protection for the nation's public health and aquatic resources and increases CWA program predictability and consistency by clarifying the scope of "waters of the United States" protected under the Act.

The Rule only protects waters that have been historically covered by the CWA. A tributary, or upstream water, must show physical features of flowing water – a bed, bank, and ordinary high-water mark – to warrant protection. The Rule provides protection for headwaters that have these features and have a significant connection to downstream waters. Adjacent waters are defined by three qualifying circumstances established by the Rule. These can include wetlands, ponds, impoundments, and lakes which can impact the chemical, biological or physical integrity of neighboring waters. All existing exclusions from longstanding agency practices are officially established for the first time. Waters used in normal agricultural, ranching, or silvicultural activities, as well as certain defined ditches, prior converted cropland, and waste treatment systems continue to be excluded from CWA protection.

10.1.1.2 Permitting Corps Jurisdictional Areas

To remain in compliance with Section 404 of the CWA, project proponents and property owners (applicants) are required to be permitted by the Corps prior to discharging or otherwise impacting waters of the United States. In many cases, the Corps must visit a Proposed Project area (to conduct a "jurisdictional determination") to confirm the extent of area falling under their jurisdiction prior to authorizing any permit for that project area. Typically, at the time the

jurisdictional determination is conducted, applicants (or their representative) will discuss the appropriate permit application that would be filed with the Corps for permitting the proposed impact(s) to "waters of the United States."

Pursuant to Section 404, the Corps normally provides two alternatives for permitting impacts to the type of waters of the United States found in the proposed project area. The first alternative would be to use Nationwide Permit(s) (NWP). The second alternative is to apply to the Corps for an Individual Permit (33 CFR Section 235.5(2)(b)). The application process for Individual Permits is extensive and includes public interest review procedures (i.e., public notice and receipt of public comments) and must contain an "alternatives analysis" that is prepared pursuant to Section 404(b) of the Clean Water Act (33 U.S.C. 1344(b)). The alternatives analysis is also typically reviewed by the federal EPA and thus brings another resource agency into the permitting framework. Both the Corps and EPA take the initial viewpoint that there are practical alternatives to the proposed project if there would be impacts to waters of the U.S., and the proposed permitted action is not a water dependent project (e.g., a pier or a dredging project). Alternative analyses therefore must provide convincing reasons that the proposed permitted impacts are unavoidable. Individual Permits may be available for use in the event that discharges into regulated waters fail to meet conditions of NWP(s).

NWPs are a type of general permit administered by the Corps and issued on a nationwide basis that authorize minor activities that affect Corps regulated waters. Under NWP, if certain conditions are met, the specified activities can take place without the need for an individual or regional permit from the Corps (33 CFR, Section 235.5[c][2]). Because impacts to waters of the U.S. will exceed 0.5-acre, the proposed project will not meet conditions for use of NWPs.

Prior to finalizing design plans, the applicant needs to be aware that the Corps maintains a policy of "no net loss" of wetlands (waters of the United States) from project area development. Therefore, it is incumbent upon applicants that propose to impact Corps regulated areas to submit a mitigation plan that demonstrates that impacted regulated areas would be recreated (*i.e.,* impacts would be mitigated). Typically, the Corps requires mitigation to be "in-kind" (i.e., seasonal wetlands would be filled, mitigation would include seasonal wetland mitigation), and at a minimum of a 1:1 replacement ratio (i.e., one acre or fraction there of recreated for each acre or fraction thereof lost). Often a 2:1 replacement ratio is required if the Permittee is responsible for the mitigation. In some cases, the Corps allows "out-of-kind" mitigation if the compensation site has greater value than the impacted site. Finally, there are many Corps approved wetland mitigation banks where wetland mitigation credits can be purchased by applicants to meet mitigation compensation requirements. Mitigation banks have defined service areas and the Corps may only allow their use when a project would have minimal impacts to wetlands.

10.1.2 Applicability to the Proposed Project

Laurence P. Stromberg, Ph.D. prepared a *Pre-Jurisdictional Determination* of the Proposed Project Site that was field verified by the Corps on January 25, 2016. The Corps' approved Administrative Jurisdictional Determination letter is dated March 9, 2016 and the map is stamped March 7, 2016 (Attachment G). The Corps verified 6.31 acres of seasonal wetlands on the Proposed Project Site. An Individual Permit application was submitted to the San Francisco District of the Corps during the validity period of the Corps' jurisdictional determination, and

hence, by Corps' policy, this map will remain valid while the permit application is processed by the Corps.

The Proposed Project will result in the fill of 2.52 acres of seasonal wetlands. In addition, 0.13-acre of seasonal wetlands would be permanently filled within the Stonebridge Preserve as necessary to enhance the functions and services of wetlands in the Stonebridge Preserve (total = 2.65 acres of permanent fill). Specifically, wetland hydrology that currently pools against the adjacent development's retaining walls will be recontoured into a naturalistic vernal pool configuration and this will require filling 0.13-acre of the 3.79 acres of wetlands that currently occur in the proposed Stonebridge Preserve. Finally, 0.484-acre of existing seasonal wetland in the Stonebridge Preserve that currently supports Burke's goldfields will be avoided/protected during the implementation of the wetland creation/enhancement project.

To meet the Corps' policy of "no net loss" approximately 1.766 acres of new wetlands are proposed to be created in existing upland habitats in the Stonebridge Preserve. In addition, the Applicant will purchase 0.89-acre of wetland credits from a Corps (and RWQCB) approved Wetland Mitigation Bank. The total creation plus purchase of credit, totals 2.65 acres and meets the Corps no net loss policy or 1:1 impact to mitigation ratio.

In addition, approximately 3.267 acres of existing wetland will be recontoured (enhanced) to improve hydrology and functions such that the enhanced wetlands will promote/support colonization by the state and federally listed vernal pool plant Burke's goldfields. In total, after the enhancement, the Stonebridge Preserve that currently supports 3.79 acres of wetlands will support 5.52 acres of enhanced wetlands. Enhancing 3.267 acres of wetlands exceeds a 1:1 impacts to mitigation ratio. Thus, in consideration that the project will not result in "no net loss" (1:1 ratio) and will enhance 3.267 acres (exceeds 1:1 impacts to enhancement ratio), taken together the Proposed Project will exceed a 2:1 overall replacement/enhancement to impacts ratio.

The Proposed Project would include the permanent loss of 2.65 acres of seasonal wetlands. ***These impacts are regarded as significant pursuant to the CEQA. Mitigation would be implemented that would reduce impacts to waters of the U.S. to levels regarded as less than significant.*** For further details regarding impacts and mitigation for impacts to wetlands please review the Impacts and Mitigation Section below.

10.2 California Regional Water Quality Control Board (RWQCB)

10.2.1 Section 401 of the Clean Water Act

The SWRCB and RWQCB regulate activities in "waters of the State" (which includes wetlands) through Section 401 of the Clean Water Act. While the Corps administers a permitting program that authorizes impacts to waters of the United States, including wetlands and other waters, any Corps permit authorized for a Proposed Project would be inoperative unless it is an NWP that has been certified for use in California by the SWRCB, or if the RWQCB has issued a project specific certification of water quality. Certification of NWPs requires a finding by the SWRCB that the activities permitted by the NWP will not violate water quality standards individually or cumulatively over the term of the permit (the term is typically for five years). Certification must be

consistent with the requirements of the federal Clean Water Act, the California Environmental Quality Act, the California Endangered Species Act, and the SWRCB's mandate to protect beneficial uses of waters of the State. Any denied (i.e., not certified) NWPs, and all Individual Corps permits, would require a project specific RWQCB certification of water quality. Where a project will result in dredge or fill of non-federal waters of the State, the RWQCB will authorize those fills through waste discharge requirements issued under the Porter Cologne Water Quality Control Act.

On April 2, 2019, the State Water Resources Control Board adopted a state-level definition of "wetlands," which is broader than the federal definition in that unvegetated areas may be considered a wetland water of the State. As a part of the same policy, the Water Board adopted permit procedures and standards governing the discharge of dredged or fill material into wetlands and other waters of the State. The policy includes, among other things, requirements for analyses to identify the least environmentally damaging practicable alternative (LEDPA) and compensatory mitigation standards including a minimum 1:1 ratio for wetlands and streams, and full functional replacement of all waters on top of this minimum where applicable. The policy, which will govern both Section 401 certifications and WDRs, is scheduled to become effective nine months following the completion of review by the California Office of Administrative Law.

10.2.2 APPLICABILITY TO THE PROPOSED PROJECT

The Corps has taken jurisdiction over 6.31 acres of waters of the United States on the Proposed Project Site which are all seasonal wetlands. Since the RWQCB does not have a formal method for technically defining what constitutes waters of the State, the RWQCB is expected to remain consistent with the Corps' determination. Any Clean Water Act Section 404 permit authorized by the Corps for the Proposed Project would be inoperative without also obtaining authorization from the RWQCB pursuant to Section 401 of the Clean Water Act (i.e., without obtaining a certification of water quality).

The Proposed Project would include the permanent loss of 2.65 acres of seasonal wetlands. ***These impacts are regarded as significant pursuant to the CEQA. Mitigation would be implemented that would reduce impacts to waters of the State to levels regarded as less than significant.***

Any impacts to waters of the State would be required to be mitigated to the satisfaction of the RWQCB prior to the time this resource agency would issue a permit for impacts to such features. The RWQCB requirements for issuance of a "401 Permit" typically parallel the Corps requirements for permitting impacts to Corps regulated areas pursuant to Section 404 of the Clean Water Act. Please refer to the Corps' "Applicability" section above for likely mitigation requirements for impacts to RWQCB regulated wetlands. Also, please refer to the applicability section of the Porter-Cologne Water Quality Control Act below for other applicable actions that may be imposed on the Proposed Project by the RWQCB prior to the time any certification of water quality is authorized for the Proposed Project. Finally, please review the Impacts and Mitigation Section below for complete information about impacts and mitigation measures that would be implemented by the Proposed Project.

10.2.3 PORTER-COLOGNE WATER QUALITY CONTROL ACT

The uncontrolled discharge of pollutants into impaired water bodies is considered particularly detrimental. According to the U.S. Environmental Protection Agency (USEPA), *sediment is one of the most widespread pollutants contaminating U.S. rivers and streams.* Sediment runoff from construction sites is 10 to 20 times greater than from agricultural lands and 1,000 to 2,000 times greater than from forest lands (EPA 2005). Consequently, the discharge of stormwater from large construction sites is regulated by the RWQCB under the federal CWA and California's Porter-Cologne Water Quality Control Act.

The Porter-Cologne Water Quality Control Act, Water Code § 13260, requires that "any person discharging waste, or proposing to discharge waste, that could affect the waters of the State to file a report of discharge" with the RWQCB through an application for waste discharge (Water Code Section 13260(a)(1). The term "waters of the State" is defined as any surface water or groundwater, including saline waters, within the boundaries of the State (Water Code § 13050(e)). It should be noted that pursuant to the Porter-Cologne Water Quality Control Act, the RWQCB also regulates "isolated wetlands," or those wetlands considered to be outside of the Corps' jurisdiction pursuant to the SWANCC decision (see Corps Section above).

The RWQCB generally considers filling in waters of the State to constitute "pollution." Pollution is defined as an alteration of the quality of the waters of the state by waste that unreasonably affects its beneficial uses (Water Code §13050(1)). The RWQCB litmus test for determining if a project should be regulated pursuant to the Porter-Cologne Water Quality Control Act is whether the action could result in any "threat" to water quality.

The RWQCB requires complete pre- and post-development Best Management Practices Plan (BMPs) of any portion of the Proposed Project Site that is developed. This means that a water quality treatment plan for the pre- and post-developed project site must be prepared and implemented. Preconstruction requirements must be consistent with the requirements of the National Pollutant Discharge Elimination System (NPDES). That is, a *Stormwater Pollution Prevention Plan* (SWPPP) must be developed prior to the time that a site is graded (see NPDES section below). In addition, a post construction BMPs plan, or a Stormwater Management Plan (SWMP) must be developed and incorporated into any site development plan.

10.2.4 APPLICABILITY TO THE PROPOSED PROJECT

The Corps has taken jurisdiction over 6.31 acres of waters on the Proposed Project Site. There are no isolated wetlands or other waters on the Project Site that are outside of the RWQCB's Clean Water Act jurisdiction (see Attachment G).

Prior to issuance of any permit from the RWQCB, this agency will require submittal of a Notice of Determination from the City of Santa Rosa indicating that the Proposed Project has completed environmental review pursuant to CEQA. The pertinent sections of the CEQA document (typically the biology section) are often submitted to the RWQCB for review prior to the time this agency will issue a permit for a proposed project.

Since any "threat" to water quality could conceivably be regulated by the RWQCB or the SWRCB pursuant to the Porter-Cologne Water Quality Control Act, care will be required when

constructing the Proposed Project to be sure that adequate pre and post construction Best Management Practices Plan (BMPs) are incorporated into the Proposed Project implementation plans. Such BMPs, if correctly installed and maintained, are likely to keep the Proposed Project in compliance with the Porter-Cologne Water Quality Control Act.

All stormwater runoff currently flows into the city's existing storm drain system. It is expected that project development will utilize the existing storm drain system; however, pre-treatment of stormwater in accordance with Provision C.3 (discussed in the section below) prior to release into the County stormdrain system will be necessary. Additionally, during project construction it is important for the Proposed Project proponent to have the components of a stormwater pollution prevention plan (SWPPP) and a stormwater low impact development (SW LID) in place; these documents are typically prepared by the Proposed Project civil engineer. Refer to the sections below for further discussion on site disturbance (grading) and storm water management.

11. STATE WATER RESOURCES CONTROL BOARD (SWRCB)/RWQCB – STORM WATER MANAGEMENT

11.1 Construction General Permit

While federal CWA NPDES regulations allow two permitting options for construction related stormwater discharges (individual permits and general permits), the SWRCB has elected to adopt only one statewide Construction General Permit at this time that will apply to all stormwater discharges associated with construction activity, except from those on Tribal Lands, in the Lake Tahoe Hydrologic Unit, and those performed by the California Department of Transportation (CalTrans).

The Construction General Permit requires all dischargers where construction activity disturbs greater than one acre of land or those sites less than one acre that are part of a common plan of development or sale that disturbs more than one acre of land surface to:

1. Develop and implement a SWPPP that specifies Best Management Practices (BMPs) that will prevent all construction pollutants from contacting stormwater with the intent of keeping all products of erosion from moving off site into receiving waters.

2. Eliminate or reduce non-stormwater discharges to storm sewer systems and other waters of the nation. Achieve quantitatively-defined (i.e., numeric) pollutant-specific discharge standards, and conduct much more rigorous monitoring based on the Proposed Project's projected risk level.

3. Perform inspections of all BMPs.

This Construction General Permit is implemented and enforced by the nine RWQCBs. It is also enforceable through citizens' suits and represents a dramatic shift in the State Water Board's approach to regulating new and redevelopment sites, and imposing new affirmative duties and fixed standards on builders and developers.

Types of Construction Activity Covered by the Construction General Permit

- Clearing,
- Grading, and/or
- Disturbances to the ground such as stockpiling or excavation that results in soil disturbances of at least one acre or more of total land area.

Construction activity that results in soil disturbances to a smaller area would still be subject to this General Permit if the construction activity is part of a larger common plan of development that encompasses greater than one acre of soil disturbance, or if there is significant water quality impairment resulting from the activity.

Construction activity does not include:

- Routine maintenance to maintain original line and grade,
- Hydraulic capacity, or original purpose of the facility,
- Nor does it include emergency construction activities required to protect public health and safety.

The Construction General Permit includes several "post-construction" requirements to ensure that site designs provide no net increase in overall site runoff and match pre-project hydrology by maintaining runoff volume and drainage concentrations. To achieve the required results where impervious surfaces such as roofs and paved surfaces are being increased, developers must implement non-structural off-setting BMPs, such as landform grading, site design BMPs, and distributed structural BMPs (e.g., bioretention cells, rain gardens, and rain cisterns). This "runoff reduction" approach is essentially a State Water Board-imposed regulatory requirement to implement Low Impact Development ("LID") design features. Volume that cannot be addressed using non-structural BMPs must be captured in structural BMPs that are approved by the RWQCB.

Improving the quality of site runoff is necessary to improve water quality in impaired and threatened streams, rivers, and lakes (that is, water bodies on the EPA's 303(d) list). The RWQCB prioritizes the water bodies on the 303(d) list according to potential impacts to beneficial uses. Beneficial uses can include a wide range of uses, such as nautical navigation; wildlife habitat; fish spawning and migration; commercial fishing, including shellfish harvesting; recreation, including swimming, surfing, fishing, boating, beachcombing, and more; water supply for domestic consumption or industrial processes; and groundwater recharge, among others. The State is required to develop action plans and establish Total Maximum Daily Loads (TMDLs) to improve water quality within these impaired water bodies. The TMDL is the quantity of a pollutant that can be safely assimilated by a water body without violating the applicable water quality standards.

Pursuant to the CWA, the RWQCB regulates construction discharges under the National Pollutant Discharge Elimination System (NPDES). The project sponsor of construction or other

activities that disturb more than 1 acre of land must obtain coverage under NPDES Construction General Permit Order 2009-0009-DWQ, administered by the RWQCB[1].

11.1.1 APPLICABILITY TO THE PROPOSED PROJECT

The Proposed Project will impact greater than one acre and thus, must obtain NPDES coverage via acquisition of coverage under the General Construction Permit. To obtain coverage under the SWRCB administered Construction General Permit, the applicant (typically through its civil engineer) must electronically file a number of permit-related compliance documents (Permit Registration Documents (PRDs), including a Notice of Intent (NOI), a risk assessment, site map, signed certification, SWPPP, Notice of Termination (NOT), NAL exceedance reports, and other site-specific PRDs that may be required. The PRDs must be prepared by a Qualified SWPPP Practitioner (QSP) or Qualified SWPPP Developer (QSD) and filed by a Legally Responsible Person (LRP) on the RWQCB's Stormwater Multi-Application Report Tracking System (SMARTS). (QSDs are typically civil engineers, professional hydrologists, engineering geologists, or landscape architects.) Once filed, these documents become immediately available to the public for review and comment. At a minimum, the SWPPP shall identify Best Management Practices (BMPs) for implementation during project construction that are in accordance with the applicable guidance and procedures contained in the California Stormwater Quality Association's *California Stormwater Best Management Practices Handbook* (2015).

11.2 RWQCB Municipal Storm Water Permitting Programs

The federal Clean Water Act (CWA) was amended in 1987 to address urban stormwater runoff pollution of the nation's waters. In 1990, the U.S. Environmental Protection Agency (USEPA) promulgated rules establishing Phase 1 of the National Pollutant Discharge Elimination System (NPDES) stormwater program. The Phase 1 program for Municipal Separate Storm Sewer System (MS4s) requires operators that serve populations of 100,000 or greater to implement a stormwater management program to control polluted discharges from these MS4s. While Phase 1 of the municipal stormwater program has focused on large urban areas, Phase 2 of the municipal stormwater program was promulgated by the USEPA for smaller urban areas including non-traditional Small MS4s, which are governmental facilities such as military bases, public campuses, and prison and hospital complexes.

MS4 permits require the discharger (or dischargers that are permitted by the MS4 permittees) to develop and implement a Storm Water Management Plan/Program (SWMP) with the goal of reducing the discharge of pollutants to the maximum extent practicable (MEP). MEP is the performance standard specified in Section 402(p) of the CWA. The management programs specify what BMPs will be used to address certain program areas. The program areas include public education and outreach; illicit discharge detection and elimination; construction and post-construction; and good housekeeping for municipal operations. In general, medium and large municipalities are required to conduct chemical monitoring, though small municipalities are not.

[1] CGP Order 2009-0009-DWQ remains in effect, but has been amended by CGP Order 2009-0014-DWQ, effective February 14, 2011, and CGP Order 2009-0016-DWQ, effective July 17, 2012. The first amendment merely provided additional clarification to Order 2009-0009-DWQ, while Order 2009-0016-DWQ eliminated numeric effluent limits on pH and turbidity (except in the case of active treatment systems), in response to a legal challenge to the original order.

11.2.1 NPDES C.3 REQUIREMENTS

The NPDES C.3 requirements went into effect for any project (public or private) that is "deemed complete" by the city or county (Lead Agency) on or after February 15, 2005, and which will result in the creation or replacement (other than normal maintenance) of at least 10,000 square feet of impervious surface area (e.g., roofs, streets, patios, parking lots, etc.). Provision C.3 requires the onsite treatment of stormwater prior to its discharge into downstream receiving waters. Note that these requirements are in addition to existing NPDES requirements for erosion and sedimentation controls during project construction that are typically addressed through acquisition of coverage under the SWRCB administered Construction General Permit. The C.3 requirements are typically required to be implemented by MS4 permittees (and their constituencies).

Projects subject to Provision C3 must include the capture and onsite treatment of all stormwater from the site prior to its discharge, including rainwater falling on building rooftops. Project applicants are required to implement appropriate source control and site design measures and to design and implement stormwater treatment measures in order to reduce the discharge of stormwater pollutants to the *maximum extent practicable.* While the CWA does not define "maximum extent practicable," the Stormwater Quality Management Plans required as a condition of the municipal NPDES permits identify control measures (known as BMPs) and, where applicable, performance standards, to establish the level of effort required to satisfy the maximum extent practicable criterion. It is ultimately up to the professional judgment of the reviewing municipal staff in the individual jurisdictions to determine whether a project's proposed stormwater controls will satisfy the maximum extent practicable criterion; however, there are numeric criteria used to ensure that treatment BMPs have been adequately sized to accommodate and treat a site's stormwater. The C3 requirements are quite extensive, and their complete explanation is not provided here. However, the following are minimums that should be understood and adhered to:

- The applicant must provide a detailed and realistic site design *and impervious surface area calculations*. This site design *and calculations* will be used by the Lead Agency (county or city) to determine/*verify* the amount of impervious surface area that is being created or replaced. It should include all proposed buildings, roads, walkways, parking lots, landscape areas, etc., that are being created or redeveloped. If large lots (greater than 10,000 square feet) are being created an effort will need to be made to determine the total impervious surface area that could be created on that parcel. For example if only a portion of the lot is shown as a "building envelope" then the Lead Agency will need to consider that a driveway will have to be constructed to access the envelope and that the envelope will then be developed as shown. If the C.3 thresholds are met (creation/redevelopment of 10,000 square feet of impervious surface area), a Stormwater Control Plan (SWCP) (if required by the Lead Agency, or whatever steps for compliance with Provision C3 are required locally) must accompany the application.

- If a SWCP is required by the Lead Agency for the Proposed Project it must be stamped by a Licensed Civil Engineer, Architect, or Landscape Architect.

11.2.2 APPLICABILITY TO THE PROPOSED PROJECT

The Water Board issued county-wide municipal stormwater permits in the early 1990s to operators of MS4s. On November 19, 2015, the Water Board re-issued these county-wide municipal stormwater permits as one Municipal Regional Stormwater NPDES Permit to regulate stormwater discharges from municipalities and local agencies. Permittees in the San Francisco Bay area are included in a Municipal Regional Permit (MRP), issued to 76 cities, counties and flood control districts in 2009 and revised in 2015. Each of the Permittee's must file an Annual Report that is comprised of three parts: regional, countywide, and individual.

The City of Santa Rosa is an MS-4 permittee. It is the applicant's responsibility to ensure that the Proposed Project's civil engineer prepares all required Storm Water Planning documents for submittal to the City of Santa Rosa to comply with its MS4 permit requirements. In 2017, the City of Santa Rosa released "The Storm Water Low Impact Development Technical Design Manual" (SW LID Manual). The SW LID Manual provides technical guidance for project designs that require the implementation of permanent storm water BMPs. The intent of this manual is to provide design guidance to mitigate negative water quality impacts due to development and otherwise to ensure projects meet the City's MS-4 reporting requirements. The SW LID Manual supersedes both the 2005 SUSMP Guidelines and the 2011 version of this SW LID Manual, both of which similarly provided earlier guidance to the development community, ensuring project compliance with the NPDES and the city's MS-4 requirements.

In addition, as the Proposed Project includes a requirement to obtain a CWA Section 401 permit from the RWQCB, a Storm Water Management Plan prepared in compliance with the SW LID must be submitted to the RWQCB with the application package submitted for acquisition of a Section 401 permit (aka "water quality certification").

11.3 California Department of Fish and Wildlife Protections

11.3.1 SECTION 1602 OF CALIFORNIA FISH AND GAME CODE

Pursuant to Section 1602 of the California Fish and Game Code: "An entity may not substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake, or deposit or dispose of debris, waste, or other material containing crumbled, flaked, or ground pavement where it may pass into any river, stream, or lake, unless "CDFW receives written notification regarding the activity in the manner prescribed by CDFW." The notification shall include, but is not limited to, all of the following:

(A) A detailed description of the Proposed Project's location and a map.
(B) The name, if any, of the river, stream, or lake affected.
(C) A detailed project description, including, but not limited to, construction plans and drawings, if applicable.
(D) A copy of any document prepared pursuant to Division 13 (commencing with Section 21000) of the Public Resources Code.
(E) A copy of any other applicable local, state, or federal permit or agreement already issued.
(F) Any other information required by CDFW (Fish & Game Code 2016).

Refer to Section 1602 of the current California Fish and Game Code for further details.

Also note that, while not stated in the regulations above, CDFW typically considers its jurisdiction to include riparian vegetation (that is, the trees and bushes growing along the stream). Thus, any proposed activity in a natural stream channel that would substantially adversely affect an existing fish and/or wildlife resource, including its riparian vegetation, would require entering into a Streambed Alteration Agreement (SBAA) with CDFW prior to commencing with work in the stream. However, prior to authorizing such permits, CDFW typically reviews an analysis of the expected biological impacts, and any proposed mitigation plans that would be implemented to offset biological impacts and engineering and erosion control plans.

11.3.2 Applicability to The Proposed Project

There are no streams or drainages on or adjacent to the Proposed Project Site that would be subject to regulation by CDFW pursuant to Section 1602 of the Fish and Game Code. Hence, an SBAA with CDFW is not required for the Proposed Project.

12. CALIFORNIA ENVIRONMENTAL QUALITY ACT (CEQA) REGULATIONS

A CEQA Lead Agency must determine if a proposed activity constitutes a project requiring further review pursuant to CEQA. Pursuant to CEQA, a Lead Agency would have to determine if there could be significant adverse impacts to the environment from a proposed project. Typically, if within the city limits, the city would be the CEQA Lead Agency. If a discretionary permit (i.e., conditional use permit) would be required for a project (e.g., an occupancy permit must be issued), the Lead Agency typically must determine if there could be significant environmental impacts. This is usually accomplished by an "Initial Study." If there could be significant environmental impacts, the Lead Agency must determine an appropriate level of environmental review prior to approving and/or otherwise permitting the impacts. In some cases, there are "Categorical Exemptions" that apply to the proposed activity; thus, the activity is exempt from CEQA. The Categorical Exemptions are provided in CEQA. There are also Statutory Exemptions in CEQA that must be investigated for any proposed project.

If the proposed project is not exempt from CEQA, the lowest level of review typically reserved for projects with no significant effects on the environment would be for the Lead Agency to prepare a "Negative Declaration." If a proposed project would have only minimal impacts that can be mitigated to a level of no significance pursuant to CEQA, then a "Mitigated Negative Declaration" is typically prepared by the Lead Agency. Finally, those projects that may have significant effects on the environment, or that have impacts that can't be mitigated to a level considered less than significant pursuant to CEQA, typically must be reviewed via an Environmental Impact Report (EIR). All CEQA review documents are subject to public circulation and comment periods.

Section 15380 of CEQA defines "endangered" species as those whose survival and reproduction in the wild are in immediate jeopardy from one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, disease, or other factors. "Rare" species are defined by CEQA as those who are in such low numbers that they could become endangered if

their environment worsens; or the species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered "threatened" as that term is used in FESA. The CEQA Guidelines also state that a project will normally have a significant effect on the environment if it will "substantially affect a rare or endangered species of animal or plant or the habitat of the species." The significance of impacts to a species under CEQA, therefore, must be based on analyzing actual rarity and threat of extinction to that species despite its legal status or lack thereof.

12.1.1 APPLICABILITY TO THE PROPOSED PROJECT

This report has been prepared as a Biology section that is suitable for incorporation by the CEQA Lead Agency (in this case, the City of Santa Rosa) into a CEQA review document such as a Mitigated Negative Declaration or an Environmental Impact Report. This document addresses potential impacts to species that would be defined as endangered or rare pursuant to Section 15380 of the CEQA.

13. IMPACTS ANALYSIS

Below the criteria used in assessing impacts to Biological Resources is presented.

13.1 Significance Criteria

A significant impact is determined using CEQA and CEQA Guidelines. Pursuant to CEQA §21068, a significant effect on the environment means a substantial, or potentially substantial, adverse change in the environment. Pursuant to CEQA Guideline §15382, a significant effect on the environment is further defined as a substantial, or potentially substantial, adverse change in any of the physical conditions within the area affected by the proposed project including land, air, water, minerals, flora, fauna, ambient noise, and objects of historical or aesthetic significance. Other Federal, State, and local agencies' considerations and regulations are also used in the evaluation of significance of proposed actions.

Direct and indirect adverse impacts to biological resources are classified as "significant," "potentially significant," or "less than significant." Biological resources are broken down into four categories: vegetation, wildlife, threatened and endangered species, and regulated "waters of the United States" and/or stream channels.

13.1.1 THRESHOLDS OF SIGNIFICANCE

13.1.1.1 Plants, Wildlife, Waters

In accordance with Appendix G (Environmental Checklist Form) of the CEQA Guidelines, implementing the Proposed Project would have a significant biological impact if it would:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.

- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or USFWS.

- Have a substantial adverse effect on federally protected "wetlands" as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

- Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

13.1.1.2 Waters of the United States and State.

Pursuant to Section 404 of the CWA (33 U.S.C. 1344), the Corps regulates the discharge of dredged or fill material into waters of the United States, which includes wetlands, as discussed in the bulleted item above, and also includes "other waters" (stream channels, rivers) (33 CFR Parts 328 through 330). Substantial impacts to Corps regulated areas on a project site would be considered a significant adverse impact. Similarly, pursuant to Section 401 of the Clean Water Act, and to the Porter-Cologne Water Quality Control Act, the RWQCB regulates impacts to waters of the State. Thus, substantial impacts to RWQCB regulated areas on a project site would also be considered a significant adverse impact.

13.1.1.3 Stream Channels

Pursuant to Section 1602 of the California Fish and Game Code, CDFW regulates activities that divert, obstruct, or alter stream flow, or substantially modify the bed, channel, or bank of a stream which CDFW typically considers to include riparian vegetation. Any proposed activity that would result in substantial modifications to a natural stream channel would be considered a significant adverse impact.

14. IMPACT ASSESSMENT AND PROPOSED MITIGATION

In this section potential impacts to sensitive biological resources are discussed, including special-status plants and waters of the United States/State in accordance with Appendix G of the CEQA Guidelines. We follow each impact with a mitigation prescription that when implemented would reduce impacts to the greatest extent possible. This impact analysis is based on a Site Plan prepared by Civil Design Consultants, Inc. in February 2019 (Attachment A: Proposed Project Site Plan).

Appendix G – Checklist Items are listed below. Where there would be significant impacts to checklist categories, these impacts and required mitigation measures are fully discussed below.

Would the Proposed Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS?

Yes, impacts and mitigations are detailed below.

Would the Proposed Project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or USFWS?

No. There is no riparian habitat or sensitive natural community on the project site that has been identified in local or regional plans, policies, regulations, or by the CDFW or USFWS. Therefore, the Proposed Project would not have a substantial adverse effect on any riparian habitat or other sensitive natural community.

Would the Proposed Project have a substantial adverse effect on state or federally protected "wetlands" (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Yes, impacts and mitigations are detailed below.

Would the Proposed Project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

No. The Proposed Project would not adversely impact or interfere with wildlife movement corridors. The project site is an open grassland/seasonal wetland mosaic habitat that is surrounded by developed properties on three sides (to the north, south, and east). Though there are some small parcels to the northeast and east that are either designated open space (the Woodbridge Preserve) or currently undeveloped (the Kerry Ranch parcels), these properties abut already developed lands and do not provide a large swath of contiguous, open land that serves as a wildlife movement corridor. To the immediate west of the Proposed Project Site is Fulton Road, a heavily traveled and highly trafficked road which is an impediment to wildlife

movements and removes any wildlife corridor function/value to wildlife originating west of the Proposed Project Site.

Would the Proposed Project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No, there are no heritage trees, protected trees, or street trees onsite. There are no other local policies or ordinances with which this project would conflict.

Would the Proposed Project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No, there are no Habitat Conservation Plans or Natural Community Conservation Plans in force in the City of Santa Rosa.

14.1 Impacts and Mitigation Measures

14.1.1 Impact BIO-1. Development of the Proposed Project Would Have A Significant Adverse Impact on Suitable Vernal Pool (Rare Plant) Habitat (Significant).

As detailed in this report, several years of special-status plant surveys have been conducted on the project site pursuant to all required CDFW, USFWS, and CNPS Guidelines. Only one CEQA-protected, special-status plant was identified during surveys. A small number of Burke's goldfields were found in isolated pools within the proposed Stonebridge Preserve. Burke's goldfields is a federally-listed and State-listed endangered species that is protected pursuant to both the FESA and the CESA (respectively).

Wetlands where the Burke's goldfields occur within the proposed Stonebridge Preserve are hydrologically isolated from the seasonal wetlands on the western portion of the Proposed Project Site by a naturally occurring watershed break. The residential subdivision component of the Proposed Project has been proposed to occur in a separate micro-watershed than the proposed Stonebridge Preserve to avoid impacting endangered plants. The proposed residential area has a westward breaking watershed, while the proposed Stonebridge Preserve has a watershed that breaks eastward. As the Burke's goldfield colonies only occur within the proposed Stonebridge Preserve, and as these pools will not be directly impacted by proposed wetland enhancement/ creation in the Stonebridge Preserve, ***there will be no direct impacts to occupied Burke's goldfield pools by the Proposed Project. Rather wetlands that will be impacted (by both the development and the wetland enhancement) are regarded as impacting "suitable" vernal pool (rare plant) habitat.***

Approximately 2.65 acres of "suitable" vernal pool (rare plant) habitat will be impacted by the Proposed Project. As detailed in the USFWS' *Programmatic Biological Opinion for U.S. Army Corps of Engineers Permitted Projects that Affect the California Tiger Salamander and Three Endangered Plant Species on the Santa Rosa Plain, California* (USFWS 2007) projects are required to mitigate impacts to suitable vernal pool habitat via preservation of vernal pool habitats. While this project will not rely on use of this Programmatic Biological Opinion, it

nonetheless presents USFWS' regulatory requirements for projects that impact suitable vernal pool habits on the Santa Rosa Plain.

Impacts to "suitable" vernal pool (rare plant) habitat in the Santa Rosa Plain is a significant and adverse impact. This impact would be mitigated to a less than significant level pursuant to CEQA based on the wetlands preservation/restoration and enhancement proposed at the Stonebridge Preserve.

14.1.2 MITIGATION MEASURE BIO-1. FOR IMPACTS TO SUITABLE VERNAL POOL (RARE PLANT) HABITAT

The Proposed Project will mitigate impacts to 2.65 acres of suitable vernal pool (rare plant) habitat via: (1) the creation of 1.766 acres of new vernal pool habitat on the proposed Stonebridge Preserve; (2) the enhancement of an additional 3.267 acres of wetlands in the proposed Stonebridge Preserve; and (3) avoidance/preservation of 0.484-acre of wetlands in the proposed Stonebridge Preserve that support a small number of Burke's goldfield plants (0.484-acre of "occupied" habitat). These actions together will create a total of 5.52 acres of vernal pools that will provide optimal conditions for supporting colonization by Burke's goldfields. The proposed enhancements will emulate similar enhancements at the immediately adjacent Woodbridge Preserve that now supports abundant Burke's goldfield colonies (see photographic proof at Attachment D). This is approximately a 2.1:1 mitigation to impacts ratio which exceeds requirements for plant establishment mitigation for impacts to "suitable" vernal pool (rare plant) habitats as presented in the USFWS' *Santa Rosa Plain Programmatic Biological Opinion* (USFWS 2007).

Pursuant to the USFWS' requirements, compensation mitigation that is required for impacts to "suitable" vernal pool (rare plant) habitat is replacement via 1:1 "occupied or established habitat" (any combination) with success criteria met prior to groundbreaking at a project site and 0.5:1 "established habitat" credit with success criteria met prior to ground breaking. Or, instead, applicants may also mitigate impacts through acquisition and permanent protection of occupied and suitable special-status plant habitats ("conserved land") as permitted by the USFWS (and CDFW). The conserved land must also have a USFWS and CDFW-approved management plan and a non-wasting endowment fund must be established to provide for the in-perpetuity management of the conserved land.

In pre-application meetings with the USFWS and CDFW, these agencies agreed that the proposed mitigation plan for the Proposed Project meets their criteria for Burke's goldfields mitigation on the Santa Rosa Plain.

A mitigation compliance report shall be submitted to the City planning staff or staff biologist at least 30 days prior to breaking ground on the residential subdivision portion of the Proposed Project. The compliance report shall detail the progress that has been made towards implementation of the vernal pool creation/enhancement mitigation measures implemented by the Proposed Project. Provided mitigation is well underway, the City may approve commencement of the development portion of the Proposed Project thereafter.

The above mitigation measure would reduce impacts to Burke's goldfields (special-status plants) to a level considered less than significant pursuant to CEQA.

14.1.1 IMPACT BIO-2. BURKE'S GOLDFIELDS SEED COLLECTION

The Proposed Project includes a proposal to create the Stonebridge Preserve where wetlands would be enhanced and created to inure to the benefit of Burke's goldfields, a state and federally-listed endangered vernal pool plant that occurs on the Santa Rosa Plain. The plan to create and enhance Burke's goldfields habitat will require the collection of this plant's seeds from a property or properties that support healthy donor colonies of Burke's goldfields for use in recolonizing enhanced and created seasonal wetlands within the Stonebridge Preserve.

Pursuant to the CEQA, harvesting Burke's goldfields seeds from a healthy donor site for use in the Stonebridge Preserve, if carefully executed, will not result in significant impacts to donor populations. The wetland enhancement and creation project in the Stonebridge Preserve is expected to increase seasonal wetland functions and values and will significantly increase numbers of endangered Burke's goldfields plants/colonies. The establishment of a new Burke's goldfield preserve will increase the Santa Rosa Plain population of Burke's goldfields which is in keeping with the USFWS' 2016 Recovery Plan for the Santa Rosa Plain (USFWS 2016), and with CDFW's objectives for promotion of endangered vernal pool plants on the Santa Rosa Plain.

None of the sparse occurrences of Burke's goldfields in the proposed Stonebridge Preserve will be impacted during enhancement of wetlands within the Stonebridge Preserve. That is, there will be no direct "take" of Burke's goldfields during the enhancement/recontouring of existing wetlands because the portions of the wetlands where these plants occur will be avoided by the enhancement project. Within the Stonebridge Preserve, wetlands that are not occupied by Burke's will be enhanced to provide conditions that promote the establishment of Burke's goldfield colonies. The proposed enhancement/recontouring of swales in the proposed Preserve will emulate the highly successful wetland recontouring that occurred in the CDFW-owned Woodbridge Preserve which has resulted in a flourishing Burke's goldfield population (refer to Attachment D for photographs of the Woodbridge Preserve Burke's goldfield population).

14.1.2 MITIGATION MEASURE BIO-2. BURKE'S GOLDFIELDS SEED COLLECTION

Per a Seed Collection Plan prepared by L. Stromberg (L. Stromberg 2018c) for the proposed Stonebridge Preserve, Burke's goldfield seeds will be collected from a number of possible source populations including the Alton Lane Mitigation Site and/or the Woodbridge Preserve, and other sites. This seed collection plan shall be implemented as part of the Proposed Project. CDFW owns the Woodbridge Preserve and will own the Alton Lane Mitigation Site in the near future. Since seeds are proposed to be collected in the spring of 2020, for use in the Stonebridge Preserve in 2020, the CDFW would have to permit the collection of Burke's goldfield seeds from one of these sites or other sites that CDFW may designate. The Applicant shall apply to CDFW for an Incidental Take Permit pursuant to Section 2081 of the California Fish and Game Code that allows the collection of Burke's goldfield seeds. This seed collection will allow for the

Stonebridge Preserve Burke's goldfields restoration project to be implemented and is a key component of this restoration project.

When implemented, the above mitigation measure would ensure that the Stonebridge Preserve enhancement project can be completed as proposed by the Applicant. This is a mitigation measure for a less than significant beneficial impact.

14.1.3 IMPACT BIO-3. DEVELOPMENT OF THE PROJECT WOULD HAVE A POTENTIALLY SIGNIFICANT ADVERSE IMPACT ON POTENTIAL CALIFORNIA TIGER SALAMANDER MIGRATION/DISPERSAL HABITAT (POTENTIALLY SIGNIFICANT)

The project site falls within the Sonoma County Distinct Population Segment (DPS) of the California tiger salamander. This DPS is federally listed as endangered and State-listed as threatened; as such, California tiger salamander is protected pursuant to FESA and CESA, respectively. The Proposed Project Site lies within USFWS designated Critical Habitat for this species. While USFWS does not require mitigation for impacts to Critical Habitat, nonetheless, USFWS must consider whether impacts to Critical Habitat would preclude recovery of the species prior to the time it can authorize Incidental Take for proposed projects (G. Monk pers. comm. with J. Hanni of the USFWS, October 2019).

The closest known record of breeding California tiger salamanders to the Proposed Project Site is at the Alton Lane Mitigation Site approximately 2,230 feet to the west of the Proposed Project Site (on the other side of Fulton Road from the Proposed Project). Based upon the USFWS' 2007 *Programmatic Biological Opinion* for the Santa Rosa Plain, that while not being used for the Proposed Project nonetheless sets precedent for USFWS' California tiger salamander mitigation requirements on the Santa Rosa Plain, requires a 1:1 mitigation ratio for a project that is greater than 2,200 feet but within 1.3 miles of a known California tiger salamander breeding site. ***Thus, in accordance with the USFWS' mitigation requirements for impacts to California tiger salamander dispersal/migration habitat, the Proposed Project would result in a potentially significant impact to California tiger salamander dispersal/migration habitat. This impact would be mitigated to a less than significant level pursuant to CEQA.***

14.1.4 MITIGATION MEASURE BIO-3. FOR IMPACTS TO POTENTIAL CALIFORNIA TIGER SALAMANDER MIGRATION/DISPERSAL HABITAT

The project would obtain Incidental Take authorization from the USFWS for impacts to potential California tiger salamander migration/dispersal habitat. The Proposed Project would require a Section 404 permit from the Corps for the discharge of fill or dredged material to waters of the U.S. The Corps would consult with USFWS under Section 7 of FESA. Under Section 7, USFWS will prepare a Biological Opinion (BO) that would provide FESA Incidental Take authorization for the Proposed Project. The BO will impose mitigation requirements for potential impacts to California tiger salamander migration/dispersal habitat and suitable rare plant habitat. These requirements will become conditions of the Corps' permit. The Applicant will implement applicable Corps' permit conditions including the conditions in the USFWS' BO.

The Project includes California tiger salamander mitigation based on the USFWS' *Programmatic Biological Opinion for the Santa Rosa Plain* (USFWS 2007). The mitigation for the Proposed Project's impact on California tiger salamander dispersal/ migration habitat would

be at a 1:1 ratio (i.e., 1 acre of preservation for each acre of development – or a prorata share thereof). The distance based 1:1 mitigation ratio set forth in the USFWS' Programmatic Biological Opinion was discussed in a July 12, 2018, pre-application meeting with the USFWS (Mr. Ryan Olah), M&A biologists, the Applicant (Mr. David Jacobson), and a mitigation banker (Mr. Harvey Rich). In this meeting it was confirmed that the proposed 14.00-acre Preserve would meet the 1:1 mitigation requirement for the project's impacts to California tiger salamander dispersal habitat on 14.00 acres of natural habitats on the Proposed Project Site (approximately 0.60-acre of the 14.60-acre development area is currently developed with buildings or hard-packed, gravel-impregnated roadways and parking areas around buildings (as shown in Figure 11). These developed surfaces do not constitute California tiger salamander habitat that warrants mitigation). The mitigation proposal meets with the objectives of the USFWS' *Recovery Plan for the Santa Rosa Plain* (USFWS 2016).

Thus, if the Protocol survey confirms that California tiger salamander are not found (discussed in Impact BIO-4, below), then mitigation for impacts to California tiger salamander would follow the USFWS' 1:1 mitigation requirement in accordance with the 2007 *Programmatic Biological Opinion* for the Santa Rosa Plain as described above. ***Implementation of this mitigation measure would fully mitigate impacts to California tiger salamander migration/dispersal habitat to a level regarded as less than significant pursuant to the CEQA.***

14.1.5 Impact BIO-4. Development of the Proposed Project Would Have a Potentially Significant Adverse Impact on Potential California Tiger Salamander Breeding and Over-Summering Habitat (Potentially Significant)

Based upon the multitude of California tiger salamander studies conducted over many years on properties immediately adjacent to or near the Proposed Project Site, all that had negative findings, and the absence of CNDDB records for California tiger salamanders east of Fulton Road and north of Santa Rosa Creek (CNDDB records 2019), M&A concludes that implementation of the project is unlikely to result in any impacts to the California tiger salamander, either to occupied habitat or to individual California tiger salamanders. That is, there is no expectation that the Proposed Project would result in "take" of the California tiger salamander. However, CDFW has requested that a full "Protocol" California tiger salamander study be completed pursuant to the "*Interim guidance on site assessment and field surveys for determining presence or a negative finding of the California tiger salamander*" (USFWS 2003). A Protocol California tiger salamander study includes an upland survey (aka "winter pitfall trapping study") and two spring larval breeding pool surveys to prove absence of the California tiger salamander on a project site.

One spring larval survey was completed in the spring of 2019 on the Proposed Project Site per the Protocol and was negative for California tiger salamander larvae. The winter pitfall trapping study is currently underway on the Proposed Project site and will not be completed until March 15, 2020. The second larval survey will be completed by May 15th, 2020. The completion of the Protocol California tiger salamander study will provide data that will either support or refute a conclusion that California tiger salamander are unlikely to occur on the project site. Until the Protocol California tiger salamander study is complete, and the California tiger salamander has been determined conclusively to be absent, ***impacts to the California tiger salamander are***

regarded as potentially significant pursuant to the CEQA. These impacts can be mitigated to a less than significant level pursuant to CEQA.

14.1.6 MITIGATION MEASURE BIO-4. FOR IMPACTS TO OCCUPIED CALIFORNIA TIGER SALAMANDER BREEDING AND OVER-SUMMERING HABITAT

While California tiger salamander are not expected to be found on the Proposed Project Site, should California tiger salamander be found during completion of the Protocol survey, which will not be completed until May 2020, then the Proposed Project Site *shall be regarded as occupied by the California tiger salamander*. If the Proposed Project Site is determined to be occupied by California tiger salamander then the Applicant would obtain a CESA 2081(b) Incidental Take Permit from the CDFW and the Biological Opinion prepared by the USFWS would also include conditions for the Proposed Project to ensure the recovery of the species. Any conditions in these permits/authorizations shall be implemented by the Applicant prior to grading the project site.

In addition, if the Proposed Project Site is determined to be occupied by California tiger salamander, consistent with the mitigation requirements imposed by CDFW and USFWS for impacts to occupied habitat, mitigation shall be implemented at a 3:1 replacement to impacts ratio. That is, three (3) acres of occupied California tiger salamander habitat shall be preserved in perpetuity for each acre of impact from the Proposed Project. The establishment of the Stonebridge Preserve shall be allowed to constitute a pro-rata acreage share of this California tiger salamander mitigation requirement. The remainder of the mitigation could be met by purchasing mitigation credits at an agency-approved mitigation bank.

In lieu of any land preservation, mitigation credits may be purchased by the Applicant to meet "occupied habitat" mitigation requirements, but any mitigation credits purchased to compensate for impacts to occupied California tiger salamander habitat must be approved by both USFWS and CDFW. After approved credits are purchased, proof of purchase shall be provided to the City of Santa Rosa, CDFW, and USFWS prior to the time that grading may commence on the Proposed Project Site. ***Implementation of this mitigation measure would fully mitigate impacts to occupied California tiger salamander habitat to a level regarded as less than significant pursuant to CEQA.***

14.1.7 IMPACT BIO-5. DEVELOPMENT OF THE PROJECT WOULD HAVE A POTENTIALLY SIGNIFICANT ADVERSE IMPACT ON NESTING BIRDS (POTENTIALLY SIGNIFICANT)

White-tailed kite, red-tailed hawk, and red-shouldered hawks are all known from the area and could nest on the Proposed Project Site or within a zone of influence of the Proposed Project Site. Common song birds (passerine birds) could also nest on or immediately adjacent to the Proposed Project Site. These bird species and many others known to nest in the Santa Rosa Plain are protected under the Migratory Bird Treaty Act (50 CFR 10.13). Also, their eggs and young are protected under California Fish and Game Code Sections 3503, 3503.5. Any project-related impacts to these species would be considered a significant adverse impact. Potential impacts to these species from the Proposed Project include disturbance to nesting birds and possibly death of adults and/or young. ***In the absence of survey results, impacts to nesting raptors and song***

birds from the Proposed Project would be potentially significant pursuant to CEQA. This impact could be mitigated to a level considered less than significant.

14.1.8 MITIGATION MEASURE BIO-5. NESTING BIRDS

To avoid impacts to nesting birds, a nesting bird survey shall be conducted within 15 days of commencing with construction work or tree removal if this work would commence between February 1st and August 31st. The nesting survey should include an examination of all buildings and all trees onsite and within 200 feet of the Proposed Project Site (i.e., within a zone of influence of the project site). The zone of influence includes those areas outside the Proposed Project Site where birds could be disturbed by earth- moving vibrations and/or other construction-related noise.

If birds are identified nesting on or within the zone of influence of the Proposed Project, prior to the commencement of construction that could impact the active nest(s), a qualified biologist shall establish a temporary protective nest buffer around the nest(s). The nest buffer should be staked with orange construction fencing. The buffer must be of sufficient size to protect the nesting site from construction-related disturbance and shall be established by a qualified ornithologist or biologist with extensive experience working with nesting birds near and on construction sites. Typically, adequate nesting buffers are 50 feet from the nest site or nest tree dripline for small birds and up to 300 feet for sensitive nesting birds and several raptor species known to nest in the region of the Proposed Project Site.

No construction or earth-moving activity shall occur within any established nest protection buffer prior to September 1 unless it is determined by a qualified ornithologist/biologist that the young have fledged (that is, left the nest) and have attained sufficient flight skills to avoid project construction zones, or that the nesting cycle is otherwise completed. In the region of the Proposed Project Site, most species complete nesting by mid-July. This date can be significantly earlier or later and would have to be determined by the qualified biologist. At the end of the nesting cycle, as determined by a qualified biologist, temporary nesting buffers may be removed and construction may commence in the established nesting buffers without further regard for the buffered nest site(s). ***Implementation of this mitigation measure would reduce impacts to nesting birds to a level regarded as less than significant pursuant to CEQA.***

14.1.9 IMPACT BIO-6. DEVELOPMENT OF THE PROPOSED PROJECT WOULD HAVE A SIGNIFICANT IMPACT ON WATERS OF THE UNITED STATES AND/OR STATE (SIGNIFICANT)

The Corps' approved Administrative Jurisdictional Determination letter (Attachment G) verified 6.31 acres of waters of the U.S. (specifically seasonal wetlands) on the Proposed Project Site. The proposed development project will permanently impact 2.52 acres of seasonal wetlands. In addition, 0.13-acre of seasonal wetlands would be permanently impacted within the Stonebridge Preserve as necessary to enhance the functions and services of wetlands in the Stonebridge Preserve (total = 2.65 acres of permanent fill). Specifically, wetland hydrology that currently pools against the adjacent development's retaining walls will be recontoured into a naturalistic vernal pool configuration and this will require filling 0.13-acre of the 3.79 acres of wetlands that currently occur in the proposed Stonebridge Preserve. Finally, 0.484-acre of existing seasonal

wetland in the Stonebridge Preserve that currently supports Burke's goldfields will be avoided/protected during the implementation of the wetland creation/enhancement project.

The Proposed Project would include the permanent loss of 2.65 acres of seasonal wetlands. ***These impacts are regarded as significant pursuant to the CEQA. The Project includes wetlands mitigation that would reduce impacts to waters of the U.S. to levels regarded as less than significant.***

14.1.10 MITIGATION MEASURE BIO-6. IMPACTS TO WATERS OF THE UNITED STATES /STATE

Given that there are no opportunities for meaningful avoidance or preservation within the development area of the Proposed Project Site, the Proposed Project will compensate for the loss of 2.65 acres of wetlands at a 2:1 mitigation ratio, or as otherwise required by the Corps and RWQCB to achieve "no net loss" of wetlands. Mitigation proposed is as follows:

To compensate for the loss of 2.65 acres of waters of the U.S. and State resulting from construction of the Proposed Project (2.52 acres) and the Stonebridge Preserve (0.13-acre), the Applicant proposes to construct, enhance, and avoid/preserve a total of 5.52 acres of wetlands in the Stonebridge Preserve. This will be accomplished by:

1. creating a total of 1.766 acres of new wetlands from uplands within the Preserve;
2. enhancing 3.267 acres of wetlands within the Preserve; and,
3. avoiding/preserving 0.484-acre of wetlands in the Preserve.

This enhancement, preservation, and creation is shown on Attachment A. Finally, to meet the Corps' "no net loss" policy, the Applicant will also purchase 0.89-acre of wetland mitigation credit from the Hazel Mitigation Bank or another Corps and RWQCB-approved wetland mitigation bank.

In total, after the enhancement and creation, the Stonebridge Preserve that currently supports 3.79 acres of wetlands will support 5.52 acres of enhanced wetlands. Enhancing 3.267 acres of wetlands exceeds a 1:1 impact to mitigation ratio. Thus, in consideration that the Proposed Project will not result in a net loss of waters of the United States/State (per paragraph above) and will enhance an additional 3.267 acres of existing wetlands (which exceeds 1:1 impacts to enhancement ratio), and create 1.766 acres, taken together the Proposed Project *will exceed* a 2:1 overall replacement/enhancement to impacts ratio.

When implemented, the above mitigation measure would reduce impacts to waters of the United States and State to a level considered less than significant.

14.1.11 IMPACT BIO-7. CUMULATIVE IMPACTS TO VEGETATION AND WILDLIFE RESOURCES (LESS THAN SIGNIFICANT)

Implementation of the Proposed Project would contribute to a cumulative loss of seasonal wetlands and non-native annual grassland. Implementation of the development project would also result in cumulative impacts to common plant and animal species. There are other Proposed Projects in Santa Rosa and Sonoma County that would/are impacting similar resources to those

that would be impacted by the Proposed Project. Project-related impacts would be considered cumulative with other projects in the region. ***The mitigation measures prescribed in the section above would offset cumulative impacts to special-status species, seasonal wetlands, and plant communities/wildlife habitats to a level regarded as less than significant.*** The mitigation proposed would also result in a net increase of Burke's goldfields colonies since wetland restoration and enhancement measures on the property would improve hydrologic function in seasonal wetlands specifically to promote colonization of these wetlands by Burke's goldfields.

Table 1

Plants Observed at the Stonebridge, 2220 Fulton Road Project Site

Gymnosperms

Cupressaceae

Hesperocyparis macrocarpa	Monterey cypress

Pinaceae

Pinus radiata	Monterey pine

Angiosperms - Dicots

Apiaceae

Daucus pusillus	Rattlesnake weed
Eryngium aristulatum var. aristulatum	California coyote-thistle
**Foeniculum vulgare*	Sweet fennel
Sanicula bipinnatifida	Purple sanicle
**Torilis nodosa*	Knotted hedge-parsley

Araliaceae

**Hedera helix*	English ivy

Asteraceae

Achyrachaena mollis	Blow-wives
Agoseris heterophylla var. heterophylla	False dandelion
Anaphalis margaritacea	Pearly everlasting
**Anthemis cotula*	Mayweed
Baccharis pilularis subsp. consanguinea	Coyote brush
**Carduus pycnocephalus subsp. pycnocephalus*	Italian thistle
**Cichorium intybus*	Chicory
**Cirsium vulgare*	Bull thistle
**Cotula coronopifolia*	Brass-buttons
Erigeron canadensis	Horseweed
**Helminthotheca echioides*	Bristly ox-tongue
**Hypochaeris glabra*	Smooth cat's-ear
**Hypochaeris radicata*	Rough cat's-ear
**Lactuca saligna*	Willow lettuce
**Lactuca serriola*	Prickly lettuce
Lasthenia burkei	Burke's goldfields
Lasthenia glaberrima	Smooth goldfields
**Leontodon saxatilis*	Long-beaked hawkbit
**Matricaria chamomilla*	German chamomile
**Pseudognaphalium luteoalbum*	Everlasting cudweed
**Senecio vulgaris*	Common groundsel
**Soliva sessilis*	Field burrweed
**Sonchus asper subsp. asper*	Prickly sow-thistle
**Sonchus oleraceus*	Common sow-thistle
**Taraxacum officinale*	Common dandelion
**Tragopogon porrifolius*	Common salsify
Xanthium strumarium	Cocklebur

* Indicates a non-native species

Table 1

Plants Observed at the Stonebridge, 2220 Fulton Road Project Site

Boraginaceae	
Plagiobothrys bracteatus	Bracted popcornflower
Plagiobothrys stipitatus var. stipitatus	Showy Great Valley popcornflower
Plagiobothrys undulatus	Wavy-stemmed popcornflower
Brassicaceae	
**Brassica nigra*	Black mustard
**Capsella bursa-pastoris*	Shepherd's purse
Cardamine oligosperma	Few-seed bittercress
**Hirschfeldia incana*	Short-podded mustard
Lepidium nitidum	Shining peppergrass
**Raphanus sativus*	Wild radish
Campanulaceae	
Downingia concolor var. concolor	Downingia
Downingia cuspidata	Toothed downingia
Caryophyllaceae	
**Cerastium glomeratum*	Mouse-ear chickweed
**Stellaria media*	Common chickweed
Convolvulaceae	
**Convolvulus arvensis*	Bindweed
Crassulaceae	
Crassula aquatica	Water pygmy-weed
Cucurbitaceae	
Marah fabacea	Wild cucumber
Euphorbiaceae	
Croton setiger	Turkey mullein
Fabaceae	
Acmispon brachycarpus	Short podded lotus
**Lotus corniculatus*	Birdfoot trefoil
Lupinus bicolor	Bicolored lupine
Lupinus nanus	Sky lupine
**Medicago polymorpha*	California burclover
Trifolium depauperatum	Dwarf sack clover
**Trifolium dubium*	Little hop clover
**Trifolium repens*	White clover
**Trifolium subterraneum*	Subterranean clover
Trifolium variegatum	White-tip clover
Trifolium willdenovii	Tomcat clover
**Vicia benghalensis*	Purple vetch
**Vicia cracca*	Bird vetch
**Vicia sativa*	Common vetch
Fagaceae	
Quercus agrifolia var. agrifolia	Coast live oak

* Indicates a non-native species

Table 1

Plants Observed at the Stonebridge, 2220 Fulton Road Project Site

Geraniaceae	
**Erodium botrys*	Broad-leaf filaree
**Erodium cicutarium*	Red-stem filaree
**Erodium moschatum*	White-stem filaree
**Geranium dissectum*	Cut-leaf geranium
Juglandaceae	
**Juglans regia*	English walnut
Lamiaceae	
**Mentha pulegium*	Pennyroyal
Limnanthaceae	
Limnanthes douglasii subsp. nivea	Douglas' meadowfoam
Lythraceae	
**Lythrum hyssopifolia*	Hyssop loosestrife
Malvaceae	
**Malva nicaeensis*	Bull mallow
Sidalcea calycosa subsp. calycosa	Annual checker mallow
Myrsinaceae	
**Lysimachia arvensis*	Scarlet pimpernel
Myrtaceae	
**Eucalyptus globulus*	Blue gum
Onagraceae	
Epilobium brachycarpum	Summer cottonweed
Taraxia ovata	Sun cup
Orobanchaceae	
**Parentucellia viscosa*	Yellow glandweed
Triphysaria versicolor subsp. faucibarbata	Yellow owl's-clover
Papaveraceae	
Eschscholzia californica	California poppy
Plantaginaceae	
Callitriche heterophylla var. heterophylla	Larger water-starwort
Callitriche marginata	Winged water-starwort
Gratiola ebracteata	Bractless hedge-hyssop
Plantago erecta	Plantain
**Plantago lanceolata*	English plantain
Veronica peregrina subsp. xalapensis	Purslane speedwell
Polygonaceae	
**Polygonum aviculare*	Common knotweed
**Rumex acetosella*	Sheep sorrel
**Rumex crispus*	Curly dock
**Rumex pulcher*	Fiddle dock

* Indicates a non-native species

Table 1

Plants Observed at the Stonebridge, 2220 Fulton Road Project Site

Ranunculaceae

Ranunculus californicus	California buttercup
Ranunculus lobbii	Lobb's aquatic buttercup
**Ranunculus muricatus*	Spiny-fruit buttercup
Ranunculus pusillus	Low buttercup

Rosaceae

**Prunus cerasifera*	Cherry plum
Prunus sp.	Prunus
**Rubus armeniacus*	Himalayan blackberry

Angiosperms -Monocots

Agavaceae

Chlorogalum pomeridianum var. pomeridianum	Soap plant

Cyperaceae

Cyperus eragrostis	Tall flatsedge
Eleocharis macrostachya	Creeping spikerush

Juncaceae

Juncus bufonius	Toad rush
**Juncus capitatus*	Dwarf rush
Juncus tenuis	Slender rush

Juncaginaceae

Triglochin scilloides	Flowering quillwort

Poaceae

**Aira caryophyllea*	Silver European hairgrass
**Anthoxanthum aristatum subsp. aristatum*	Annual vernal grass
**Avena barbata*	Slender wild oat
**Briza maxima*	Rattlesnake grass
**Briza minor*	Small quaking grass
Bromus carinatus var. carinatus	California brome
**Bromus diandrus*	Ripgut grass
**Bromus hordeaceus*	Soft chess
**Bromus madritensis subsp. madritensis*	Foxtail chess
**Cynodon dactylon*	Bermudagrass
**Cynosurus echinatus*	Dogtail Grass
Danthonia californica	California oatgrass
Deschampsia danthonioides	Annual hairgrass
**Elymus caput-medusae*	Medusahead
**Festuca bromoides*	Brome fescue
**Festuca myuros*	Rattail sixweeks grass
**Festuca perennis*	perennial ryegrass
Hordeum brachyantherum	Meadow barley
**Hordeum marinum subsp. gussoneanum*	Mediterranean barley
**Hordeum murinum subsp. leporinum*	Hare barley
**Phalaris aquatica*	Harding grass
Pleuropogon californicus var. californicus	Annual semaphore grass

* Indicates a non-native species

Table 1

Plants Observed at the Stonebridge, 2220 Fulton Road Project Site

**Poa annua*	Annual bluegrass
**Polypogon monspeliensis*	Annual beard grass
Themidaceae	
Brodiaea elegans subsp. elegans	Harvest brodiaea
Triteleia hyacinthina	White brodiaea

* Indicates a non-native species

Table 2
Wildlife Observed at the Stonebridge, 2220 Fulton Road Project Site

Amphibians	
Sierran treefrog	*Pseudacris sierra*
Reptiles	
California red-sided garter snake	*Thamnophis sirtalis infernalis*
Birds	
lesser yellow legs	*Tringa flavipes*
Snowy egret	*Egretta thula*
Mallard	*Anas platyrhynchos*
Mourning dove	*Zenaida macroura*
Anna's hummingbird	*Calypte anna*
Black phoebe	*Sayornis nigricans*
California scrub jay	*Aphelocoma californica*
American crow	*Corvus brachyrhynchos*
Northern mockingbird	*Mimus polyglottos*
European starling	*Sturnus vulgaris*
Cedar waxwing	*Bombycilla cedrorum*
California towhee	*Pipilo crissalis*
Mammals	
Botta's pocket gopher	*Thomomys bottae*
Raccoon	*Procyon lotor*

Table 3

Special-Status Plants Known to Occur Within Two Miles of the Stonebridge Project Site

Family Taxon Common Name	Status*	Flowering Period	Habitat	Area Locations	Probability on Project Site
Asteraceae					
Blennosperma bakeri Sonoma sunshine	Fed: FE State: CE CNPS: Rank 1B.1	February-April	Valley and foothill grassland (mesic); vernal pools.	Closest record for this species is a historic record on the project site (Occurrence No. 10, mapped by CNDDB as a polygon covering several properties).	None. Not observed onsite in 2015, 2016, 2017, or 2019 appropriately timed surveys. No impact to plant expected from development; the Preserve will provide habitat. See text.
Hemizonia congesta congesta White seaside tarplant	Fed: - State: - CNPS: Rank 1B.2	April-November	Valley and foothill grassland. 20 to 560 meters. Clay soils	Closest record for this species located approximately 0.6-mile south of the project site (Occurrence No. 23).	None. Was not observed during years of appropriately timed surveys. No impact expected.
Lasthenia burkei Burke's goldfields	Fed: FE State: CE CNPS: Rank 1B.1	April-June	Meadows and seeps (mesic); vernal pools.	Observed on the project site and also 0.6-mile south of the project site (Occurrence No. 19 and 23).	High. Was observed during appropriately timed surveys. Will be protected in a habitat Preserve. See text.
Campanulaceae					
Downingia pusilla Dwarf downingia	Fed: - State: - CNPS: Rank 2.2	March-May	Valley and foothill grassland (mesic); vernal pools.	Closest record for this species located approximately 0.4-mile west of the project site (Occurrence No. 80).	None. Was not observed during years of appropriately timed surveys. No impact expected.
Liliaceae					
Lilium pardalinum pitkinense Pitkin Marsh lily	Fed: FE State: CE CNPS: Rank 1B.1	June-July	Cismontane woodland (mesic); meadows and seeps; marshes and swamps (freshwater).	Closest record for this species located in the vicinity of the project site (Occurrence No. 1).	None. No suitable habitat onsite. It was not observed during years of appropriately timed surveys. No impact expected.

Table 3

Special-Status Plants Known to Occur Within Two Miles of the Stonebridge Project Site

Family Taxon Common Name	Status*	Flowering Period	Habitat	Area Locations	Probability on Project Site
Limnanthaceae					
Limnanthes vinculans Sebastopol meadowfoam	Fed: FE State: CE CNPS: Rank 1B.1	April-May	Meadows (mesic); vernal pools.	Closest record for this species located apprioximately 0.4 mile west of the project site (Occurrence No. 21).	None. Not observed onsite during years of appropriately timed surveys. No impact to plant expected from development. Regardless, the Preserve will provide habitat. See text.
Polemoniaceae					
Navarretia leucocephala bakeri Baker's navarretia	Fed: - State: - CNPS: Rank 1B.1	May-July	Cismontane woodland; lower montane coniferous forest; meadows (mesic); valley and foothill grassland; vernal pools.	Closest record for this species located approximately 0.6-mile south of the project site (Occurrence No. 20).	None. Was not observed during years of appropriately timed surveys. No impact expected.
Ranunculaceae					
Ranunculus lobbii Lobb's aquatic buttercup	Fed: - State: - CNPS: Rank 4	March-May	Cismontane woodland; north coast coniferous forest; valley and foothill grassland; vernal pools; [mesic].	Observed in the wetlands onsite.	High. Observed during surveys onsite. Will be protected in the onsite habitat Preserve.

Table 3

Special-Status Plants Known to Occur Within Two Miles of the Stonebridge Project Site

Family Taxon Common Name	Status*	Flowering Period	Habitat	Area Locations	Probability on Project Site

***Status**

Federal:
FE - Federal Endangered
FT - Federal Threatened
FPE - Federal Proposed Endangered
FPT - Federal Proposed Threatened
FC - Federal Candidate

State:
CE - California Endangered
CT - California Threatened
CR - California Rare
CC - California Candidate
CSC - California Species of Special Concern

CNPS:
Rank 1A - Presumed extinct in California
Rank 1B - Plants rare, threatened, or endangered in California and elsewhere
Rank 1B.1 - Seriously endangered in California (over 80% occurrences threatened/ high degree and immediacy of threat)
Rank 1B.2 - Fairly endangered in California (20-80% occurrences threatened)
Rank 1B.3 - Not very endangered in California (<20% of occurrences threatened or no current threats known)

CNPS Continued:
Rank 2 - Plants rare, threatened, or endangered in California, but more common elsewhere
Rank 2A - Extirpated in California, common elsewhere
Rank 2B.1 - Seriously endangered in California, but more common elsewhere
Rank 2B.2 - Fairly endangered in California, but more common elsewhere
Rank 2B.3 - Not very endangered in California, but more common elsewhere
Rank 3 - Plants about which we need more information (Review List)
Rank 3.1 - Plants about which we need more information (Review List) Seriously endangered in California
Rank 3.2 - Plants about which we need more information (Review List) Fairly endangered in California
Rank 4 - Plants of limited distribution - a watch list

Table 4

Special-Status Wildlife Known to Occur Within Two Miles of the Stonebridge, 2220 Fulton Road Project Site

Species	*Status	Habitat	Closest Locations	Probability on Project Site
Fish				
Coho salmon - Central California ESU *Oncorhynchus kisutch*	Fed: FE State: CE Other:	Federal listing = pops between Punta Gorda & San Lorenzo River. State listing = pops south of San Francisco Bay only. Requires beds of loose, silt-free, coarse gravel for spawning. Also needs cover, cool water and sufficient dissolved oxygen.	Closest record for this species located 3.0 miles north of the project site (Occurrence No. 25)	None. No stream, creeks, or other drainages onsite. No impacts expected.
Amphibians				
California tiger salamander (So Co DPS) *Ambystoma californiense*	Fed: FE State: CT Other:	Found in grassland habitats of the valleys and foothills. Requires burrows for aestivation and standing water until late spring (May) for larvae to metamorphose.	Closest record for this species located 0.42- mile west of the project site (Occurrence No. 360)	Low to None. No records for CTS east of Fulton Road. Extensive studies completed in area with negative findings. Protocol study onsite underway. See text.
Reptiles				
Western pond turtle ** *Emys marmorata*	Fed: - State: CSC Other:	Inhabits ponds, marshes, rivers, streams, and irrigation ditches with aquatic vegetation. Needs suitable basking sites and upland habitat for egg laying. Occurs in the Central Valley and Contra Costa County.	Closest record for this species located 0.1 -mile northwest of the project site (Occurrence No. 525)	None. No streams, drainages or other semi-permanent water sources onsite. Seasonal wetlands onsite dry too quickly to provide habitat. No impact expected.

Table 4

Special-Status Wildlife Known to Occur Within Two Miles of the Stonebridge, 2220 Fulton Road Project Site

Species	*Status	Habitat	Closest Locations	Probability on Project Site

***Status**

Federal:	State:
FE - Federal Endangered	CE - California Endangered
FT - Federal Threatened	CT - California Threatened
FPE - Federal Proposed Endangered	CR - California Rare
FPT - Federal Proposed Threatened	CC - California Candidate
FC - Federal Candidate	CSC - California Species of Special Concern
FPD - Federally Proposed for delisting	FP - Fully Protected
	WL - Watch List. Not protected pursuant to CEQA

**The USFWS hopes to finish a 12-month finding for western pond turtle in 2021 but until formally listed, it is not afforded the protections of FESA.

RESULTS OF MULTI-YEAR SURVEY FOR SPECIAL-STATUS PLANT SPECIES, WOODSIDE HOLDINGS PROPERTY (A. P. NO. 034-043-070) SANTA ROSA, CALIFORNIA

1.0. SUMMARY

This report presents the findings of a multi-year survey conducted for special-status plant species on the approximately 28.6-ac Woodside Holdings property (A.P. No. 034-043-070), located in northwest Santa Rosa (Figure 1) on the west side of Fulton Road between San Miguel Avenue and Tedeschi Drive (Figure 2) (all figures at the end of the report). The site is located within the Santa Rosa Plain and the area covered by the Santa Rosa Plain Conservation Strategy.

Several site visits were made in 2015, 2016, and 2017. Based on visits in each of these years to reference sites for the three plant species listed as endangered on the Santa Rosa Plain, the survey in each year was conducted within the "windows" during which the three target species either were in flower or were otherwise readily identifiable. The survey methods used were consistent with the guidelines established by the California Department of Fish and Wildlife and the U. S. Fish and Wildlife Service for assessing the effects of proposed developments on rare and endangered plants and plant communities.

Historic records indicate that both Sonoma sunshine and Burke's goldfields have been observed on the property in the past. The three years of survey produced observations of Burke's goldfields at several locations but Sonoma sunshine was not observed on the property in any year.

2.0. PROPERTY LOCATION AND CONDITIONS

2.1. PROJECT SITE LOCATION

The Woodside Holdings property is a 28.6-acre parcel (A. P. No. 034-043-070) located northwest of downtown Santa Rosa (Figure 1) (all figures at the end of the report) on the east side of Fulton Road between San Miguel Avenue and Tedeschi Drive (Figure 2). The site is located within the Santa Rosa Plain and the area covered by the Santa Rosa Plain Conservation Strategy.

2.2. HISTORIC AND CURRENT LAND USES

The Woodside Holdings property is a rural residential property occupied currently by tenants who have established a garden, use many of the outbuildings, and park their vehicles on hardscaped (gravel-surfaced) areas and in other areas that are regularly mowed around the residence and other structures. Twenty years ago, the property was used to graze cattle and horses and to produce hay. Currently, the eastern three-quarters of the property is mowed annually for fuel control. Fill in the southeast corner of the Woodside Holdings property suggest that structures may have once been present there. Apparently planted trees (two rows) visible on the 1942 aerial photograph available through on-line the Sonoma County Vegetation Mapping and Lidar Project and a scattered fruit trees indicate that an orchard may once have been planted in the northeast half of the Woodside Holdings property but has long been abandoned; all but eight trees had been removed prior to 1942.

2.3. TOPOGRAPHY AND DRAINAGE

The project site is relatively flat, except for where depressional wetland habitat is present. The elevation over most of the site ranges from approximately 138 ft in the depressional wetlands, including the natural drainages, to 142 ft on the top of mounds where they remain intact in the eastern two-thirds of the property. The total difference in elevation is approximately four feet.

The drainage patterns on the site are complex and have been modified slightly by development of adjacent lands. The property contains eight small watersheds (Figure 3) (Stromberg 2015) all but one of which are drained by a swale or swale network and all of which reflect the natural topography except the watershed in the southwest corner of the site where construction of a driveway, parking areas, a residence, gardens, and several outbuildings long ago changed the drainage pattern.

Most significantly, the flow of water from the site is blocked on both sides of the property. Before the Woodbridge subdivision was constructed, water flowed from a pair of watersheds toward a six-foot-deep ditch excavated at the headwaters of Abramson Creek that carried water to a culvert below Fulton Road. The largest, best defined swale on the site drains a large part of the site toward a drop inlet at the edge of the Montage subdivision, Another swale also carries water toward the Montage subdivision but, absent a drop inlet, water collects against a retaining wall. Small swales drain Watersheds 5 and 7 to the south and water from Watershed 8 flows toward Fulton Road as sheet flow.

2.4. SOILS

The soils on the site are mapped by the Natural Resource Conservation Service (NRCS) (U. S. Soil Conservation Service 1978) as belonging to three phases of the Huichica loam series and to the ponded phase of the Clear Lake clay soil series. Huichica loam soils are mapped as being present over more than 60 percent of the site with Clear Lake clays restricted to the northcentral and northeastern part. The mapping is inaccurate; Clear Lake clays are present in less than an acre of the site and variants of the Huichica loam series occur over all but this small area.

Generally, Huichica loam soils are characterized by a water-restricting horizon in the form of a moderately well cemented hardpan with the capacity to perch water at the surface. In the native, undrained state, the Huichica loam series in depressional sites is a hydric soil.

Both the Huichica and the Clear Lake clay soils are considered a vernal pool soils by the Vernal Pool Task Force (CH2M Hill 1996). Applying the criteria developed by the National Technical Committee for Hydric Soils to the soils in Sonoma County, the NRCS field office in Santa Rosa (Soil Conservation Service 1992) developed a draft list of hydric soils that occur in Sonoma County. The ponded phase of the Huichica series and the Clear Lake clay series are classified as hydric soils. Although the actual presence of hydric soils must be determined in the field during the course of the delineation, experience indicates that the soils in the depressional landforms in terrain, i.e., the soils in the swales and in the lower ground surrounding the mima mounds, are generally considered to be hydric soils.

2.5. EXISTING HABITAT

The habitat on the Woodside Holdings property includes upland annual grasslands and seasonal wetlands. Trees have been planted along the east property line and around the residence and the area around the residential is mowed A complete list of plant species observed on the project site is presented in Appendix B. The general aspect of the vegetation is shown in Figure 3.

2.5.1. Seasonal Wetlands

The wetlands on the Woodside Holdings property (Figure 4) are palustrine emergent wetlands (Cowardin et al 1979). According to the California Rapid Assessment Method (CRAM) (California Wetlands Monitoring Workgroup 2013), the wetlands on the Woodside Holdings property would be considered a vernal pool system. No CRAM assessment has been conducted.

The area of the seasonal wetland on the site is approximately 6.31 acres. The wetlands are a mosaic of vernal pools connected by swales. The maximum depth of standing water in the vernal pools ranges from six inches to more than 18 inches.

In the bottoms of vernal pools and the deeply inundated swales (characterized by local high points that cause water to collect upgradient), dominant and common species include California semaphore grass (*Pleuropogon californicus*), meadow barley (*Hordeum brachyantherum*), and curly dock (*Rumex crispus*), smooth goldfields (*Lasthenia glaberrima*), pennyroyal (*Mentha pulegium*), and coyote thistle (*Eryngium aristulatum*). The vegetation at the margins is typically indicative of the

transition into upland habitat. Dominant and common plant species at the margins include perennial ryegrass (*Festuca perennis*), Mediterranean barley (*Hordeum marinum gussoneanum*), bristly oxtongue (*Heminthotheca echioides*), prickly lettuce (*Lactuca serriola*), and sheep sorrel (*Rumex acetosella*).

Upland plant species that occur at the wetland margins include Harding grass (*Phalaris aquatica*), pea (*Lathyrus cicera*), medusahead (*Taeniatherum caput-medusae*), common vetch (*Vicia sativa*), rough cat's ear (*Hypocheris radicata*), hedge bindweed (*Convolvulus arvensis*), soft chess (*Bromus hordeaceus*), and cutleaf geranium (*Geranium dissectum*).

2.5.2. Upland Annual Grassland

The upland annual grassland is dominated by non-native annual and perennial introduced and naturalized species. The dominant and more common species include slender oats (*Avena barbata*), hare barley (*Hordeum murinum*), subterranean clover (*Trifolium subterraneum*), vernal grass (*Anthoxanthum aristatum*), perennial ryegrass *(Festuca perennis*), six-weeks fescue (*Vulpia bromoides*), soft chess (*Bromus hordeaceus*), lesser trefoil (*Trifolium dubium*), several species of vetch (*Vicia sativa, V. cracca, V. villosa varia*), sheep sorrel (*Rumex acetosella*), and cut-leaf geranium (*Geranium dissectum*). Less common species include ripgut brome (*Bromus diandrus*), hedge bindweed *(Convolvulus arvensis)*, bristly ox-tongue (*Helminthotheca echioides*), prickly lettuce (*Lactuca serriola*), several species of filaree (*Erodium cicutarium, E. botrys, E. moschatum*), rough and smooth cat's ear (*Hypochaeris radicata* and *H. glabra*), California poppy (*Eschscholzia californica*), sun cups (*Camissonia ovata*), toad rush (*Juncus bufonius*), capitate rush (*Juncus capitatus*), bird'sfoot trefoil (*Lotus corniculatus*), wooly trefoil (*Lotus humistratus*), medusahead grass (*Taeniatherum caput-medusae*), willow herb (*Epilobium brachycarpum*), mouse-ear chickweed (*Cerastium glomeratum*), and miniature lupine (*Lupinus bicolor*).

2.5.3. Woody Vegetation

Walnut trees (*Juglans* spp.), fruit trees (*Prunus* spp.), a single coast live oak (*Quercus agrifolia*) or coast live oak-interior live oak hybrid, a pine (*Pinu*s sp.), a Monterrey cypress (*Hesperocyparis macrocarpa*), and ornamental shrubs have been planted around the residence and associated outbuildings in the western part of the site. A string of eucalyptus trees (*Eucalyptus globulus*) has also been planted just inside the eastern property line. A handful of coyote brush (*Baccharis pilularis* var. *consanguine*a) shrubs and eight small ornamental fruit trees (*Prunus* spp.) are also scattered across the eastern third of the site, apparent holdovers of an orchard, the remnants of which (two rows) visible on the 1942 aerial photograph available through on-line the Sonoma County Vegetation Mapping and Lidar Project (all but eight trees had been removed prior to 1942).

3.0. METHODS

Target special-status species were those listed in the draft Santa Rosa Plain Vernal Pool Ecosystem Preservation Plan in preparation for the Santa Rosa Plain Vernal Pool Task Force (CH2M Hill 1996) and identified in California Natural Diversity Data Base records. Target species include those species whose range includes the region and which, by virtue of their known occurrence in the vicinity, were considered to have the potential to occur on the site given their habitat requirements and the types of habitat present. These species are listed in the table in Appendix A.

The dates of the field visits were:

1. April 21 and 29, May 8, and July 21, 2015;

2. April 4, 14, and 27, May 6 and 19, 2016;

3. May 9 and 23, 2017.

Each wetland was surveyed completely each year. Non-wetland habitat was considered to provide suitable habitat for the upland target species were surveyed using a series of wandering transects. The survey was conducted within the "windows" during which all target species (those whose range and habitat affinities include the site, those observed in previous years on the site or on adjacent properties) either were in flower or would be readily identifiable to species. The surveys followed U. S. Fish and Wildlife Service's (Service) (2005)[1] survey guidelines for the Santa Rosa Plain, the guidelines published by the California Department of Fish and Wildlife (CDFW)[2] for assessing the impacts of development on rare and endangered plant communities (2000), and the inventory guidelines published by the California Native Plant Society (2001).[3]

Distributional information for the three species listed as endangered by the federal government -- Sonoma sunshine (*Blennosperma bakeri*), Sebastopol meadowfoam (*Limnanthes vinculans*), and Burke's goldfields (*Lasthenia burkei)* -- was obtained from Appendix B to the Vernal Pool Ecosystem Preservation Plan (CH2M Hill 1996). Information on distributional and habitat requirements of the upland species was obtained from flora (Mason 1975, Munz and Keck 1968, Best et al. 1996, Baldwin et al. 2012), other reports and surveys conducted for special-status species on the Santa Rosa Plain and properties in the vicinity, and the California Native Plant Society's list of rare and endangered plant species in the state (Skinner and Pavlik 1994). Target species are

shown in Appendix A.

Nearby reference sites were checked prior to *and on the first survey date* in each of the three years. The reference sites included:

1. For Sebastopol meadowfoam – Carinalli-Todd Road Mitigation Bank, Gobbi Mitigation Site, Slippery Rock Conservation Bank, Hazel Mitigation Bank;

2. For Sonoma sunshine – Alton Lane Mitigation Site, Alton North Conservation Bank, Slippery Rock Conservation Bank, Carinalli-Todd Road Mitigation Bank;

3. For Burke's goldfields – Alton Lane Mitigation Site, Alton North Conservation Bank, the nearby Woodbridge Mitigation Site, Slippery Rock Conservation Bank, Hall Road Unity of the Santa Rosa Ecological Reserve (constructed wetlands in the southwest corner).

4.0. SURVEY RESULTS

4.1. SONOMA SUNSHINE

Figure 5 shows that Sonoma sunshine had been observed in the eastern quarter of the site. The figure shows both extant and current occurrences. Sonoma sunshine was not observed on the project site in the current protocol surveys.

All plant species observed during the conduct of the survey are listed in Appendix B.

4.2. BURKE'S GOLDFIELDS

Burke's goldfields also occurred historically on the Woodside Holdings property. The orange polygon in Figure 5 shows the limits of a broadly defined occurrence of Burke's goldfields that includes the north eastern third of the Woodside Holdings property, the Woodbridge Preserve (WP), the Leras property to the east of the Woodbridge Preserve, and the Kerry Ranch site to the east of the Woodside Holdings property. Several million Burke's goldfields have been observed during monitoring of the WP and the species persists in a small but declining colony on the Kerry Ranch site, but no Burke's goldfields has been observed on the Leras property by Stromberg in 2016.

Burke's goldfields was present in one colony on the SP in 2014 and four colonies in 2017 (Figure 6). Based on full counts, the annual maximum number of plants observed in the four colonies is estimated at 3,305 plants. Colony 1, observed in years prior to the three-year protocol surveys is situated along the eastern property line at the margin between a deep pool and an adjacent mound. The population at this location has fluctuated; over the three-year period the total number of plants has ranged from an estimated 720 plants to more than 1,500 plants.

Since 2015, Burke's goldfields has been observed at the three other locations along the northern SP boundary, the colonies developing from seed carried onto the SP from vernal pools on the WP. The number of plants and the extent of the colonies have continued to climb since the first plants were observed in Colony 2 in 2015, when 55 Burke's goldfields were observed in a 20-foot-long strip on the west side of the vernal pool and just inside the fence. In 2016, Colony 2 spread within the pool and by the spring of 2017, Colonies 3 and 4 had become established.

4.3. LOBB'S AQUATIC BUTTERCUP

Other special-status plant species that occur in the region include those listed in the Santa Rosa Plain Vernal Pool Ecosystem Preservation Plan (CH2M Hill 1996) and which, by virtue of their known nearby occurrence, habitat affinities, and the habitats present, could be considered to have the potential to occur on the Woodside Holdings property. These species include Bogg's Lake dodder (*Cuscuta howelliana*), a parasitic species on many vernal pool species, particularly *Eryngium*, Sebastopol meadowfoam (*Limnanthes vinculans*); small-flowered mesamint (*Pogogyne douglasii* ssp. *parviflora*); Lobb's aquatic buttercup; and many-flowered navarretia (*Navarretia pleiantha*).

Suitable habitat is present on the Woodside Holdings property for all of these special-status species but only Lobb's aquatic buttercup has been observed. The locations at which the species has been observed, including areas west of the Woodside Holdings property, are shown in Figure 6. Because

of the species' floating habitat, no attempt was made to count the number of plants at any of the locations where it has been observed.

APPENDICES

APPENDIX A.
Species with the Potential to Occur on the Woodside Holdings Property
Santa Rosa, California

Scientific Name **Common Name**	**Status**	**Habitat Affinities**	**Blooming Period**	**Notes**
Alopecurus aequalis var. *sonomensis* Sonoma alopecurus	USFWS: C2 CDFG: - CNPS: 1A	Marshes, swamps, and scrub.	Feb-Apr	No suitable habitat occurs on the Woodside Holdings property. Species was not observed.
Amsinkia lunaris Bent-flowered fiddleneck	USFWS: - CDFG: - CNPS: 4	Annual grassland.	Mar-Jun	The upland habitat might provide marginally suitable habitat but the species was not observed
Blennosperma bakeri Sonoma sunshine	USFWS: E CDFG: E CNPS: 1b	Vernal pools and vernal swales.	Mar-Apr	Suitable habitat is present on the Woodside Holdings property. The species was not observed. CNDDB historic records.
Cuscuta howelliana Bogg's Lake dodder	USFWS: - CDFG: - CNPS: 4	Vernal pools.	Mar-Apr	Suitable habitat is present on the Woodside Holdings property. The species was not observed.
Downingia humilis Dwarf downingia	USFWS: - CDFG: - CNPS: 1B	Vernal pools.	Mar-Apr	Suitable habitat is present on the Woodside Holdings property. The species was not observed.
Lasthenia burkei Burke's goldfields	USFWS: E CDFG: E CNPS: 1b	Vernal pools and vernal swales.	Mar-Apr	Suitable habitat is present on the Woodside Holdings property. Four colonies were observed.
Limnanthes vinculans Sebastopol meadowfoam	USFWS: E CDFG: E CNPS: 1b	Vernal pools and vernal swales.	Mar-Apr	Suitable habitat is present on the Woodside Holdings property but site is near the northern range limit. Species not observed.
Navarretia pleiantha Many-flowered navarretia	USFWS: C1 CDFG: CNPS: 1b	Vernal pools and vernal swales.	Mar-Apr	Suitable habitat is present on the Woodside Holdings property site but the species was not observed.
Perideridia gairdneri ssp. *gairdneri* Gairdner's yampah	USFWS: C2 CDFG: - CNPS: 1B	Vernal pools and saturated season-al wetlands.	Jun-Jul	Suitable clay soils are present in a small area of the site but the species was not observed.
Pogogyne douglasii ssp. *parviflora* Small-flowered mesamint	USFWS: C3c CDFG: - CNPS: 1B	Vernal pools and inundated sea-sonal wetlands	May-Jul	Suitable habitat is present on the Woodside Holdings property. The species was not observed.
Ranunculus lobbii Lobb's aquatic buttercup	USFWS: - CDFG: - CNPS: 4	Vernal pools and ponded swales.	Feb-Apr	Suitable habitat is present on the Woodside Holdings property. The species was not observed.
Trifolium amoenum Showy indian clover	USFWS: C2* CDFG: - CNPS: 1A	Annual grassland.	Apr-Jun	The upland habitat on the site provides marginally suitable habitat but the species was not observed.

Notes: **Agencies** - USFWS = U.S. Fish and Wildlife Service, CDFG = California Department of Fish and Game, CNPS = California Native Plant Society. **Federal Designations** – E = Listed as Endangered by the Federal Government. T = Listed as Threatened by the Federal Government. C1 = Category 1 Candidate. C1* = Sufficient data are on file to support listing but taxon presumed extinct. C2 = Category 2 Candidate. C2* = Sufficient data to support federal listing lacking, taxon presumed extinct. **State Designations** – E = Listed as Endangered. R = Listed as Rare. **CNPS Designations** – List 1A = Species presumed extinct in California. List 1B = Species rare and endangered in California and elsewhere. List 2 = Species rare and endangered in California but more common elsewhere. List 3 = Species about which additional data are needed. List 4 = Species of limited distribution.

APPENDIX B.
Species Observed on the Woodside Holdings Property,
Santa Rosa, California

CLASS **Family** ***Scientific name***	**Common name**
GYMNOSPERMS	
Cupressaceae	
Hseperocyparis macrocarpa	
Pinaceae	
Pinus radiata	Monterey pine
ANGIOSPERMS **DICOTYLEDONAE**	
Apiaceae	
Eryngium aristulatum	coyote thistle
Foeniculum vulgare	fennel
Sanicula bipinnatifida	footsteps of spring
Torilis nodosa	knotted hedge parsley
Araliaceae	
Hedera helix	English ivy
Asteraceae	
Achyrachaena mollis	blow-wives
Agoseris heterophylfa	false dandelion
Anaphalis margaritacea	pearly everlasting
Anthemis cotula	mayweed
Baccharis pilularis var. *consanguinea*	coyote brush
Carduus pycnocephalus	Italian thistle
Chamomilla suaveolens	pineapple weed
Cichorium intybus	chicory
Cirsium vulgare	bull thistle
Conyza canadensis	horseweed
Cotula coronopifolia	brass buttons
Gnaphalium luteo-album	cudweed
Helminthotheca echioides	bristly ox-tongue
Hypochaeris glabra	Smooth cat's-ear
Hypochaeris radicata	rough cat's-ear

Lactuca saligna	Willow lettuce
Lactuca serriola	prickly lettuce
Lasthenia burkei	Burke’s goldfields
Leontodon taraxacoides	hawkbit
Senecio vulgaris	common groundsel
Soliva sessilis	soliva
Sonchus asper asper	prickly sow thistle
Sonchus oleraceus	common sow thistle
Taraxacum officinale	dandelion
Tragopogon porrifolius	salsify
Xanthium strumarium	cocklebur

Boraginaceae

Plagiobothrys stipitatus stipitatus	slender popcorn flower
Plagiobothrys bracteatus	popcorn flower

Brassicaceae

Brassica nigra	black mustard
Capsella bursa-pastoris	shepherd's purse
Cardamine oligosperma	bitter cress
Hirschfeldia incana	short-podded mustard
Lepidium nitidum nitidum	peppeweed
Raphanus sativus	wild radish

Callitrichaceae

Callitriche heterophylla	water starwort

Campanulaceae

Downingia concolor	downingia

Caryophyllaceae

Cerastium glomeratum	mouse-ear chickweed
Spergularia sp.	sand spurrey
Stellaria media	common chickweed

Convolvulaceae

Convolvulus arvensis	hedge bindweed

Crassulaceae

Crassula aquatica	pygmy water-wort

Cucurbitaceae

Marah fabaceus	manroot

Euphorbiaceae	
Eremocarpus setigerus	turkey mullein
Fabaceae	
Acmispon brachycarpum	wooly trefoil
Lotus corniculatus	birdsfoot trefoil
Lupinus bicolor	miniature lupine
Lupinus nanus	sky lupine
Medicago polymorpha	bur clover
Trifolium depauperatum	dwarf sack clover
Trifolium dubium	little hop clover (lesser trefoil)
Trifolium repens	white clover
Trifolium subterraneum	subterranean clover
Trifolium variegatum	white-tip clover
Trifolium willdenovii	tomcat clover
Vicia benghalensis	purple vetch
Vicia cracca	cow vetch
Vicia sativa	common vetch
Fagaceae	
Quercus agrifolia	coast live oak
Geraniaceae	
Erodium botrys	broad-leaf filaree
Erodium cicutarium	red-stem filaree
Erodium moschatum	white-stem filaree
Geranium dissectum	cut-leaf geranium
Juglandaceae	
Juglans regia	English walnut
Lamiaceae	
Mentha pulegium	pennyroyal
Lythraceae	
Lythrum hyssopifolium	hedge hyssop
Malvaceae	
Malva nicaeensis	bull mallow
Sidalcea calycosa	checker mallow
Myrtaceae	
Eucalyptus globulus	blue gum (eucalyptus)

Onagraceae	
Camissonia ovata	sun cups
Epilobium angustifolium	fireweed
Epilobium brachycarpum	tall willowherb
Orobanchaceae	
Parentucellia viscosa	parentucellia
Triphysaria versicolor faucibarbata	yellow owl's clover
Papaveraceae	
Eschscholzia californica	California poppy
Plantaginaceae	
Plantago erecta	plantain
Plantago lanceolata	English plantain
Veronica peregrina xalapensis	speedwell
Polygonaceae	
Polygonum arenastrum	knotweed
Rumex acetosella	sheep sorrel
Rumex crispus	curly dock
Rumex pulcher	fiddle dock
Primulaceae	
Anagallis arvensis	scarlet pimpernel
Ranunculaceae	
Ranunculus californicus	California buttercup
Ranunculus muricatus	spiny-fruited buttercup
Rosaceae	
Prunus cerasifera	cherry plum
Prunus sp.	ornamental fruit tree
Rubus discolor	Himalya berry
Scrophulariaceae	
Parentucellia viscosa	parentucellia
MONOCOTYLEDONAE	
Cyperaceae	
Cyperus eragrostis	tall flatsedge
Eleocharis macrostachya	spike rush

Juncaceae	
Juncus bufonius	toad rush
Juncus capitatus	capitate rush
Juncus tenuis	slender rush
Liliaceae	
Brodiaea elegans	harvest brodiaea
Chlorogalum pomeridianum	soap plant
Triteleia hyacinthina	hyacinth brodiaea
Poaceae	
Aira caryophyllea	silver European hairgrass
Anthoxanthum aristatum	vernal grass
Avena barbata	slender oats
Briza maxima	rattlesnake grass
Briza minor	little rattlesnake grass
Bromus carinatus	California bromegrass
Bromus diandrus	ripgut brome
Bromus hordeaceus	soft chess
Cynodon dactylon	Bermuda grass
Cynosurus echinatus	dogtail grass
Danthonia californica	California oatgrass
Deschampsia danthonioides	annual hairgrass
Festuca bromoides	brome fescue
Festuca myuros	six-weeks descur
Festuca perennis	ryegrass
Hordeum brachyantherum	meadow barley
Hordeum marinum var. *gussoneanum*	Mediterranean barley
Hordeum murinum var. *leporinum*	hare barley
Phalaris aquatica	Harding grass
Pleuropogon californicus	California semaphore grass
Poa annua	annual bluegrass
Polypogon monspeliensis	rabbitsfoot grass
Taeniatherum caput-medusae	medusahead

Attachment D. Photographs of the Stonebridge Project Site
Burke's Goldfields within the Project Site and the Adjacent Woodbridge Preserve

Looking southeast at existing seasonal wetlands on the Stonebridge development site. Marginal habitat for Burke's goldfields and other special-status plants.

Scattered, sparse occurrence of Burke's goldfields in dense vegetation along northern boundary of Project Site Preserve on May 7, 2019. Compare with the Burke's on the Woodbridge Preserve which is immediately to the north of the project site and shown in the photos below.

Woodbridge Preserve on May 7, 2019. *Lasthenia burkei* (yellow) and *Limnanthes douglasii* (white).

Woodbridge Preserve on May 21, 2019. *Lasthenia burkei* and *Limnanthes douglasii*.

Bill,

The Service concurs with the conclusions of the July 23, 2008 Report on California Tiger Salamander Surveys Conducted at Four West Santa Rosa Properties, Sonoma County, California. As a result, the proposed project will not result in 'take' and no mitigation for the Sonoma County Distinct Population Segment of California tiger salamander (Ambystoma californiense) is required, however compensation will be required for the endangered Burke's goldfields, Sonoma sunshine, Sebastopol meadowfoam and/or Many-flowered navarretia for the proposed medium density residential project on these parcels. The Service should be contacted to obtain concurrence on the acreage of compensation required prior to any ground disturbance for the proposed project.

No critical habitat has been proposed or designated for these species in the Santa Rosa Plain, therefore none will be affected. Our determinations are confined to this project site, are consistent with the Interim Santa Rosa Plain Conservation Strategy and made under the authority of the Endangered Species Act of 1973.

Subject: California tiger salamander studies near the Stonebridge Development Project, 2220 Fulton Road, Santa Rosa, CA, 94201

Dear Mr. Hellmann:

At your request, I am writing this letter to describe and summarize the findings of surveys and studies of Sonoma DPS California tiger salamander (CTS) I have conducted in the vicinity of the proposed Stonebridge Project at 2200 Fulton Road (project site), and to provide my opinion of the probability of finding CTS on your project site. The surveys and studies are indicated in the attached image and include the following:

- Harvest Christian project site, 2568 Piner Road (Fawcett 2005): A CTS Site Assessment for the parcel was conducted in 2004 (Fawcett 2005). Wetlands on the parcel were considered too shallow for CTS breeding. However, in February and March 2005, dip net surveys for CTS larvae were conducted in wetlands on adjacent City-owned property (2590 Piner Road) in February and March 2005, with negative findings.

- Shook and Waller project site, 2323 and 2285 San Miguel Avenue (Fawcett 2007): Pitfall trapping was conducted at this uplands site in 2005-2006 and 2006-2007, with negative results.

- Schellinger Brothers Fulton Road project site (Fawcett 2008): From spring 2004 through spring 2008 protocol-level pitfall trapping and dip net surveys were conducted at four parcels located between San Miguel Avenue and Onsrud Lane (APNs 034-043-066, 2082 Fulton Road; 034-043-060, 2038 Fulton Road; 034-043-064, 2022 Fulton Road; and 034-043-039), 2420 San Miguel Avenue). Potentially suitable pools for CTS breeding at the 2022 and 2038 Fulton Road properties (Figure 2) were dip-netted once in 2004 and multiple times in 2005, 2006, and 2007, with negative results. Pitfall trapping was conducted in two consecutive years at each of the parcels, with negative results for CTS. A letter of concurrence from the U.S. Fish and Wildlife Service (USFWS) that the project would not result in take of CTS is attached at the end of this letter.

- Alton North Conservation Bank (ANCB): My team conducted CTS egg and larvae surveys every breeding season since pools were created in summer 2010 (Fawcett 2011 through 2019 annual reports). Three adult or juvenile CTS were rescued and relocated during construction, and breeding occurred in spring 2011 in several pools close to known breeding pools at the Alton Lane Mitigation Site (ALMS). The ALMS CTS breeding population was established from an unauthorized introduction of larvae circa 1989-90. Since 2011, breeding has occurred in ANCB pools hydrologically connected to pools at the ALMS, progressively breeding in pools westward across the larger (22.67 acre) portion of ANCB. This westward movement between pools that are in relatively close proximity demonstrates that terrestrial-phase adults or juveniles that grew into adult CTS moved into and bred within the ANCB, representing a small western expansion of the ALMS CTS population. This is the only known evidence of any range expansion of the ALMS population.

- Fulton Road Conservation Site (FRCS; Fawcett 2015, 2016, 2019): This approximately 26-acre preserve located at 2365 Fulton Road consists of two sections, named the Fulton Road Conservation Site and the Fulton Road Mitigation Site (see attached image). Potentially suitable pools and swales for CTS breeding were present at FRCS (mainly in the western half) before construction in 2017 of new pools and swales, many of which are also potentially suitable for breeding. Dip net surveys for CTS larvae were conducted by LSA, Inc. in existing pools in 2006, 2007, and 2008., and egg and larvae surveys were conducted by my team in 2014 – 2015 and in 2016, all with negative results for CTS. Following construction of new pools in 2017, we conducted a larvae survey in 2018, and multiple egg and larvae surveys in 2019, again with negative results.

Discussion

The geographic range of CTS, as defined by USFWS, includes the project site, although to date, no CTS eggs, larvae, or terrestrial juveniles or adults have been found anywhere east of Fulton Road (the location of the project site) or north of Santa Rosa Creek. The only known breeding population north of Santa Rosa Creek occurs on the west side of Fulton Road focused around the ALMS including at the immediately adjacent ANCB. The Alton Lane population was originally established by an unauthorized introduction of CTS larvae circa 1989-90 from likely from what is now known as the Wright Conservation Property. In addition, there was a subsequent authorized introduction in 2004 of juveniles and adults taken from a construction site in Cotati west of Highway 101. Because of legal precedent (Alsea Decision), USFWS treats the Alton Lane CTS population the same as all others in Sonoma County. Pursuant to the USFWS' 2007 Programmatic Biological Opinion by and between the U.S. Army Corps of Engineers and the USFWS, and the USFWS' 2016 Santa Rosa Plain Recovery Plan, USFWS requires mitigation for impacts to CTS individuals

and/or their habitat. CDFW, pursuant to the CESA can only require CTS mitigation when a proposed project would impact ("take") CTS since the CESA doesn't regulate impacts to "habitat."

In answer to the second part of your request regarding the probability of finding CTS at the Stonebridge site, I will point out that the Alton Lane CTS population appears to be expanding its range only to immediately adjacent pools within the ANCB. No expansion has been documented outside the Alton Lane mitigation complex. No CTS were detected in the surveys described above, nor in numerous other surveys of which I am aware in the Fulton Road area closer to the Stonebridge project site (Stacy Martinelli, CDFW, personal communication May 2019). and in areas further east and north (Geoff Monk, personal communication 06/11/19). In my view, it is extremely unlikely that CTS currently occupy uplands or breed in wetlands at the Stonebridge site.

DEPARTMENT OF THE ARMY
SAN FRANCISCO DISTRICT, U.S. ARMY CORPS OF ENGINEERS
1455 MARKET STREET, 16TH FLOOR
SAN FRANCISCO, CALIFORNIA 94103-1398

MAR - 9 2016

Regulatory Division

Subject: File Number 2015-00443N

Laurence P. Stromberg, Ph.D.
59 Jewell Street
San Rafael, California 94901

Dear Dr. Stromberg:

This correspondence is in reference to your submittal of November 16, 2015, on behalf of David Jacobson, Harvey Rich, and Ted Winfield requesting an approved jurisdictional determination of the extent of wetlands on a 28.6 acre parcel located at 2220 Fulton Road in Santa Rosa, Sonoma County, California. Coordinates for the project are 38°28.322'N, -122°46.478'W and APN 034-043-070. The wetlands drain to Abramson Creek.

All proposed discharges of dredged or fill material occurring below the plane of ordinary high water in non-tidal waters of the United States; or below the high tide line in tidal waters of the United States; and within the lateral extent of wetlands adjacent to these waters, typically require Department of the Army authorization and the issuance of a permit under Section 404 of the Clean Water Act of 1972, as amended (33 U.S.C. § 1344 *et seq.*). Waters of the United States generally include the territorial seas; all traditional navigable waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including waters subject to the ebb and flow of the tide; wetlands adjacent to traditional navigable waters; non-navigable tributaries of traditional navigable waters that are relatively permanent, where the tributaries typically flow year-round or have continuous flow at least seasonally; and wetlands directly abutting such tributaries. Where a case-specific analysis determines the existence of a "significant nexus" effect with a traditional navigable water, waters of the United States may also include non-navigable tributaries that are not relatively permanent; wetlands adjacent to non-navigable tributaries that are not relatively permanent; wetlands adjacent to but not directly abutting a relatively permanent non-navigable tributary; and certain ephemeral streams in the arid West.

All proposed structures and work, including excavation, dredging, and discharges of dredged or fill material, occurring below the plane of mean high water in tidal waters of the United States; in former diked baylands currently below mean high water; outside the limits of mean high water but affecting the navigable capacity of tidal waters; or below the plane of ordinary high water in non-tidal waters designated as navigable waters of the United States, typically require Department of the Army authorization and the issuance of a permit under Section 10 of the Rivers and Harbors Act of 1899, as amended (33 U.S.C. § 403 *et seq.*). Navigable waters of the United States generally include all waters subject to the ebb and flow of

the tide; and/or all waters presently used, or have been used in the past, or may be susceptible for future use to transport interstate or foreign commerce.

The enclosed delineation map entitled, "Woodside Holdings Property" consisting of one sheet, certified March 4, 2016, prepared by Cinquini & Passarino, Inc. dated October 16, 2015 accurately depicts the extent and location of 6.31 acres of wetlands within the boundary area of the site that are subject to U.S. Army Corps of Engineers' regulatory authority under Section 404 of the Clean Water Act. This approved jurisdictional determination is based on the current conditions of the site, as verified during a field investigation of January 25, 2016, and a review of other data included in your submittal. This approved jurisdictional determination will expire in three years from the date of this letter, unless new information or a change in field conditions warrants a revision to the delineation map prior to the expiration date. The basis for this approved jurisdictional determination is explained in the enclosed *Approved Jurisdictional Determination Form*. This approved jurisdictional determination is presumed to be consistent with the official interagency guidance of June 5, 2007, interpreting the Supreme Court decision, *Rapanos v. United States*, 126 S. Ct. 2208 (2006).

You are advised that the approved jurisdictional determination may be appealed through the U.S. Army Corps of Engineers' *Administrative Appeal Process*, as described in 33 C.F.R. Part 331 (65 Fed. Reg. 16,486; Mar. 28, 2000), and outlined in the enclosed flowchart and *Notification of Administrative Appeal Options, Process, and Request for Appeal* (NAO-RFA) Form. If you do not intend to accept the approved jurisdictional determination, you may elect to provide new information to this office for reconsideration of this decision. If you do not provide new information to this office, you may elect to submit a completed NAO-RFA Form to the Division Engineer to initiate the appeal process; the completed NAO-RFA Form must be submitted directly to the Appeal Review Officer at the address specified on the NAO-RFA Form. You will relinquish all rights to a review or an appeal, unless this office or the Division Engineer receives new information or a completed NAO-RFA Form within 60 days of the date on the NAO-RFA Form. If you intend to accept the approved jurisdictional determination, you do not need to take any further action associated with the Administrative Appeal Process.

You are further advised that the U.S. Army Corps of Engineers evaluated the approved jurisdictional determination pursuant to the provisions of Section 404 of the Clean Water Act. Accordingly, the approved jurisdictional determination may not be valid under the wetland conservation provisions of the Food Security Act of 1985, as amended (16 U.S.C. §§ 3801-3862 *et seq.*). If you or your tenant is a current or prospective USDA program participant, you should request a certified wetland determination from the local office of the Natural Resources Conservation Service prior to the commencement of work.

You may refer any questions on this matter to Roberta Morganstern of my Regulatory staff by telephone at 415-503-6782 or by e-mail at Roberta.A.Morganstern@usace.army.mil. All

correspondence should be addressed to the Regulatory Division, North Branch referencing the file number at the head of this letter.

The San Francisco District is committed to improving service to our customers. My Regulatory staff seeks to achieve the goals of the Regulatory Program in an efficient and cooperative manner, while preserving and protecting our nation's aquatic resources. Hi David and Harvey:

This e-mail is to confirm our discussions of Thursday, July 12 in which we discussed establishing a preserve on the eastern portion of the Jacobson Property to provide Burke's goldfields mitigation and California tiger salamander mitigation for the development of the western portion of the property into a residential subdivision. This compensation approach would be beneficial to Burke's goldfields and CTS since it will create a larger protected preserved area for these species. The Service approves of this approach to developing the site and looks forward to receiving the documentation. Thank you.

Re: Completed *Tree Preservation and Mitigation Report*, 2220 Fulton Road, Santa Rosa, California

David,

Attached you will find our completed *Tree Preservation and Mitigation Report* for the above noted project site in Santa Rosa. A total of 32 trees were evaluated and this includes all trees in the vicinity of proposed grading and construction. Some off-site trees were also included where they overhang the project site and could be impacted by the construction project.

Each tree on the project is identified in the field with a numbered aluminum tag placed on the trunk at approximately eye level. Off-site trees were not tagged because they were on private property, and the attached Tree Location Plan identifies their location as reference.

All trees in this report was evaluated and documented for species, size, health, and structural condition. The *Tree Inventory Chart* also includes information about expected impacts of the proposed development plan and recommendations for action based on the plan reviewed. The *Tree Location Plan* shows the location and numbering sequence of all evaluated trees. *Tree Preservation Guidelines* are also included for general reference.

This report is intended to be a basic inventory of trees present at this site, which includes a general review of tree health and structural condition. No in-depth evaluation has occurred on any tree, and assessment has included only external visual examination without probing, drilling, coring, root collar examination, root excavation, or dissecting any tree part. Failures, deficiencies, and problems may occur in these trees in the future, and this inventory in no way guarantees or provides a warranty for their condition. Trees that are located off site should be evaluated by their owners if they have concerns about health or stability.

EXISTING SITE CONDITION SUMMARY

The project property consists of a large grass covered field with a single homesite that will be demolished. A second homesite is present in one corner of the site that is not part of this project. There are existing subdivision developments on the sides of the property.

EXISTING TREE SUMMARY

Trees on-site and overhanging include the following:

- Native species at or adjacent to the site include Valley Oak.
- Native species planted as ornamentals include Coast Redwood.
- Non-native species included Weeping Willow, Flowering Pear Black Walnut, Silver Maple, Plum, Apple, Deodar Cedar, Honey Locust, Red Gum Eucalyptus, and Italian Stone Pine

CONSTRUCTION IMPACT SUMMARY

A total of 10 trees will need to be removed for the project to be constructed. Off-site, overhanging trees appear to be preservable. Off-site Eucalyptus near the southeast corner of the site are in poor condition and should be removed before any construction begins.

Please feel free to contact me if you have questions regarding this report, or if further discussion would be helpful.

KEY TO TREE INVENTORY CHART

KEY TO TREE INVENTORY CHART

2220 Fulton Road
Santa Rosa, California

Tree Number

Each tree has been identified in the field with an aluminum tag and reference number. Tags are attached to the trunk at approximately eye level and the *Tree Location Plan* illustrates the location of each numbered tree.

Species

Each tree has been identified by genus, species and common name. Many species have more than one common name.

Trunk

Each trunk has been measured, to the nearest one-half inch, to document its diameter at 4 feet above adjacent grade. Trunk diameter is a good indicator of age, and is commonly used to determine mitigation replacement requirements.

Height

Height is estimated in feet, using visual assessment.

Radius

Radius is estimated in feet, using visual assessment. Since many canopies are asymmetrical, it is not uncommon for a radius estimate to be an average of the canopy size.

Health

The following descriptions are used to rate the health of a tree. Trees with a rating of 4 or 5 are very good candidates for preservation and will tolerate more construction impacts than trees in poorer condition. Trees with a rating of 3 may or may not be good candidates for preservation, depending on the species and expected construction impacts. Trees with a rating of 1 or 2 are generally poor candidates for preservation.

(5) Excellent - health and vigor are exceptional, no pest, disease, or distress symptoms.

(4) Good - health and vigor are average, no significant or specific distress symptoms, no significant pest or disease.

(3) Fair - health and vigor are somewhat compromised, distress is visible, pest or disease may be present and affecting health, problems are generally correctable.

(2) Marginal - health and vigor are significantly compromised, distress is highly visible and present to the degree that survivability is in question.

(1) Poor - decline has progressed beyond the point of being able to return to a healthy condition again. Long-term survival is not expected. This designation includes dead trees.

Structure

The following descriptions are used to rate the structural integrity of a tree. Trees with a rating of 3 or 4 are generally stable, sound trees which do not require significant pruning, although cleaning, thinning, or raising the canopy might be desirable. Trees with a rating of 2 are generally poor candidates for preservation unless they are preserved well away from improvements or active use areas. Significant time and effort would be required to reconstruct the canopy and improve structural integrity. Trees with a rating of 1 are hazardous and should be removed.

(4) Good structure - minor structural problems may be present which do not require corrective action.

(3) Moderate structure - normal, typical structural issues which can be corrected with pruning.

(2) Marginal structure - serious structural problems are present which may or may not be correctable with pruning, cabling, bracing, etc.

(1) Poor structure - hazardous structural condition which cannot be effectively corrected with pruning or other measures, may require removal depending on location and the presence of targets.

Expected Impacts

Considering the proximity of construction activities, type of activities, tree species, and tree condition - the following ratings are used to estimate the amount of impact on tree health and stability. Most trees will tolerate a (1) rating, many trees could tolerate a (2) rating with careful consideration and mitigation, but trees with a (3) rating are poor candidates for preservation due to their very close proximity to construction or because they are located within the footprint of construction and cannot be preserved.

(3) A significant impact on long term tree integrity can be expected as a result of proposed development.

(2) A moderate impact on long term tree integrity can be expected as a result of proposed development.

(1) A very minor or no impact on long term tree integrity can be expected as a result of proposed development.

(0) No impact is expected

Recommendations

Recommendations are provided for removal or preservation. For those being preserved, protection measures and mitigation procedures to offset impacts and improve tree health are provided.

(1) Preservation appears to be possible.

(2) Removal is required due to significant development impacts.

(3) Removal is recommended due to poor health or hazardous structure.

(4) Removal is required due to significant development impacts and poor existing condition.

(5) Removal is recommended due to poor species characteristics.

(6) Install temporary protective fencing at the edge of the dripline, or edge of approved construction, prior to beginning grading or construction. Maintain fencing in place for duration of all construction activity in the area.

(7) Maintain existing grade within the fenced portion of the dripline. Route drainage swales and all underground work outside the dripline.

(8) Place a 4" layer of chipped bark mulch over the soil surface within the fenced dripline prior to installing temporary fencing. Maintain this layer of mulch throughout construction.

(9) Prune to clean, raise, or provide necessary clearance. Prune to reduce branches that are over-loaded, over-extended, largely horizontal, arching, or have foliage concentrated near the branch ends, per International Society of Arboriculture Pruning Standards.

Pruning to occur by, or under the supervision of, an Arborist certified by the International Society of Arboriculture. Pruning Standards are attached to this report.

(10) This is a tree that is located off the project site, or very near the property line, with a canopy that overhangs the project site. This tree may be owned by others and ownership should be verified.

(11) This tree is exempt from mitigation replacement, per the Santa Rosa Tree Ordinance.

TREE PROTECTION GUIDELINES

GENERAL TREE PROTECTION GUIDELINES
FOR CONSTRUCTION AROUND PRESERVED TREES

2220 Fulton Road
Santa Rosa, CA

INTRODUCTION

Great care must be exercised when development is proposed in the vicinity of established trees of any type. The trees present at construction sites require specialized protection techniques during all construction activities to minimize negative impact on their long term health and vigor. The area immediately beneath and around canopy driplines is especially critical, and the requirements and procedures that follow are established to protect short and long term tree integrity. The purpose of this protection guideline is therefore to define the procedures that must be followed during any and all phases of development in the immediate vicinity of designated and protected trees.

Established, mature trees respond in a number of different ways to the disruption of their natural conditions. Change of grade within the root system area or near the root collar, damage to the bark of the trunk, soil compaction above the root system, root system reduction or damage, or alteration of summer soil moisture levels may individually or collectively cause physiological stress leading to tree decline and death. The individual impacts of these activities may cause trees to immediately exhibit symptoms and begin to decline, but more commonly the decline process takes many years, with symptoms appearing slowly and over a period of time. Trees may not begin to show obvious signs of decline from the negative impacts of construction until many years after construction is completed. It is not appropriate to wait for symptoms to appear, as this may be too late to correct the conditions at fault and to halt decline.

It is therefore critical to the long-term health of all protected trees that a defined protection program be established before beginning any construction activity where protected trees are found. Once incorporated at the design level, it is mandatory that developers, contractors, and construction personnel understand the critical importance of these guidelines, and the potential penalties that will be levied if they are not fully incorporated at every stage of development.

The following guidelines are meant to be utilized by project managers and those supervising any construction in the vicinity of protected trees including grading contractors, underground contractors, all equipment operators, construction personnel, and landscape contractors. These protection guidelines are presented in a brief outline form to be applied to each individual activity that occurs during

Horticultural Associates
P.O. Box 1261
Glen Ellen, CA 95442
707-935-3911

development activities. It is left to project managers to implement these protection measures. Questions which arise, or interpretation of guidelines as they apply to specific site activities, must be referred to the designated project arborist as they occur.

TREE PROTECTION ZONE

1. The canopy dripline is illustrated on the Improvement Plans and represents the area around each tree, or group of trees, which must be protected at all times with tree protection fencing. No encroachment into the dripline is allowed at any time without approval from the project arborist, and unauthorized entry may be subject to civil action and penalties.

2. The dripline will be designated by the project arborist at a location determined to be adequate to ensure long term tree viability and health.

TREE PROTECTION FENCING

1. Prior to initiating any construction activity on a construction project, including demolition or grading, temporary protective fencing shall be installed at each site tree. Fencing shall be located at the dripline designated by the project arborist or illustrated on the Improvement Plans.

2. Fencing shall be minimum 4' height at all locations, and shall form a continuous barrier without entry points around all individual trees, or groups of trees. Barrier type fencing such as *Tensar* plastic fencing is recommended, but any fencing system that adequately prevents entry will be considered for approval by the project arborist. The use of post and cable fencing is not acceptable.

3. Fencing shall be installed in a professional manner with steel fence posts (standard quality farm 'T' posts work well) placed no more than 8 feet on center. Fencing shall be attached to each post at 5 locations with plastic electrical ties, metal tie wire, or flip tie. See fencing detail.

4. Fencing shall serve as a barrier to prevent encroachment of any type by construction activities, equipment, materials storage, or personnel.

5. All encroachment into the fenced dripline must be approved in writing and supervised by the project arborist. Approved dripline encroachment may require additional mitigation or protection measures that will be determined by the project arborist at the time of the request.

6. Contractors and subcontractors shall direct all equipment and personnel to remain outside the fenced area at all times until project is complete, and shall instruct personnel and sub-contractors as to the purpose and importance of fencing and preservation.

7. Fencing shall be upright and functional at all times from start to completion of project. Fencing shall remain in place and not be moved or removed until all construction activities at the site are completed.

TREE PRUNING AND TREATMENTS

1. All recommendations for pruning or other treatments must be completed prior to acceptance of the project. It is strongly recommended that pruning be completed prior to the start of grading to facilitate optimum logistics and access.
2.
3. All pruning shall be conducted in conformance with International Society of Arboriculture pruning standards, and all pruning must occur by, or under the direct supervision of, an arborist certified by the International Society of Arboriculture.

GRADING AND TRENCHING

1. Any construction activity that necessitates soil excavation in the vicinity of preserved trees shall be avoided where possible, or be appropriately mitigated under the guidance of the project arborist. All contractors must be aware at all times that specific protection measures are defined, and non conformance may generate stop-work orders.

2. The designated dripline is defined around all site trees to be preserved. Fences protect the designated areas. No grading or trenching is to occur within this defined area unless so designated by the Improvement Plan, and where designated shall occur under the direct supervision of the project arborist.

3. Trenching should be routed around the dripline whenever possible. Where trenching has been designated within the dripline, utilization of underground technology to bore, tunnel or excavate with high-pressure air or water will be specified. Hand digging will be generally discouraged unless site conditions restrict the use of alternate technology.

4. All roots greater than one inch in diameter shall be cleanly hand-cut as they are encountered in any trench or in any grading activity. The tearing of roots

by equipment of any type shall not be allowed. Mitigation treatment of pruned roots shall be specified by the project arborist as determined by the degree of root pruning, location of root pruning, and potential exposure to desiccation. No pruning paints or sealants shall be used on cut roots.

5. Where significant roots are encountered mitigation measures such as supplemental irrigation and/or organic mulches may be specified by the project arborist to offset the reduction of root system capacity.

6. Retaining walls are effective at holding grade changes outside the area of the dripline and are recommended where necessary. Retaining walls shall be constructed in post and beam or drilled pier construction styles where they are necessary near or within a dripline.

7. Placement of fill soils is generally discouraged within the dripline, but in some approved locations may be approved to cover up to 30% of this area. The species and condition of the tree shall be considered, as well as site and soil conditions, and depth of fill. Retaining walls should be utilized to minimize the area of fill within the dripline. Type of fill soil and placement methods shall be specified by the project arborist.

8. Grade changes outside the dripline, or those necessary in conjunction with retaining walls, shall be designed so that drainage water of any type or source is not diverted toward or around the root crown in any manner. Grade shall drain away from root crown at a minimum of 2%. If grading toward the root collar is unavoidable, appropriate surface and/or subsurface drain facilities shall be installed so that water is effectively diverted away from root collar area.

9. Approved fill soils within the dripline may also be mitigated using aerated gravel layers and/or perforated aeration tubing systems, as specified by the project arborist.

10. Tree roots will be expected to grow into areas of soil fill, and quality of imported soil shall be considered. Ideally, fill soil should be site soil that closely matches that present within the root zone area. When import soil is utilized it must be the same or slightly coarser texture than existing site soil, should have a pH range comparable to site soils, and generally should have acceptable chemical properties for appropriate plant growth. A soil analysis is recommended prior to importation to evaluate import soil for these criteria.

11. Grade reduction within the designated dripline shall be generally discouraged, and where approved, shall be conducted only after careful consideration and coordination with the project arborist.

12. Foundations of all types within the dripline shall be constructed using design techniques that eliminate the need for trenching into natural grade. These techniques might include drilled piers, grade beams, bridges, or cantilevered structures. Building footprints should generally be outside the dripline whenever possible.

DRAINAGE

The location and density of native trees on many sites may be directly associated with the presence of naturally occurring water, especially ephemeral waterways. Project design, especially drainage components, should take into consideration that these trees may begin a slow decline if this naturally present association with water is eliminated.

TREE DAMAGE

Any form of tree damage which occurs during the demolition, grading, or construction process shall be evaluated by the project arborist. Specific mitigation measures will be developed to compensate for or correct the damage. Fines and penalties may also be levied.

Measures may include, but are not limited to, the following:

- pruning to remove damaged limbs or wood
- bark scoring to remove damaged bark and promote callous formation
- alleviation of compaction by lightly scarifying the soil surface
- installation of a specific mulching material
- supplemental irrigation during the growing season for up to 5 years
- treatment with specific amendments intended to promote health, vigor, or root growth
- vertical mulching or soil fracturing to promote root growth

- periodic post-construction monitoring at the developer's expense

- tree replacement, or payment of the established appraised value, if the damage is so severe that long term survival is not expected

FERTILIZATION

1. Native trees generally do not require supplemental fertilization unless exhibiting a deficiency symptom. Following completion of construction any tree that exhibits symptoms of a specific nutrient deficiency shall be fertilized to compensate for the deficiency. Soil or tissue analysis may be required to identify the deficiency.

2. Distressed trees, or trees damaged by construction in any way, may be detrimentally affected by supplemental fertilization. The decision to fertilize, and with what fertilizers, shall be made by the project arborist based on conditions and appearance observed at the completion of the project.

PEST CONTROL

A close visual examination for tree pests shall be conducted by the pruning contractor as he completes recommended pruning procedures. If a serious infestation is present, that was not apparent from ground observation, then pest control measures may be considered. However, the simple presence of tree pests does not warrant the use of chemical pesticides. Only a serious infestation, capable of causing tree decline, would warrant pesticide use. The use of organic sprays or pesticidal soaps is the preferred method for treating any serious pest infestation.

WEED CONTROL

No specific measures are recommended for weed control, and the presence of weeds should not be considered problematic in relation to continued tree health. However, use of contact weed killers and pre-emergent weed killers are generally not recommended due to their potential for root system damage if improperly applied.

DISEASE CONTROL

No specific measures are recommended for disease control unless noted in the Tree Protection and Preservation Plan. All disease control measures should be based on observation of actual conditions in the tree canopy.

MULCHING

Trees will generally benefit from the application of a 4 inch layer of chipped bark mulch over the soil surface within the greater root zone area. Ideal mulch material is a chipped bark containing a wide range of particle sizes. Bark mulches composed of shredded redwood, bark screened for uniformity of size, or chipped lumber will not function as beneficially. Rock and gravel mulches are generally discouraged due to their minimal benefit.

PLANTING UNDER EXISTING TREES

1. The installation of lawn beneath established native trees is strongly discouraged because it has the potential to initiate serious disease. If planting is required for aesthetic or functional purposes, the use of drought tolerant, woody species is most appropriate. Species should be selected for their ability to survive with minimal or no water through the summer months after the initial establishment period. Only drip irrigation should be utilized within the canopy dripline to minimize summer water in the root zone.

2. Many non-native trees will tolerate summer irrigation well and suitable landscape planting and irrigation may actually be beneficial.

ABSTRACT

Tom Origer & Associates conducted an archaeological resources study of the property at 2220 Fulton Road, Santa Rosa, California as part of the environmental review for development of a portion the property into a residential subdivision and the remainder of the property into wetland open space. The study, requested by Geoff Monk of Geoff Monk & Associates, complies with Section 106 of the National Historic Preservation Act, as required by the US Army Corps of Engineers and the California Environmental Quality Act. The purpose of this study was to identify resources that could be eligible for inclusion in the National Register of Historic Places, as outlined in 36 CFR 800 and to identify potential historical resources other than Tribal Cultural Resources, as defined in Public Resources Code [PRC] 21074 (a)(1)(A)-(B) and discussed in the Regulatory Context section). Tribal Cultural Resources are defined in Public Resources Code [PRC] 21074 (a)(1)(A)-(B).

The proposed project includes the development of 14.6 acres of the parcel into a residential subdivision with associated infrastructure. The remaining 14 acres would be converted into a wetland preserve.

This study included archival research at the Northwest Information Center, Sonoma State University, examination of the library and files of Tom Origer & Associates, Native American contact, and field inspection of the area of potential effects. The buildings on the property have the potential to be eligible for inclusion on the California Register of Historical Resources and the National Register of Historic Places.

Synopsis

Project:	2220 Fulton Road
Location:	2220 Fulton Road, Santa Rosa, Sonoma County
APN:	034-030-070
Quadrangles:	Sebastopol 7.5' series
Study Type:	Intensive
Scope:	28.49 acres
Field Hours:	6 person hours
NWIC #:	18-1609
TOA #:	2019-017
Finds:	No historic properties found (archaeology)

Key Personnel

Eileen Barrow was the project manager for this project. She participated in the fieldwork and wrote the report for this project. Mrs. Barrow has been with Tom Origer & Associates since 2005. She holds a Master of Arts in cultural resources management from Sonoma State University. Mrs. Barrow's experience includes work that has been completed in compliance with local ordinances, CEQA, NEPA, and Section 106 (NHPA) requirements. Her professional affiliations include the Society for American Archaeology, the Society for California Archaeology, the Cotati Historical Society, the Sonoma County Historical Society, and the Western Obsidian Focus Group.

Julia Karnowski conducted the records search for this project at the Northwest Information Center and participated in the fieldwork the report for this project. Ms. Karnowski holds a Bachelor of Science in Anthropology from California State Polytechnic University, Pomona, with graduate studies at Sonoma State University. She is affiliated with the Society for California Archaeology, the Society for American Archaeology, and the Society for Historical Archaeology.

INTRODUCTION

This report describes an archaeological resources study of the property at 2220 Fulton Road in central Sonoma County, 3.75 miles northwest of the Santa Rosa City Hall (Figure 1). The project encompasses a 28.49-acre parcel (APN 034-030-070) at 2220 Fulton Road and includes development of the western half of the parcel into a residential subdivision with associated infrastructure, and the conversion of the eastern half of the parcel into a wetland preserve. Geoff Monk of Geoff Monk & Associates requested the study. The US Army Corps of Engineers will review this project for compliance with Section 106 of the National Historic Preservation Act (Section 106) and the City of Santa Rosa will review this project for compliance with the California Environmental Quality Act (CEQA). Documentation pertaining to this study is on file at Tom Origer & Associates (File No. 2019-017).

REGULATORY CONTEXT

Under Section 106, when a federal agency is involved in an undertaking, it must take into account the effects of the undertaking on historic properties (36CFR Part 800). Compliance with Section 106 requires that agencies make an effort to identify historic properties that might be affected by a project.

The State of California requires that cultural resources be considered during the environmental review process. This process is outlined in CEQA and accomplished by an inventory of resources within a study area and by assessing the potential that historical resources could be affected by development. The term "Historical Resources" encompasses all forms of cultural resources including prehistoric and historical archaeological sites and built environment resources (e.g., buildings, bridges, canals), that would be eligible for inclusion on the California Register of Historical Resources (California Register). An additional category of resources is defined in CEQA under the term "Tribal Cultural

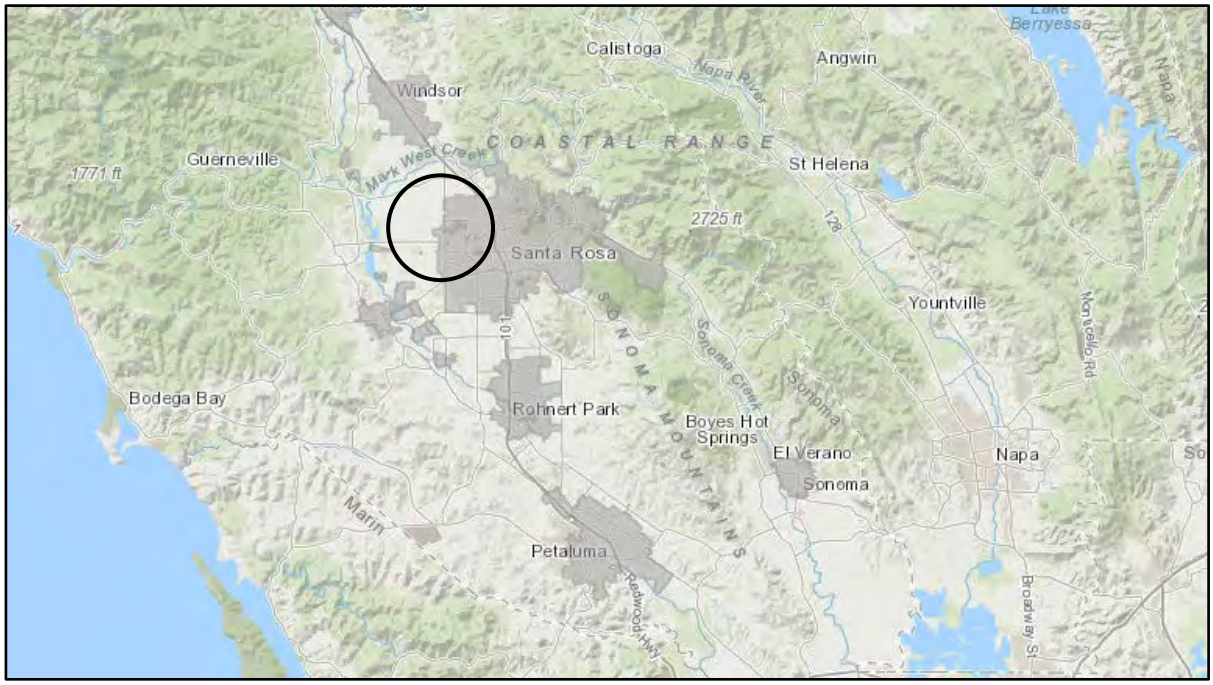

Figure 1. Project vicinity (adapted from Sonoma County Zoning and Land Use Map 2018).

Resources" (Public Resources Code Section 21074). They are not addressed in this report because Tribal Cultural Resources are resources that are of specific concern to California Native American tribes, and knowledge of such resources is limited to tribal people. Pursuant to CEQA, as revised in July 2015, such resources are to be identified by tribal people in direct, confidential consultation with the lead agency (PRC §21080.3.1).

The term, cultural resources, will be used in this report to describe historical resources under CEQA and cultural resources under Section 106.

Pursuant to Section 106 and the CEQA Guidelines, the goals of this study were to: 1) identify cultural resources within the project's area of potential effects (APE); 2) provide an evaluation of the significance of identified resources; 3) determine resource vulnerability to adverse impacts that could arise from project activities; and 4) offer recommendations designed to protect cultural resource values, as warranted.

Resource Definitions

The National Register defines a historic property as a district, site, building, structure, or object significant in American history, architecture, engineering, archaeology, and culture, and that may be of value to the nation as a whole or important only to the community in which it is located. The National Park Service (NPS) describes these resources as follows (NPS 1995:4-5).

> **Site.** A site is the location of a significant event, a prehistoric or historic occupation or activity, or a building or structure, whether standing, ruined, or vanished, where the location itself possesses historic, cultural, or archaeological value regardless of the value of any existing structure.
>
> **Building.** A building, such as a house, barn, church, hotel, or similar construction, is created principally to shelter any form of human activity. "Building" may also be used to refer to a historically and functionally related unit, such as a courthouse and jail, or a house and barn.
>
> **Structure.** The term "structure" is used to distinguish from buildings those functional constructions made usually for purposes other than creating human shelter.
>
> **Object.** The term "object" is used to distinguish from buildings and structures those constructions that are primarily artistic in nature or are relatively small in scale and simply constructed. Although it may be, by nature or design, movable, an object is associated with a specific setting or environment.
>
> **District.** A district possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development.

Significance Criteria

When a project might affect a cultural resource, the project proponent is required to conduct an assessment to determine whether the effect may be one that is significant. Consequently, it is necessary to determine the importance of resources that could be affected. For purposes of the

National Register, the importance of a resource is evaluated in terms of criteria put forth in 36CFR60 (see below). Eligibility criteria for the California Register of Historical Resources (CRHR) (Title 14 CCR, §4852) are very similar and will not be presented here.

> The quality of significance is present in properties that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:
>
> A. That are associated with events that have made a significant contribution to the broad patterns of our history; or
>
> B. That are associated with the lives of persons significant in our past; or
>
> C. That embody the distinct characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
>
> D. That have yielded or may be likely to yield, information important in prehistory or history.

In addition to meeting one or more of the above criteria, eligibility for both the CRHR and the National Register requires that a resource retains sufficient integrity to convey a sense of its significance or importance. Seven elements are considered key in considering a property's integrity: location, design, setting, materials, workmanship, feeling, and association.

The OHP advocates that all resources over 45 years old be recorded for inclusion in the OHP filing system (OHP 1995:2), although the use of professional judgment is urged in determining whether a resource warrants documentation.

PROJECT SETTING

The project lies on the Santa Rosa Plain, a northwest trending valley of the southern Coast Ranges. Twenty-two miles long and nine miles wide at its widest point, the Santa Rosa Plain was once a mosaic of oak savannah and vernal pools, cross-cut by seasonal streams that drained toward the area now known as the Laguna de Santa Rosa. Santa Rosa Creek and Mark West Creek, year-round tributaries to the laguna, are the main westerly flowing streams on the plain. In addition to vast grasslands and vernal pools, plant communities include oak woodlands, with mixed hardwood and coniferous forest on the hills to the east (Honton and Sears 2006).

Area of Potential Effects

The area of potential effects (APE) is the 28.49-acre parcel at 2220 Fulton Road, as shown on the Sebastopol 7.5' USGS topographic map (Figure 2). This part of Sonoma County has remained relatively rural; though over the last 20 years several subdivisions have been developed to the north and south of the APE. A house and six outbuildings are found at the western end of the APE, but the majority of the parcel consists of open grassland (Figure 3). County records indicate that the house was constructed in 1930.

The APE is situated on nearly level land with little slope, if any. A subdivision constructed in 2006 covered or rerouted the closest portion of Abramson Creek from the APE, which once was 30 meters northwest of the northwest corner of the APE.

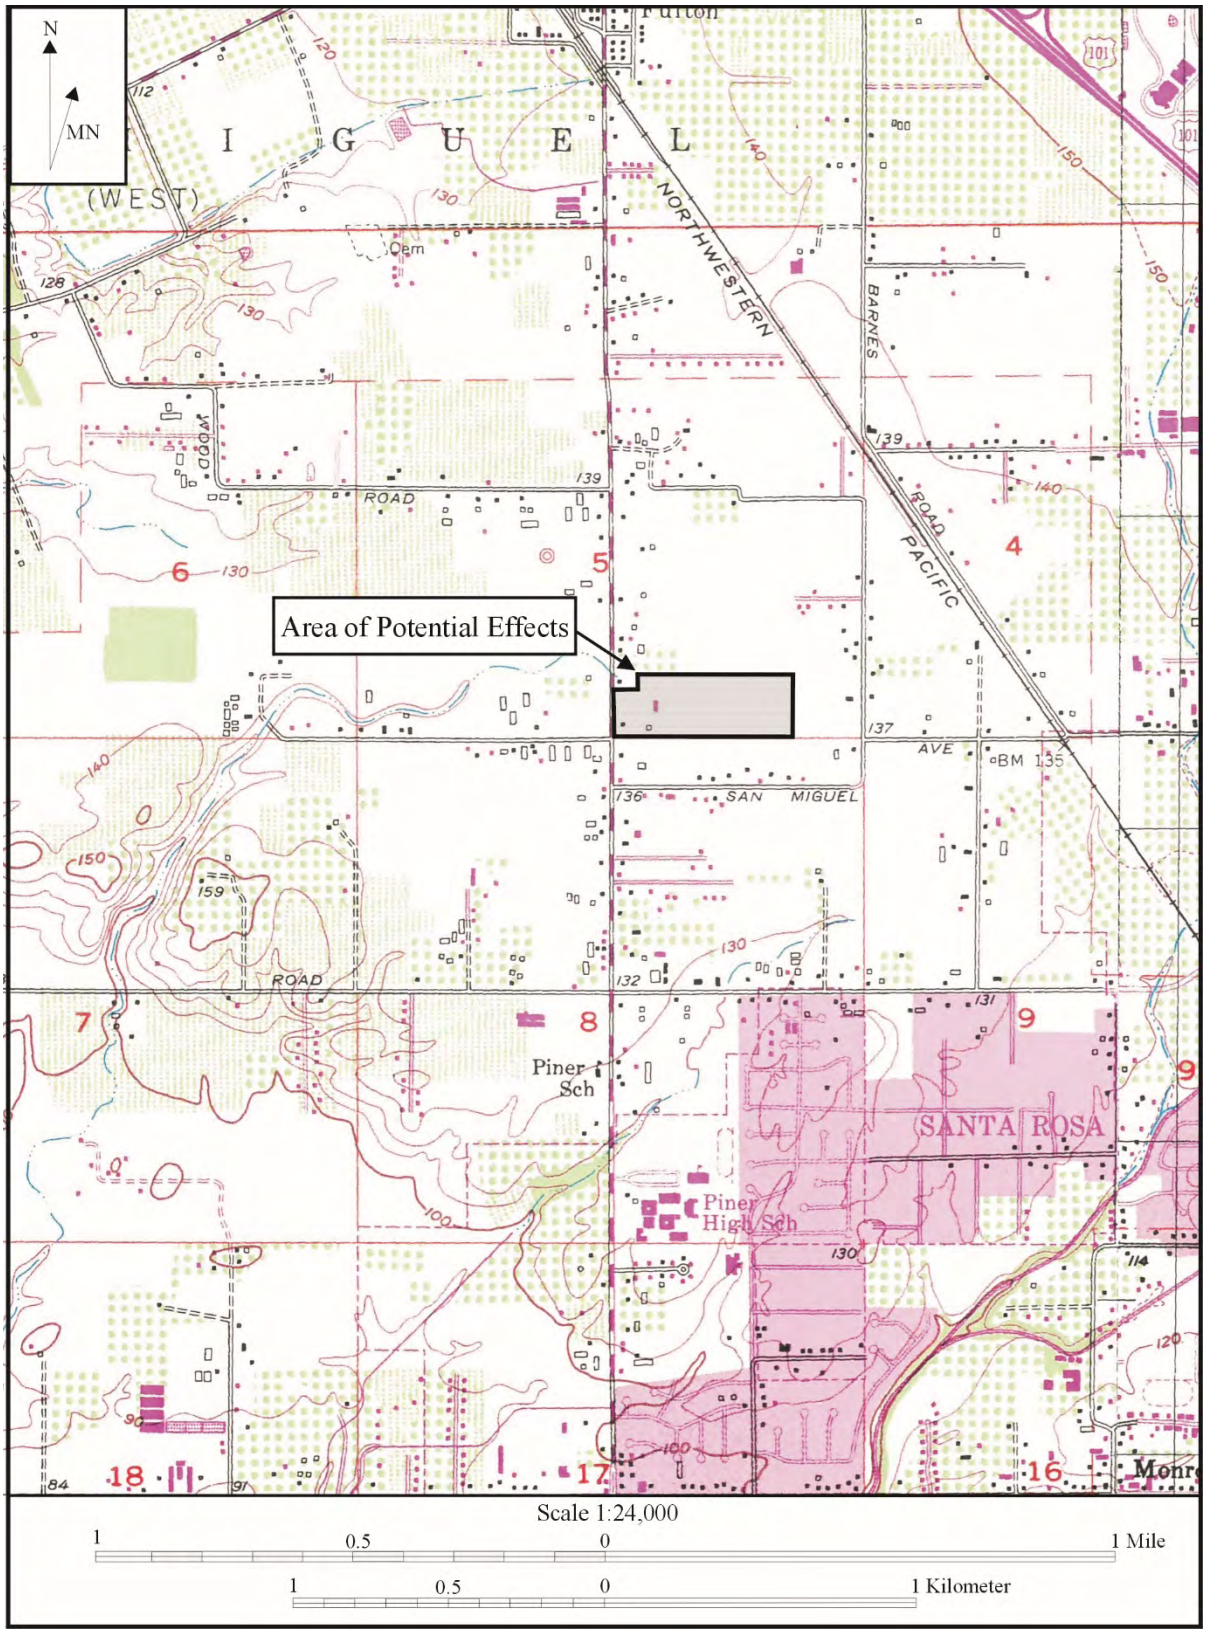

Figure 2. Location of the APE (adapted from the 1980 Sebastopol 7.5' USGS topographic map).

Figure 3. Overview of the APE, facing west.

The geology of the APE consists of Pleistocene (11,700 years ago to 2.588 million years ago) alluvial fan, stream terrace, and basin deposits (Qoa) (Delattre and Gutierrez 2008). These deposits are poorly sorted sand, silt, and gravel composed of Franciscan basement material with conspicuous red and green chert and lesser volcanic clasts. Soils mapped for the APE are Clear Lake clay and Huichica loams (Miller 1972: Sheet 74). Clear Lake soils are poorly draining clay soils found on plains and flat basin areas. In an uncultivated state, they support the growth of cannula or perennial grasses and forbs. Historically, these soils have been used for growing oat vetch hay and oat hay (Miller 1972:22). Huichica soils are moderately well-drained to somewhat poorly draining loams that have a clay subsoil. These soils are typically found on hummocky plains and terraces. In an uncultivated state, these soils support the growth of annual and perennial grasses and forbs, and scattered oaks. Historically, theses soils were used for dryland and irrigated pasture and for hay crops (Miller 1972:48).

Cultural Setting

Prehistory

The concept of prehistory refers to the period of time before events were recorded in writing and varies worldwide. Because there is no written record, our understanding of California prehistory relies

on archaeological materials and oral histories passed down through generations. Early archaeological research in this area began with the work of Max Uhle and Nels Nelson. Uhle is credited with the first scientific excavation in California with his work at the Emeryville Shellmound in 1902, and Nelson spent several years (1906 to 1908) surveying the San Francisco Bay margins and California coast for archaeological sites. In the 1930s, archaeologists from Sacramento Junior College and the University of California began piecing together a sequence of cultures primarily based on burial patterns and ornamental artifact from sites in the lower Sacramento Valley (Lillard *et al*. 1939; Heizer and Fenenga 1939). Their cultural sequence became known as the Central California Taxonomic System (CCTS), which identified three culture periods termed the Early, Middle, and Late Horizons, but without offering date ranges. Refinement of the CCTS became a chief concern of archaeologists as the century progressed with publications by Richard Beardsley (1948, 1954) and Clement Meighan (1955) based on materials excavated by the University of California archaeological survey.

In 1973, David Fredrickson synthesized prior work, and in combination with his own research, he developed a regional chronology that is used to this day, albeit modified for locality-specific circumstances. Fredrickson's scheme shows that native peoples have occupied the region for over 11,000 years (which is supported by Erlandson *et al*. 2007), and during that time, shifts took place in their social, political, and ideological regimes (Fredrickson 1973). While Fredrickson's chronology was adopted by many archaeologists, Beardsley's cultural sequence was adopted by others creating a roughly North Bay-South Bay division in usage.

In an effort to bridge the differences between chronologies, Milliken *et al*. (2007: Figure 8.4) presented a concordance for comparing time periods, cultural patterns, and local variations for the San Francisco Bay Area. Milliken included Dating Scheme D, as presented by Groza in 2002, which is a refinement of previous radiocarbon-based temporal sequences for the San Francisco Bay Area. More recently, Byrd, Whitaker, Mikkelsen, and Rosenthal (2017) called upon archaeologist to abandon previous temporal sequences in favor of Scheme D, further refined in Groza *et al*. 2011. Table 1 assimilates Scheme D, Fredrickson's (1973) chronology, and the obsidian hydration dating scheme from Origer (1987). Note that the Early, Middle, Late Horizon scheme is still evident though refinements have been made within those categories.

Early occupants appear to have had an economy based largely on hunting, with limited exchange, and social structures based on the extended family unit. Later, milling technology and an inferred acorn economy were introduced. This diversification of economy appears to be coeval with the development of sedentism and population growth and expansion. Sociopolitical complexity and status distinctions based on wealth are also observable in the archaeological record, as evidenced by an increased range and distribution of trade goods (e.g., shell beads, obsidian tool stone), which are possible indicators of both status and increasingly complex exchange systems.

These horizons or periods are marked by a transition from large projectile points and millingslabs, indicating a focus on hunting and gathering during the Early Period, to a marine focus during the Middle Period evidenced by the number of shellmounds in the Bay Area. The Middle Period also saw more reliance on acorns and the use of bowl-shaped mortars and pestles. Acorn exploitation increased during the Late Period and the bow and arrow were introduced.

Prehistoric archaeological site indicators expected to be found in the region include but are not limited to: obsidian and chert flakes and chipped stone tools; grinding and mashing implements such as slabs and hand-stones, and mortars and pestles; and locally darkened midden soils containing some of the previously listed items plus fragments of bone, shellfish, and fire affected stones.

Table 1. North Bay/San Francisco Bay Area Chronology

Temporal Period[1]	Approximate Time Range[1]	~ Hydration Interval (μ)[2]	Scheme D Periods[3]	Approximate Time Range[4]	~ Hydration Interval (μ)[5]
Historical	< A.D. 1800	<1.20	Historic Mission	A.D. 1835 to A.D. 1770	1.10 - 1.27
Upper Emergent	A.D. 1800 to A.D. 1500	1.21 - 1.84	Late 2	A.D. 1770 to A.D. 1520	1.28 - 1.80
Lower Emergent	A.D. 1500 to A.D. 1000	1.85 - 2.58	Late 1b	A.D. 1520 to A.D. 1390	1.81 - 2.02
			Late 1a	A.D. 1390 to A.D. 1265	2.03 - 2.22
			Middle/Late Transition	A.D. 1265 to A.D. 1020	2.23 - 2.55

Ethnography

Linguists and ethnographers tracing the evolution of languages have found that most of the indigenous languages of the California region belong to one of five widespread North American language groups (the Hokan and Penutian phyla, and the Uto-Aztecan, Algic, and Athabaskan language families). The distribution and internal diversity of four of these groups suggest that their original centers of dispersal were outside, or peripheral to, the core territory of California, that is, the Central Valley, the Sierra Nevada, the Coast Range from Cape Mendocino to Point Conception, and the Southern California coast and islands (Golla 2011).

At the time of European settlement, the APE was situated in an area controlled by the Southern Pomo (Barrett 1908; McLendon and Oswalt 1978). The Southern Pomo were hunter-gatherers who lived in rich environments that allowed for dense populations with complex social structures (Barrett 1908; Kroeber 1925). They settled in large, permanent villages about which were distributed seasonal camps and task-specific sites.

Primary village sites were occupied throughout the year, and other sites were visited in order to procure particular resources that were abundant or available only during certain seasons. Sites often were situated near fresh water sources and in ecotones where plant and animal life were diverse and abundant. For more information about the Pomo see Bean and Theodoratus (1978), Kniffen (1939), and Stewart (1943).

History

Historically, this part of Sonoma County was a small area of sectioned land surrounded by the San Miguel, Molinos, Rancho Canada de Jonive, Llano de Santa Rosa, and the Rancho Cabeza de Santa Rosa land grants (Thompson 1877). A 160-acre portion of land containing the APE was acquired by George Walker in 1868; though he is shown owning (or at least leasing and/or residing on the property) as early as 1867 (Bowers 1867). By 1877, Walker had sold his land to Joseph Foster. At this time, Foster was living in a house with his family approximately 1,100 feet northwest of the APE (the address is 2365 Fulton Road and recorded under P-49-003855). The 1898 county atlas shows that Foster divided his land and sold it, with the portion containing the APE acquired by R. Fiege (Reynolds and Proctor 1898). Over the years it appears that the tract of land containing the APE was further subdivided until the 1930s when the parcel was delineated into its current shape and size. Based on county records, the house on the property was constructed in 1930.

Although the APE is within the limits of the City of Santa Rosa, it remained a relatively rural part of the county until recent times when several residential subdivisions were constructed. Like the APE, there are still several parcels in the area that are undeveloped or may only contain a single-family home and associated outbuildings.

Historic period site indicators generally include: fragments of glass, ceramic, and metal objects; milled and split lumber; and structure and feature remains such as building foundations and discrete trash deposits (e.g., wells, privy pits, dumps).

STUDY PROCEDURES AND FINDINGS

Native American Contact

A request was sent to the State of California's Native American Heritage Commission (NAHC) by Tom Origer & Associates seeking information from the Sacred Lands File and the names of Native American individuals and groups that would be appropriate to contact regarding this project. Letters were also sent to the following groups:

Cloverdale Rancheria of Pomo Indians of California
Dry Creek Rancheria of Pomo Indians
Federated Indians of Graton Rancheria
Kashia Band of Pomo Indians of the Stewarts Point Rancheria
Lytton Rancheria of California
Middletown Rancheria of Pomo Indians of California
Mishewal-Wappo Tribe of Alexander Valley

This contact represents notification regarding the project to provide an opportunity for comment. It does not constitute consultation with tribes.

Native American Contact Results

A letter was received via email from Ryan Peterson, administrative assistant for the Middletown Rancheria Tribal Historic Preservation Department, on March 12, 2019. They have no comments at this time, but if evidence of human habitation is found they request that work stop immediately and that they be notified.

A response was received on March 12, 2019 from Brenda Tomaras of Tomaras & Ogas, LLP, representative of the Lytton Rancheria of California. Ms. Tomaras stated that the tribe has no specific information about the project but that the land does fall within their traditional Pomo territory. Ms. Tomaras further stated that artifacts, and sites may be encountered during the project and they will be consulting with the appropriate lead agency.

A response was received on March 12, 2019 from Dino Franklin, Chairman of the Kashia Band of Pomo Indians of the Stewarts Point Rancheria. He stated that he was unable to comment on the project and deferred to Lytton Rancheria of California or the Federated Indians of Graton Rancheria.

A response was received on March 25, 2019 from Buffy McQuillen, Tribal Historic Preservation Officer for the Federated Indians of Graton Rancheria. Ms. McQuillen stated that the project area is within the Tribe's ancestral territory and there may be tribal cultural resource impacts. Ms. McQuillen requested the results of the cultural resources study and the recommendations made based on those results.

No other responses have been received as of the date of this report. A log of contact efforts is appended to this report, along with copies of correspondence (see Appendix A).

Archival Research Procedures

Archival research encompassed lands within a quarter-mile of the APE. Julia Franco reviewed the archaeological site base maps and records, survey reports, and other materials on file at the Northwest Information Center (NWIC) on February 25, 2019 (NWIC File 18-1609). The library and project files at Tom Origer & Associates and various on-line databases were also reviewed. Sources of information included but were not limited to the current listings of properties on the National Register

of Historic Places, California Historical Landmarks, California Register of Historical Resources, and California Points of Historical Interest, as listed in the Office of Historic Preservation's *Historic Property Directory* (OHP 2012).

Ethnographic literature that described appropriate Native American groups was reviewed, and county histories and other primary and secondary sources were consulted. Early maps and aerial photographs were also examined to gain insight into the nature and extent of historical development in the general vicinity, and especially within the APE. All sources reviewed are listed in the "Materials Consulted" section of this report.

As part of the archival research, the potential for buried archaeological deposits was considered, and an assessment made of the APE's geology, historical hydrology, and other environmental factors. A model for predicting a location's sensitivity for buried archaeological sites was formulated by Byrd *et al.* (2017) based on the age of the landform, slope, and proximity to water. A location is considered to have the highest sensitivity if the landform dates to the Holocene, has a slope of five percent or less, is within 150 meters of fresh water, and 150 meters of a confluence. Note: the Holocene Epoch is the current period of geologic time, which began about 11,700 years ago, and coincides with the emergence of human occupation of the area. A basic premise of the model is that archaeological deposits will not be buried within landforms that predate human colonization of the area. Calculating these factors using the buried site model, a location's sensitivity will be scored on a scale of 1-10 and classed as follows: lowest (<1); low (1-3); moderate (3-5.5); high (5.5-7.5); highest (>7.5).

Archival Research Findings

Archival research found that the APE had not been subjected to a prior cultural resources study. Thirty cultural resources studies have been conducted within a half-mile of the APE (Table 2). Three of these studies were conducted adjacent to the APE (Chattan and Greene 2004; Steen and Origer 2008; Ward and Origer 1999). Six resources have been recorded within a half-mile of the APE. All of these resources are historic-era resources and would not extend into the APE (Table 3).

There are no reported ethnographic sites within one mile of the survey area (Barrett 1908).

Review of 19th and 20th century maps found no buildings within the APE until 1935 when a house is shown (Bowers 1867; General Land Office 1865; Reynolds & Proctor; Thompson 1877; USGS 1935). County records indicate that this house was constructed in 1930. The house and one outbuilding is shown on the 1954 USGS map; however, the 1952 aerial photo of the property shows that several outbuildings are present (University of Santa Barbara Library 1952; USGS 1954a).

Analysis of the environmental setting, especially landform age, slope, and distance to water, was weighed against Meyer and Kaijankoski (2017) analysis of sensitivity for buried sites. Per this model, there is the lowest potential (<1.0) for buried archaeological site deposits within the APE.

Field Survey Procedures

An intensive field survey of the 28.49-acre APE was completed by a three-person crew on March 14 and 30, 2019; six person-hours were expended. Surface examination consisted of walking in 15-meter transects using hoes as needed to expose the ground surface and examining soils from rodent burrows. Portions of the APE were inundated with water (see Figure 4). This hindered the ability to observe ground surface in these locations.

In addition to the surface survey, three auger borings were excavated using a 4-inch diameter barrel auger to examine subsurface soils (Figure 4). The borings were excavated to 50, 70, and 60 centimeters respectively. All of the augers started as a very wet loam that we easy to excavate. In

Boring 1, the hole began to fill with water at 20 centimeters, but this occurred at 50 centimeters in borings 2 and 3. Other than the influx of water, no changes were observed in the borings. All three borings were terminated when water/mud filled the hole and would not stay in the auger barrel.

Figure 4. Location of inundated areas and auger borings within the APE.

Field Survey Findings

Archaeology

No archaeological site indictors were observed during the survey. Additionally, no archaeological site indicators were found in the auger borings.

Built Environment

A house and six outbuildings are found within the APE. County records indicate that the house was constructed in 1930. The house is a one-and-a-half story, front gabled, frame building on a rectangular plan. The siding is stucco and the roof is composite shingles. Windows in the house are primarily one-over-one double hung sashes, with four exceptions. In the dormers on the north and south sides of the buildings the windows are fixed with bands of small rectangle-shaped panes above. In the gable on the front (west side) of the building, two windows of the same style as those in the dormers are present. At the rear (east side) of the building it appears there is a horizonal slider, and on the north side of the building there is a ribbon of three single-pane fixed windows. There are entrances to the first story on the front and on the rear. At the rear of the building (east side) a staircase has been constructed and provides direct access to the upper half-story of the building.

There are a few Craftsman-style elements added onto the building. These elements include brackets under the gables at both ends of the house (east and west sides), large support columns at the front porch, and the multi-paned windows that were previously mentioned.

The outbuildings consist of a gabled-roof garage, two chicken houses and three sheds. Appendix B contains documentation of this complex.

DISCUSSION AND RECOMMENDATIONS

Field survey of the APE found no archaeological site indicators on the ground surface, and none were observed in the auger borings. The house within the APE was constructed in 1930 according to county records. Observations of the building made during the field survey support this as well as review of aerial photos of the study area.

Recommendations

Archaeology

As no archaeological deposits were observed during the survey, no resource-specific recommendations are warranted. The potential for buried sites within the APE rates a sensitivity score of <1 out of 10, indicating that there is a very low possibility of encountering buried resources. In addition, the auger borings revealed no buried deposits. Estimates have been made that a very low sensitivity rating would mean that there is a less than 1% chance of finding a buried resource (Rosenthal and Meyer 2004:94).

Because of the very low sensitivity for buried resources, no further recommendations are warranted.

Built Environment

The buildings have the potential to meet criteria for inclusion on the CRHR and the National Register and should be evaluated.

Accidental Discovery

If buried materials are encountered, all soil disturbing work should be halted at the location of any discovery until a qualified archaeologist completes a significance evaluation of the find(s) pursuant to Section 106 of the National Historic Preservation Act (36CFR60.4). Prehistoric archaeological site indicators expected within the general area include: chipped chert and obsidian tools and tool manufacture waste flakes; grinding and hammering implements that look like fist-size, river-tumbled stones; and for some rare sites, locally darkened soil that generally contains abundant archaeological specimens. Historical remains expected in the general area commonly include items of ceramic, glass, and metal. Features that might be present include structure remains (e.g., cabins or their foundations) and pits containing historical artifacts.

The following actions are promulgated in the CEQA Guidelines Section 15064.5(d) and pertain to the discovery of human remains. If human remains are encountered, excavation or disturbance of the location must be halted in the vicinity of the find, and the county coroner contacted. If the coroner determines the remains are Native American, the coroner will contact the NAHC. The NAHC will identify the person or persons believed to be most likely descended from the deceased Native

American. The most likely descendent makes recommendations regarding the treatment of the remains with appropriate dignity.

SUMMARY

Tom Origer & Associates completed an archaeological resources study of the property at 2220 Fulton Road, Santa Rosa. The study was requested by Geoff Monk of Geoff Monk & Associates and was conducted in compliance with the US Army Corps of Engineers, Section 106 of the National Historic Preservation Act, the City of Santa Rosa, and CEQA. The buildings on the property could meet eligibility criteria for inclusion on the CRHR and the National Register and recommendations for an evaluation have been made. Documentation pertaining to this study is on file at Tom Origer & Associates (File No. 2019-017).

RE: 2220 Fulton Road, Santa Rosa, Sonoma County

Dear Ms. Hermosillo:

I am writing to notify you of a proposed project within the City of Santa Rosa, for which our firm is conducting a cultural resources study. The project proponent is proposing to develop a portion of the 28.5-acre property into a residential subdivision and the remainder the property being preserved as wetlands. The City of Santa Rosa is reviewing the project for California Environmental Quality Act compliance. The United States Army Corps of Engineers is reviewing the project for Section 106 of the National Historic Preservation Act compliance

This letter serves as notification of the project and does not constitute consultation.

Enclosed is a portion of the Sebastopol, Calif. 7.5' USGS topographic quadrangle showing the project location.

Sincerely,

Eileen Barrow

Re: 2220 Fulton Road, Santa Rosa, Sonoma County

Dear Ms. Barrow:

The Middletown Rancheria (Tribe) is in receipt of your letter dated February 28, 2019 regarding the above referenced project.

Though we have no specific comments at this time, should any new information or evidence of human habitation be found as the project progresses, we request that all work cease and that you contact us immediately. We do have a process to protect such important and sacred resources.

Thank you for the opportunity to provide comments to the above referenced project. The Tribe looks forward to continuing to be a part of the archaeological process.

Nothing herein should be construed to be a waiver of or limitation of any of the Tribe's rights in law, in equity, or otherwise. All rights, claims and remedies are specifically reserved.

Should you have any questions, please contact me.

Sincerely,

Larry Longee, Jr.

Good Afternoon Eileen,

Thank you for the letter regarding the above-referenced project. While the Tribe has no specific information which it could provide to you for inclusion in your reports, it believes that the project land falls within traditional Pomo territory and that there is a potential for finding tribal cultural resources on the project site. The Lytton Rancheria is interested in the protection and preservation of Pomo artifacts and sites and believes that such cultural resources may be encountered during the project.

The Tribe will be consulting further on the project with the appropriate lead agency and will get a copy of the survey once completed. We would ask that in your report you note all resources (flakes, isolates, etc.) even if they may not reach a level of significance under CEQA.

Thank you.

Dear Eileen Barrow,

Thank you for your outreach and request for identification of cultural resources from the Federated Indians of Graton Rancheria. The project area identified in your correspondence is within the Tribe's ancestral territory and there may be tribal cultural resource impacts. Please provide the Tribe with the results of your research efforts and recommendations. The information can be emailed or mailed to the following address.

e. Other Locational Information: From downtown Santa Rosa, take Highway 101 north to the Steele Lane exit. Take this exit and turn left (west). After a short distance, Steele Lane splits and the left split becomes Guerneville Road. Continue onto Guerneville Road and follow it for 2.25 miles to Fulton Road. Turn right and follow Fulton Road for 1.55 miles. The property at 2220 Fulton Road will be on the right side of the road.

P3a. Description: There is a house and six outbuildings. County records indicate that the house was constructed in 1930. The house is a one-and-a-half story, front gabled, frame building on a rectangular plan. The siding is stucco and the roof is composite shingles. Windows in the house are primarily one-over-one double hung sashes, with four exceptions. In the dormers on the north and south sides of the buildings the windows are fixed with bands of small rectangle-shaped panes above. In the gable on the front (west side) of the building, two windows of the same style as those in the dormers are present (see Continuation Sheet for additional description).

P12. Attachments: Continuation Sheet (3), Location Map

P3a. Description: (continued from Primary Record)

At the rear (east side) of the building it appears there is a horizonal slider, and on the north side of the building there is a ribbon of three single-pane fixed windows. There are entrances to the first story on the front and on the rear. At the rear of the building (east side) a staircase has been constructed and provides direct access to the upper half-story of the building

There are a few Craftsman-style elements added onto the building. These elements include brackets under the gables at both ends of the house (east and west sides), large support columns at the front porch, and the multi-paned windows that were previously mentioned. The photo on the Primary Record, and Figures 1 and 2 are photos of the house.

The outbuildings consist of a gabled garage, two chicken houses and three sheds. Figures 3-8 show pictures of the buildings, and Figure 9 is a schematic of the buildings in relation to eachother.

The garage is a wood-framed gabled building on a rectangular plan. The foundation is a concrete slab and the current roof material is corrugated metal. The siding is wood but is different on every side of the building. The siding in the front gable appears to be horizontal drop siding, the south side has lapped siding, the rear had board-on-batten, and the north side has a different style of dropped siding than the front. There is a window that has been covered with corrugated metal and plywood on the south side and a small rectangular opening on the east side that has also been covered with corrugated metal. Figure 3 is a picture of this building.

The northernmost chicken house is a wood-framed gabled building on a rectangular plan. The roof was wood shingles and there are eight square vents in the roof on the east side of the building. There are six doors on the east elevation that would have opened out to pens. There is a covered walkway on the west and south sides of the building. The north end has collapsed and there may have been more roof vents and pen doors. Figure 4 is a picture of this building.

The southernmost chicken house is also a wood-framed gabled building on a rectangular plan. The foundation is a concrete slab. Like the garage, the siding varies, with the north and west wall consisting of vertical boards, the eastern wall and part of the southern wall board-on-batten, and the remainder of the eastern wall a different type of vertical board siding. There are doors on the east and west ends. There are no piercings on the north side, but on the southside there are several square windows, some of which have been covered with corrugated plastic. The roof is wood shingle, though corrugated metal added on top of the shingles at the west end. Figure 5 is a picture of this building.

The northern most shed is a gabled rectangular building clad in corrugated metal. There are two square windows on the west side and one square window on the east side. There is a large door on the north side. The roof is wood shingles. Figure 6 shows a picture of this building.

The central shed is a wood-framed gabled building on a rectangular plan. Like many of the other buildings described, the siding is a mish-mash of types including horizontal boards and dropped siding. There are two doors and a window on the south side and a single window on the north and east sides. Figure 7 is a picture of this building.

The southernmost shed is a small, gabled building on a rectangular plan. Some of the wall material appears to be salvaged from other buildings and tacked on to this building, though the majority of the siding looks like dropped siding. There are two windows on the east side and one on the north side. A door is also on the north side. The roof is wood shingles, though it is mostly collapsed. Figure 8 is a picture of this building.

February 2020

EXECUTIVE SUMMARY

Proposed Undertaking: The proposed project (Project) will encompass a 28.49-acre parcel (APN 034-030-070) at 2220 Fulton Road, and will be comprised of development of the western half of the parcel into a residential subdivision with associated infrastructure, and the eastern half of the parcel into a wetland preserve. The proposed Project will result in the removal of all buildings and structures located on the subject parcel.

Purpose and Scope of the Survey: Daly & Associates was retained to conduct a survey of the proposed Project area and provide a historic evaluation for built-environment resources located at 2220 Fulton Road. The resulting report develops the historic context for the proposed Project area located in Santa Rosa, Sonoma County, California. The Project falls under the regulatory authority of Section 106 of the National Historic Preservation Act (NHPA).

Summary of Investigation: An intensive-level field survey was made of the property by Architectural Historian Pamela Daly, M.S., on December 16, 2019. The fieldwork consisted of inspecting the extant built-environment resources located on the subject property, observing the overall interrelationship of the structure and surrounding landscape, to determine if there is evidence of a historical resource.

Summary of Findings: Our investigation revealed that the house and associated outbuildings located at 2220 Fulton Road were constructed in 1930 by Joseph and Mary Memeo as a home farm. There is no evidence that the subject property was associated with any persons or events from when this area south of Fulton Station was first settled in the 1870s, or with the agricultural history of Sonoma County. The dwelling and outbuildings of the subject property present no unique design or technology that would cause them (individually or collectively) to be considered an advancement in the history of egg or chicken ranches. The subject property was improved in 1930, but does not appear to have the capacity to convey any historic association to the history of Santa Rosa or Sonoma County of the 1930s. While the property at 2220 Fulton Road does not appear to have met the criteria to be determined a historic property for listing in the National Register of Historic Places, it has maintained sufficient levels of physical integrity for its history to be evaluated for significance.

Disposition of Data: Copies of this report will be filed with FirstCarbon Solutions and the Northwest Information Center at California State University, Sonoma. Original documentation will remain on file at Daly & Associates, Riverside, California.

1.0 INTRODUCTION

This report provides a historic evaluation, and develops the historic context, of the built-environment resources located on the property at 2220 Fulton Road, in the City of Santa Rosa, Sonoma County, California (Figure 1). The proposed project (Project) will encompass a 28.49-acre parcel (APN 034-030-070) at 2220 Fulton Road, and will be comprised of development of the western half of the parcel into a residential subdivision with associated infrastructure, and the eastern half of the parcel into a wetland preserve. The proposed Project will result in the removal of all buildings and structures located on the subject parcel.

The Project area is to the northwest of the city center of Santa Rosa, and accessed from Fulton Road, which was known historically as Rural Free Delivery (RFD) Route 2. Before the property was annexed by the City of Santa Rosa in the 1970s, the subject property was most closely associated with the settlement of Fulton, located 1.45 miles directly north of the subject property, and the Piner School District. Figure 2 presents the location of the Project in Section 5 of Township 7 North, Range 8 West, on the Sebastopol 1980 USGS 7.5-minute topographic map (Mount Diablo Base and Meridian). A current aerial view of the Project area is presented in Figure 3.

This study was conducted in order to identify any potentially significant built-environment resources over 50 years of age that may be adversely affected by the Project. The evaluation of the built-environment resource in the Project area was conducted by Pamela Daly, M.S., a qualified Architectural Historian, under Section 106 of the National Historic Preservation Act of 1966 (as amended) (NHPA). Contained within this report is the baseline data used to determine the potential eligibility of the built-environment resources located at 2220 Fulton Road for inclusion in the National Register of Historic Places (NRHP).

1.1 Report Organization

Chapter 1.0 of this report, Introduction, provides an overview of this project and its scope, and presents the legislative requirements that mandate the report's preparation. Chapter 2.0, Methods, details the methods used to inventory the properties located within the proposed Project area, including a discussion of the NRHP criteria. Chapter 3.0, Historic Context, provides a short history of the subject property and the surrounding area. Chapter 4.0 presents a physical description of the built-environment resources located within the proposed Project area. Chapter 5.0 presents the recommendations for NRHP eligibility, and Chapter 6.0, Bibliography and References, presents the cited works and other materials used in the preparation of this report. Appendix A presents the qualifications of the person performing the evaluation of the subject property, and Appendix B contains the California Department of Parks and Recreation series 523 (DPR 523) property inventory forms for the built-environment resources situated on the subject property.

1.2 Legislative Requirements

The NHPA requires federal agencies to consider the effects of a proposed project on historic properties. Section 106 of NHPA stipulates a process for compliance, defines the responsibilities of the federal agency proposing the action, and prescribes the relationships among other involved agencies (e.g., State Historic Preservation Officer [SHPO], tribes, interested parties, and the Advisory Council on Historic Preservation [ACHP]). Compliance with the requirements of Section 106 ideally involves five steps: (1) identification of any cultural resources that could be affected by the implementation of an undertaking; (2) a determination of significance of any cultural resources identified within the area of potential effects (APE); (3) an assessment of the impacts or effects of the undertaking; (4) SHPO and/or ACHP comment; and (5) development and implementation of mitigation measures to address adverse effects. An undertaking can include a broad range of activities, including modification, repair, or maintenance of historic buildings, property transfer, or demolition.

Historic properties, under 36 Code of Federal Regulations (CFR) Part 800.16 (l) (1), are defined as:

> …any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion in, the NRHP maintained by the Secretary of the Interior. This term includes artifacts, records, and remains that are related to and located within such properties….

Only cultural resources determined to be significant (i.e., historic properties) are subject to protection or consideration by a federal agency. Significance criteria and integrity are discussed in Chapter 2.0, Methods.

1.3 Previous Historic Property Investigations within the Area of Potential Effects

Archival research found that the APE had not been subjected to a prior historical resources study. Tom Origer & Associates performed an intensive archaeological field survey of the 28.49-acre APE on March 14 and 30, 2019. No formal evaluation of the built-environment resources has been performed to date.

1.4 Data Collection

The Northwest Information Center (NWIC) is a branch of the California Historic Resources Information System (CHRIS), established by the Office of Historic Preservation (OHP), and maintains information

concerning cultural resources and associated studies recorded in their respective counties. A cultural resources records search for the current Project was performed at the NWIC on February 26, 2019 by Julia Franco of Tom Origer and Associates.[1] The records search provided information on historic resources and associated studies recorded within a half-mile radius surrounding the Study Area. During the records search, the OHP's Historic Property Data File (HPDF), as well as a variety of publications and manuscripts, was consulted. The HPDF includes the following types of properties:

- National Register of Historic Places (NRHP or National Register);
- California Historical Landmarks (CHL);
- California Historical Resources Inventory;
- California Points of Interest (PHI); and
- California Register of Historical Resources (CRHR or California Register).
- 1935 USGS Sebastopol, CA 1:48,000
- 1942 USGS Sebastopol, CA 1:62,500
- 1954 USGS Sebastopol, CA 1:24,000
- 1980 USGS Sebastopol, CA 1:24,000

Resources surveyed within a half-mile of the APE

Tom Origer & Associates	2005	P-49-003855	House/small dairy	1,100 feet

2.0 METHODS

The current survey of the built-environment resources in the Project area included archival research at local depositories, internet research, and a pedestrian-level inspection of the proposed Project area that contains built-environment resources. These data were used to prepare the descriptions of the built-environment resources currently within the study area, and prepare contextual statements and site-specific history. This will provide sufficient baseline data to formulate conclusions about whether the built-environment resources located in the Project area would, or would not, meet the National Park Service (NPS) criteria for inclusion in the NRHP as stipulated in 36 CFR Part 60.4.

2.1 NRHP Criteria for Historic Property Evaluation

The criteria used to evaluate potential historic properties are stated in 36 CFR Part 60.4, and are restated herein, to provide readers with background regarding the NRHP process.

To be eligible for listing in the NRHP, a resource must be significant in American history, architecture, archaeology, engineering, or culture. Districts, sites, buildings, structures, and objects of potential

[1] Barrow, Eileen. "Archaeological Study of the Property located at 2220 Fulton Road, Santa Rosa, Sonoma County, California." Tom Origer & Associates, Rohnert Park, CA; March 2019.

significance must also possess integrity of location, design, setting, materials, workmanship, feeling, and association. Four criteria have been established to determine the significance of a resource:

A. It is associated with events that have made a significant contribution to the broad patterns of our history;

B. It is associated with the lives of persons significant in our past;

C. It embodies the distinctive characteristics of a type, period, or method of construction or that represents the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction;

D. It yields, or may be likely to yield, information important to prehistory or history.

A property eligible for the NRHP must meet one or more of the above criteria and retain integrity. In addition, unless the property possesses exceptional significance, it must be at least 50 years old to be eligible for NRHP listing.

Ordinarily, cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the past 50 years shall not be considered eligible for inclusion in the NRHP. However, such properties will qualify if they are integral parts of districts that do meet the criteria, or if they fall within the following categories:

a. A religious property deriving primary significance from architectural or artistic distinction or historical importance; or

b. A building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or

c. A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his productive life; or

d. A cemetery which derives its primary significance from graves of persons of transcendent importance from age, from distinctive design features, or from association with historic events; or

e. A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or

f. A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or

g. A property achieving significance within the past 50 years if it is of exceptional importance.

In addition to meeting the criteria of significance, a property must have integrity. "Integrity is the ability of a property to convey its significance."[2] According to the NRHP Bulletin, *How to Apply the National Register Criteria for Evaluation*, within the concept of integrity, the NRHP criteria recognize seven aspects or qualities that, in various combinations, define integrity. To retain historic integrity a property will always possess several, and usually most, of these seven aspects. The retention of specific aspects of integrity is paramount for a property to convey its significance.

The seven factors that define integrity are location, design, setting, materials, workmanship, feeling, and association. The following is excerpted from NRHP Bulletin, *How to Apply the National Register Criteria for Evaluation*, which provides guidance on the interpretation and application of these factors.

- Location is the place where the historic property was constructed or the place where the historic event occurred.
- Design is the combination of elements that create the form, plan, space, structure, and style of the property.
- Setting is the physical environment of a historic property.
- Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.
- Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.
- Feeling is property's expression of the aesthetic or historic sense of a particular period of time.
- Association is the direct link between an important historic event or person and a historic property.

In assessing a property's integrity, the NRHP criteria recognize that properties change over time; therefore, it is not necessary for a property to retain all its historic physical features or characteristics. The property must, however, retain the essential physical features that enable it to convey its historic identity.

For properties that are considered significant under NRHP Criteria A and B, the NRHP Bulletin, *How to Apply the National Register Criteria for Evaluation* states that a property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s).

In assessing the integrity of properties that are considered significant under NRHP Criterion C, the NRHP Bulletin, *How to Apply the National Register Criteria for Evaluation* provides that a property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique.

2.2 Historical Research

The evaluation of the built-environment resources located in the Project study area involved a review of the history of Sonoma County and the City of Santa Rosa area that includes the community of Fulton.

[2] *National Register Bulletin 15,* page 44.

Research was performed at the Sonoma County Library History and Genealogy Annex, and with internet resources using historic maps and surveys, historic aerial photographs, historic newspapers, and genealogical information retrieved for persons associated with the subject property.

2.3 On-Site Evaluation Process

An intensive-level field survey was conducted on December 16, 2019 by Architectural Historian Pamela Daly, M.S. The fieldwork consisted of inspecting each of the buildings and structures, and the overall interrelationship of the built-environment resources with the surrounding landscape that is located within the Project area.

The evaluation by Daly & Associates examined each built-environment resource in the context of its surrounding landscape, noting the condition of the existing structure, construction materials, function, and any noteworthy physical elements of the resource. The field survey also included obtaining color digital photos of the structure, elevations, and surrounding landscape. This information was used to create baseline data to determine the potential eligibility of the subject property as a historical resource.

2.4 Interested Parties

For the current study, the Historical Society of Santa Rosa, Sonoma Valley Historical Society, and Western Sonoma County Historical Society were contacted regarding the proposed Project at 2220 Fulton Road. Outreach was in the form of both emails and hard copy letters to each organization. A request was made of these organizations to present any information they may have regarding the history, or historical significance, of the subject property outside of readily available information.

As of February 6, 2020, we have not received a response from any of the organizations by email, telephone, or letter.

3.0 HISTORIC CONTEXT

Sonoma was one of the original counties formed when California became a state in 1850, and the town of Santa Rosa became the county seat in 1854. The settlement of Santa Rosa was created from land that had been part of the San Miguel, Molinos, Rancho Canada de Jonive, Llano de Santa Rosa, and Rancho Cabeza de Santa Rosa holdings (Figure 4). Land grants were sold by the U.S. Government in the nineteenth-century to open settlement into lands that had been previously retained for the paths of the railroads. In the 1860s, Sonoma County was associated primarily with agricultural endeavors, and the towns of Santa Rosa, Petaluma, and Healdsburg were regional centers of commerce and occupation.

The economic future of the town of Santa Rosa improved with the establishment of the San Francisco and North Pacific Railroad (SF&NP) service to Sonoma County in 1869. The California Northwestern Railway Company was formed on the SF&NP lines in 1898 as part of Southern Pacific Railroad (SPRR) ambitions to reach the redwood lumber mills in Northern California.

Both the SPRR and the Atchison, Topeka and Santa Fe Railway (AT&SF) were interested in constructing railway lines to connect San Francisco to the great lumber operations at Eureka and Arcata in Humboldt

County. SPRR and AT&SF formed a partnership to create one railroad line that ran from Sausalito to Eureka. The Northwestern Pacific Railroad (NWP) line was created in 1898 to provide both freight and passenger services on the route that ran through Santa Rosa and Sonoma County. This access to rail service helped the town of Santa Rosa maintain a hold on its being the governmental center of Sonoma County. The Rand-McNally Guide to California via the Santa Fe Route published in 1900, states that Santa Rosa "is an elegant place of residence, in the center of a large fruit and wine district".[3]

With the increased popularity and affordability of automobile and truck usage, and the improvement of roads and highways, both passenger and freight rail service declined in the early 1930s. World War II and the resulting housing boom after the war caused the NWP service to increase - particularly for shipping wood products. While smaller branches off of the main line have been shut down for many years, and rehabilitation of the railbed from severe flooding damage north of Windsor has proved costly, the NWP continues to run (under new ownership) between Schellville and Windsor, with service to Santa Rosa.[4]

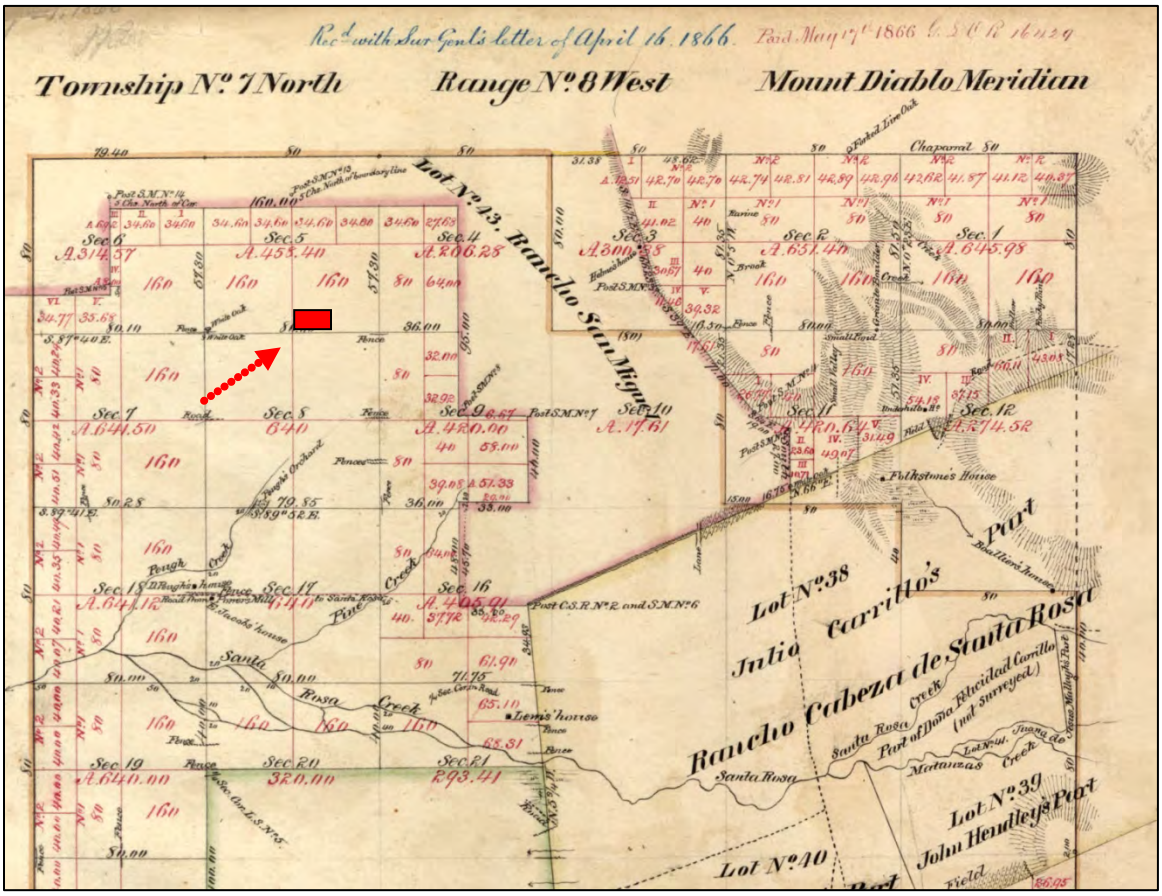

Figure 4: Excerpt from 1866 Plat Map of Township 7 North, Range 8 West, Mount Diablo Base Meridian, showing Section 5. The subject property is located in the southwest quarter, of the southeast quarter of Section 5. (Source: http://www.glorecords.blm.gov)

[3] Rand-McNally & Company. Guide to California via the Santa Fe Route; New York: 1900. Page 195.
[4] Northwestern Pacific Railroad. https://www.nwprailroad.com/history

In 1868, George B. Walker acquired 160 acres of land just south of the small settlement of Fulton Station, which was located on the rail line just 4.75 miles to the north of Santa Rosa. Walker was granted the southeast quarter-section of Section 5, Township 7 North, Range 8 West, in the Mount Diablo Base Meridian. Although George Walker was recorded as a resident of Sonoma County in the 1860 Census, he appears to have acted as a "front man" for E.N.B. Jackson of Santa Rosa. Jackson purchased the property from Walker just one day after Walker had his patent recorded in Sonoma County.[5] Jackson bought the land from Walker for $1,200 (gold coin), and the sale was recorded in the county records by John Brown, Justice of the Peace.

E.N.B. Jackson was a "general merchant" in the City of Santa Rosa, and his name appears occasionally in the local newspapers as being either a buyer or seller of land in the Fulton or Santa Rosa area.[6] Jackson sold 285 acres of his land near Fulton Station that included the subject property for $7,000 to Joseph Foster in 1874, and Foster's holdings are recorded in the regional map in *New Historical Atlas of Sonoma County, California, of 1877*.[7]

Published in 1897, the *Illustrated Atlas of Sonoma County, California*, presents evidence that Foster had to disperse his holdings, and the subject property was now under the ownership of R. Feige.[8] In 1908, the Sonoma County Survey Map has the subject property area owned by the partnership of "[Giovanni] Mazzoni and [Enrico/Henry] Santini".[9] Giovanni Mazzoni was a dairyman who resided on Rural Free Delivery (RFD) Route 3 in Santa Rosa, and Santini in the Fulton Precinct.[10] The *Sonoma County School District Map of 1926-1928*, presents a map of the area showing the subject land is now owned by Joseph [Memeo] Nemeo [sic].[11] The Memeo property of 30 acres is located within the Piner Third Road School District.[12]

Joseph Memeo had been born in Italy in 1892, and immigrated to the United States in 1911. He lived in the area of Crow's Landing in 1917, before settling in the Petaluma area near other members of his extended family. In 1919, he married Mary who had emigrated from Italy in 1902, and they had four children while farming in the Petaluma area until the late 1920s, when they moved to Fulton. It appears he settled on the subject parcel of land located in the area noted as the Fulton East Voting District in 1929-30. Sonoma County Assessor records data states that the house on the property at Box 709, Route 2 (Fulton Road) was constructed in 1930.

Tragically, Joseph Memeo died in 1932 shortly after building the house, but his widow continued to live on the property and raise their four boys. Three of their four sons served in the armed services during World War II, and returned to settle in the Sonoma County area. Mary appears to have stayed at the property until 1948, when she then moved to Maple Street in Santa Rosa.

4.0 HISTORIC STRUCTURES EVALUATION

The area surveyed under the current Project is comprised of 28.49 acres, and situated on Assessor Parcel Number 034-030-070-000, Tract 004112. The Project site is accessed from Fulton Road through a gate, with the house and barns scattered on the property. (Figure 5 has a historic aerial of the property in 1953) The property is flat, with large open areas away from the house. Scattered near the house are walnut trees, and an apple and plum tree. Due to confidentiality considerations, Sonoma County Building Department could only provide the date of construction for the house on the property.[13]

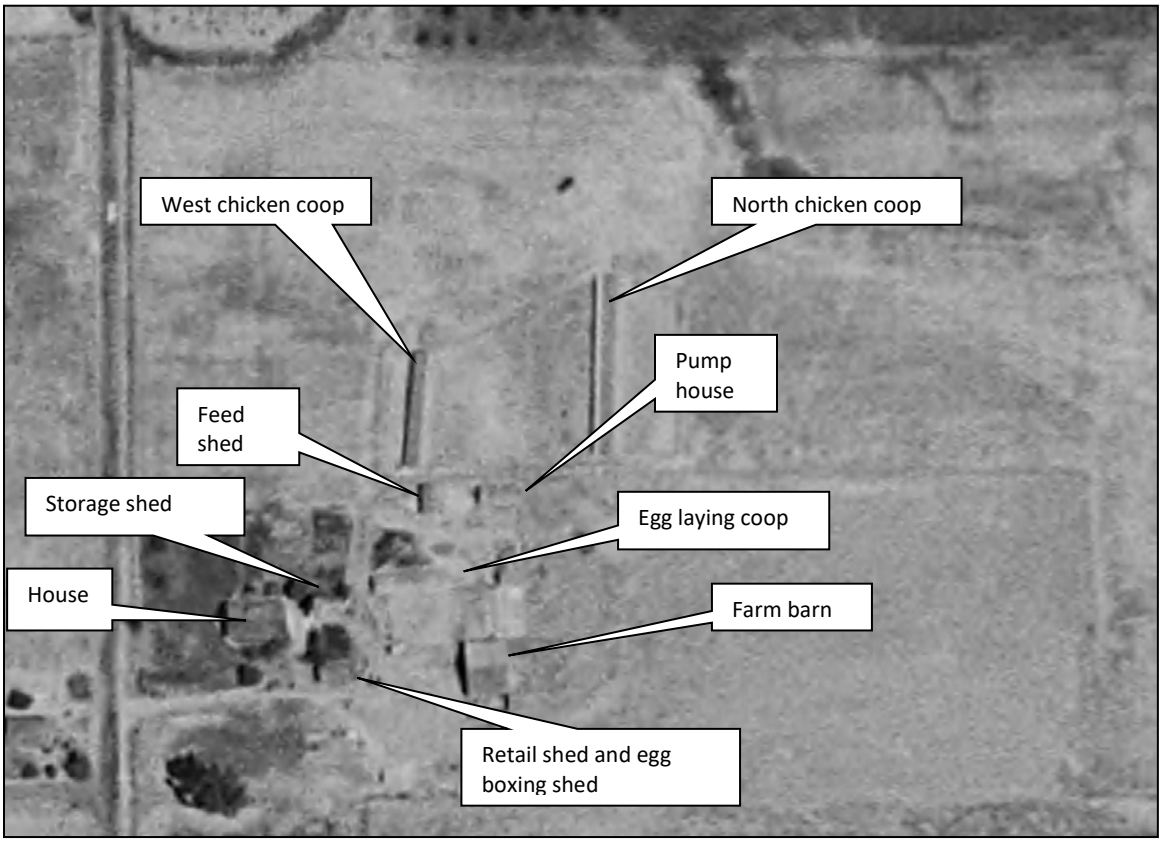

Figure 5: Aerial view of the property in 1953. The West Chicken Coop, Pump House, and Farm Barn no longer exist on the property.

Extant buildings and structures

1. House

   Located to the north of the driveway into the property, is a one-and-one-half story dwelling, which according to Sonoma County records was constructed in 1930 (Figure 6). The house appears to be a Craftsman style house with a gable-front roof and entrance to the building. The structure has a rectangular mass, measuring approximately 53 feet long by 30 feet wide, and is constructed with a basement. There is a poured concrete porch with steps on the front

[13] Without a signed, corporate resolution from the current owners (a private corporation) giving us permission for access, Sonoma County would not allow access to any building permits on-file for the property.

elevation that was created by recessing the first floor entrance approximately 13 feet from the overhang of the half-story. The overhang is supported at each end of a segmental arch by square posts set on a solid porch railing. The gable roof has a medium-high pitch, and set on both the roof slopes are shed roof dormers. Both the main roof and dormer roof have overhanging eaves with exposed rafter tails. Large, decorative brackets support the eaves, and support a decorative window box on the gable-front. Smaller brackets support the outside corners of the dormer roofs. The frame building is clad with a rough stucco finish. The fenestration is primarily one-over-one wood sash windows on the first level, and the dormer windows comprised of small, square, individually framed fixed lights. The rear (east) elevation of the building has been substantially altered at some point in time with the installation of a sliding glass door, wood deck, and staircase to the backyard (Figure 7).

Figure 6: West (front) and south elevations of the house. View looking northeast.

Figure 7: East (rear) and north elevations of the house. View looking southwest.

2. North chicken coop/horse stable

The largest chicken house is located to the northeast of the collection of buildings on the property (Figure 8). This is a wood-framed gabled building on a rectangular plan that measures approximately 154 feet long by 20 feet wide. Based on the evidence of modern horse stable stall guards situated within the sections of the building visible on the east elevation, the building was converted at some point in time to keep horses for recreational use. There are still some remaining wood shingles in place on the roof, but the roof system and the entire building have suffered from the ravages of time. The northern one-third of the structure has totally collapsed.

Figure 8: View from the south of north chicken coop that was converted for use as a horse stable.

3. Egg laying coop

The chicken coop situated closest to the house, is also a wood-framed gabled building on a rectangular plan, and it measures approximately 66 feet long by 16 feet wide (Figure 9). The foundation is a poured concrete slab. The siding on the building appears to primarily be vertically set tongue-and-groove and plank siding. The roof is wood shingle, though corrugated metal has been added on top of the shingles at the west end. Openings were set in the upper portion of the southern wall of the coop to allow chickens access to a large fenced yard. Pedestrian doors are set on the west gable end, and on the south elevation.

Figure 9: South elevation of egg laying coop with chicken yard. View looking north.

4. Feed shed

This shed may have been used to keep the chicken feed safe from rodents, as evidenced by the corrugated steel panel walls and roof (Figure 10). The building measures approximately 24 feet long by 14 feet wide, and is constructed with a wood frame.

Figure 10: West and south elevations of storage/feed shed. View looking northeast.

5. Storage shed

The storage shed is a wood-framed, metal-roofed, gable building that has a rectangular mass and measures approximately 26 feet long by 12 feet wide (Figure 11). The structure is set on a base of stone and concrete supports. The siding appears to be wide shiplap placed over plain flat boards. There are two pedestrian doors on the south elevation, and ground-level openings on the north elevation.

Figure 11: Storage shed located directly east of the house. View looking northwest.

6. Egg boxing shed

This small building set to the rear of the sales shed/garage, may have been where the eggs were cleaned and boxed for sale (Figure 12). During the years of the Great Depression, the farm would have most probably also sold "past their prime" chickens for consumption. The building appears to have the same, wide shiplap siding as found on some of the other outbuildings. The building is severely deteriorated.

Figure 12: Chicken and egg sales prep shed located to the rear of the sales shed. View looking northwest.

7. Sales shed/garage

Our investigation of the rectangular-massed structure that was believed to be a garage for housing automobiles, was instead a farm stand built by the Memeos for selling eggs and chickens to the general public (Figure 13). The wood frame structure with a metal-clad gable roof that measures 24 feet long by 20 feet wide, does not have the large framing members usually found encasing the front entranceway where a garage door would be situated. Instead, set along the interior walls are flat sheets of plywood used as wallboard. The poured concrete floor is very thin, providing only a covering for the floor for pedestrian use, not for supporting automobiles. The Egg Boxing shed is located immediately to the rear of the sales shed, allowing for eggs to be prepped prior to being set out for sale. The sales shed would have been easily accessible from passersby on Fulton Road, and there was plenty of room for parking near the shed.

Figure 13: Open front shed for selling eggs and poultry.

5.0 NRHP ELIGIBILITY DETERMINATION AND RECOMMENDATION

5.1 Overview

The main objective of the assessment of the Project area is to provide an evaluation of significance and NRHP eligibility recommendation for the built-environment resources found within the property. The baseline level of documentation provided in this report presents the information necessary to make such an evaluation. Once the recommendation of eligibility is made, future management considerations for the subject property can be determined.

Pursuant to 36 CFR Section 800.4, it is required that federal agencies perform an evaluation of historic structures that are over 50 years old located within a proposed project area, and that have not been previously evaluated for NRHP eligibility. As part of this current assessment report, the built-environment resources located at 2220 Fulton Road were evaluated using the four NRHP criteria to determine the eligibility of the historic property (see Section 2.0, Methods). Based on the NRHP criteria, the property was then evaluated for its possession of historic integrity: location, design, setting, materials, workmanship, feeling and association, within its historic context.

Physical integrity of the subject property was studied and evaluated during the field inspection. The assessment of the significance of a property within its historic context was based on NPS guidelines.

1. Identify the historic context represented by the property.

2. Determine how the theme of context is significant in local, state, or national history.

3. Determine if the property type represents the context.

4. Determine how the property illustrates an important aspect of history.

5. Determine if the property retains the physical features necessary to convey its significance (historic integrity).

5.2 NRHP Recommendations

The proposed Project calls for the demolition or removal of the existing built-environment resources situated on the property at 2220 Fulton Road. The Project area was subject to an intensive-level survey, and the history of the property and its owners was gathered from Bureau of Land Management Patent Land grant documents, regional and local maps, and historic newspaper articles. Information from these sources and the Sonoma County Assessor's Office revealed Joseph Memeo, his wife Mary and four children, settled on the land and built the house thereon in 1929-1930.

The property at 2220 Fulton Road does not appear to be considered significant under Criterion A of the NRHP. The house was constructed in 1929-1930 on land that had not been improved until that time, possibly due to the natural wetlands that comprise a majority of the eastern portion of the subject parcel. Memeo appears to have established a poultry and egg ranch on his land, and dry-farmed the wetlands when possible. Historic aerial photographs present evidence that these activities continued into the 1980s. Research did not reveal that the Memeo ranch contributed to the history of poultry-

keeping in the area of Fulton or Santa Rosa, or with any events that made a significant contribution to the agricultural history of the region or Sonoma County.

The property at 2220 Fulton Road has not been found to be directly associated with any persons important to the history of Santa Rosa, California, or the United States, and does not appear significant under Criterion B of the NRHP. Research did not uncover any substantial contributions by persons residing at the property important to the history of the local area, Santa Rosa, or Sonoma County.

The residence and outbuildings at 2220 Fulton Road were constructed on the subject property almost 60 years after the land had been sold in 1868 as excess railroad lands by the General Land Office. The residence is not a significant or exceptional example of a Craftsman style house, and the outbuildings are those that would have been constructed to support a home-based egg and chicken ranch. The residence and outbuildings are not the product of the work of a master craftsman or engineer, and do not possess high artistic value. The outbuildings do not embody any distinctive or rare characteristics of method of construction. The property at 2220 Fulton Road does not appear eligible for listing under Criterion C as a resource significant to the history of Santa Rosa, California, or the United Sates.

The property at 2220 Fulton Road does not appear to have the capacity to yield information important to the prehistory or history of Santa Rosa, Sonoma County, or California. The property does not appear eligible for listing in the NRHP under Criterion D.

The property at 2220 Fulton Road has retained most aspects of its historic integrity. Those aspects include its location, design, materials, workmanship, feeling, and association as a rural, agriculturally-based endeavor that dates to the early twentieth-century. The setting of the agricultural property has been compromised by the encroachment of modern housing developments.

The property at 2220 Fulton Road does not appear eligible for listing in the NRHP due to its unremarkable design and its lack of historic significance even though the dwelling and structure has retained its levels of physical integrity.

5.3 Mitigation Measures

As the property at 2220 Fulton Road does not appear eligible for listing in the NRHP, there are no mitigation measures required to be performed before the removal of the buildings and structures within the APE.

APPENDIX A:
Preparer Qualifications

Pamela Daly, M.S.H.P., Principal Architectural Historian
Daly & Associates, 4486 University Avenue, Riverside, California 92501
(951) 369-1366 daly.rvrsde@sbcglobal.net

Ms. Daly is a Qualified Architectural Historian with more than 22 years of experience in historic resource management and consulting in California, Vermont, New York, and Nevada. She earned a Bachelor of Science degree in Business Management from Elmira College in Elmira, New York, and a Master of Science degree in Historic Preservation at University of Vermont. Ms. Daly's coursework in Historic Preservation included the study of American Architecture, Historic Landscapes, and Building Conservation Techniques.

Ms. Daly has expertise not only in assessing and evaluating classic residential architectural styles of the United States dating from the eighteenth to the twenty-first century, but she has a wide range of experience in the survey and evaluation of military sites and structures in both the western and eastern United States. She has performed studies on airplane hangars, military housing, helicopter hangers, ammunition bunkers, flight simulators, and Cold War radar arrays. Industrial archaeological sites include automobile and railroad bridges, irrigation canals and ditches, gravity-fed water supply systems, sewer treatments systems, gold mines, water-pumping systems, privately-owned reservoirs, electric transmission line towers, roads, historic signage, airplane hangars, steam-powered belt and pulley systems, and a historic zanja.

Studies of built-environment resources include archival research, field investigation, significance criteria and determinations, assessment of impacts/effects, management plans, and mitigation implementation. Mitigation measures include preparation of Historic American Building Survey (HABS) documentation, Historic American Engineering Record (HAER) documentation, Historic American Landscape (HALS) documentation, interpretive signage, layout and production of brochures, websites, and video displays. Ms. Daly has also worked with clients with historically significant buildings to restore or rehabilitate them in accordance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties*.

Ms. Daly has experience with federal agencies including U.S. Air Force, U.S. Navy, U.S. Army Reserve, U.S. Army Corps of Engineers, Bureau of Land Management, the U.S. Forest Service, the National Park Service, and U.S. Fish & Wildlife. She is accepted as a principal investigator for both Architectural History and History by the California State Office of Historic Preservation, and holds the qualifications to work throughout the United States. Ms. Daly belongs to the National Trust for Historic Preservation, Vernacular Architecture Forum, Society of Industrial Archaeology, and Association of Preservation Technology.

*Recorded by: Pamela Daly, M.S.H.P. *Date: February 6, 2020 ☒Continuation ☒Update

P3a. Description, continued:

The frame building is clad with a rough stucco finish. The fenestration is primarily one-over-one wood sash windows on the first level, and the dormer windows comprised of small, square, individually framed fixed lights. The rear (east) elevation of the building has been substantially altered at some point in time with the installation of a sliding glass door, wood deck, and staircase to the backyard.

2.North chicken coop/horse stable
The largest chicken house is located to the northeast of the collection of buildings on the property. This is a wood-framed gabled building on a rectangular plan that measures approximately 154 feet long by 20 feet wide. Based on the evidence of modern horse stable stall guards situated within the sections of the building visible on the east elevation, the building was converted at some point in time to keep horses for recreational use. There are still some remaining wood shingles in place on the roof, but the roof system and the entire building have suffered from the ravages of time. The northern one-third of the structure has totally collapsed.

3.Egg laying coop
The chicken coop situated closest to the house, is also a wood-framed gabled building on a rectangular plan, and it measures approximately 66 feet long by 16 feet wide. The foundation is a poured concrete slab. The siding on the building appears to primarily be vertically set tongue-and-groove and plank siding. The roof is wood shingle, though corrugated metal has been added on top of the shingles at the west end. Openings were set in the upper portion of the southern wall of the coop to allow chickens access to a large fenced yard. Pedestrian doors are set on the west gable end, and on the south elevation.

4.Feed shed
This shed may have been used to keep the chicken feed safe from rodents, as evidenced by the corrugated steel panel walls and roof. The building measures approximately 24 feet long by 14 feet wide, and is constructed with a wood frame.

5.Storage shed
The storage shed is a wood-framed, metal-roofed, gable building that has a rectangular mass and measures approximately 26 feet long by 12 feet wide. The structure is set on a base of stone and concrete supports. The siding appears to be wide shiplap placed over plain flat boards. There are two pedestrian doors on the south elevation, and ground-level openings on the north elevation.

6.Egg boxing shed
This small building set to the rear of the sales shed/garage, may have been where the eggs were cleaned and boxed for sale. During the years of the Great Depression, the farm would have most probably also sold “past their prime” chickens for consumption. The building appears to have the same, wide shiplap siding as found on some of the other outbuildings. The building is severely deteriorated.

7.Sales shed/garage
Our investigation of the rectangular-massed structure that was believed to be a garage for housing automobiles, was instead a farm stand built by the Memeos for selling eggs and chickens to the general public. The wood frame structure with a metal-clad gable roof that measures 24 feet long by 20 feet wide, does not have the large framing members usually found encasing the front entranceway where a garage door would be situated. Instead, set along the interior walls are flat sheets of plywood used as wallboard. The poured concrete floor is very thin, providing only a covering for the floor for pedestrian use, not for supporting automobiles. The Egg Boxing shed is located immediately to the rear of the sales shed, allowing for eggs to be prepped prior to being set out for sale. The sales shed would have been easily accessible from passersby on Fulton Road, and there was plenty of room for parking near the shed.

Re: 2220 FULTON RD, SANTA ROSA, CA 95403
Stonebridge Subdivision - 28.6 acre parcel to develop 14.6 acre portion with 105 single-family dwelling units with remaining 14.0 acres dedicated as a habitat preserve.
PRJ19-049

Ms. Tomaras:

The subject project is being referred to the Lytton Rancheria of California to provide written notification in compliance with AB-52 (Native Americans: California Environmental Quality Act). As such, a request for consultation with the City of Santa Rosa regarding this project and its potential impacts to tribal cultural resources must be made in writing within 30 days of the date of this letter and addressed to the project planner. Within 30 days of the written request, the City will begin the consultation process.

Any exchange of information regarding tribal cultural resources as a result of consultation with the City, will not be included in the environmental review document or otherwise disclosed by the lead agency or any other public agency to the public, without prior consent of the tribe that provided the information.

Please respond in writing no later than Thursday, March 19, 2020 to KToomians@srcity.org or by mail to:

City of Santa Rosa
PLANNING & ECONOMIC DEVELOPMENT

February 18, 2020

Federated Indians of Graton Rancheria
Buffy McQuillen
6400 Redwood Dr. Ste. 300
Rohnert Park, CA 94928

Re: 2220 FULTON RD, SANTA ROSA, CA 95403
Stonebridge Subdivision - 28.6 acre parcel to develop 14.6 acre portion with 105 single-family dwelling units with remaining 14.0 acres dedicated as a habitat preserve.
PRJ19-049

Ms. McQuillen:

The subject project is being referred to the Federated Indians of Graton Rancheria to provide written notification in compliance with AB-52 (Native Americans: California Environmental Quality Act). As such, a request for consultation with the City of Santa Rosa regarding this project and its potential impacts to tribal cultural resources must be made in writing within 30 days of the date of this letter and addressed to the project planner. Within 30 days of the written request, the City will begin the consultation process.

Any exchange of information regarding tribal cultural resources as a result of consultation with the City, will not be included in the environmental review document or otherwise disclosed by the lead agency or any other public agency to the public, without prior consent of the tribe that provided the information.

Please respond in writing no later than Thursday, March 19, 2020 to KToomians@srcity.org or by mail to:

City of Santa Rosa
Planning and Economic Development
Attention: Kristinae Toomians
100 Santa Rosa Avenue, Room 3
Santa Rosa CA 95404

If you have any questions regarding this application, please contact me at (707) 543-4692.

draft

THIS PAGE INTENTIONALLY LEFT BLANK

Stonebridge Subdivision Project Summary Energy Use

Summary of Energy Use During Construction		(Annually)
Construction off-site vehicle fuel	29,582	gallons (gasoline, diesel)
Construction on-site equipment fuel	88,393	gallons (diesel)
Construction office electricity	32,885	kilowatt hours

Summary of Energy Use During Proposed Operations		(Annually)
Operation vehicle fuel	100,857	gallons (gasoline, diesel)
Operation natural gas	3,051,830	kilo-British Thermal Units
Operation electricity	849,510	kilowatt hours

Summary of Energy Use During Existing Operations		(Annually)
Operation vehicle fuel	830	gallons (gasoline, diesel)
Operation natural gas	29,065	kilo-British Thermal Units
Operation electricity	8,091	kilowatt hours

Increase in Energy Use from Existing Operations to Proposed Operations (Annually)		
Additional operation vehicle fuel	100,027	gallons (gasoline, diesel)
Additional operation natural gas	3,022,765	kilo-British Thermal Units
Additional operation electricity	841,419	kilowatt hours

Construction Vehicle Fuel Calculations

California Air Resource Board. 2019. EMFAC2014 Web Database. March. Website: https://www.arb.ca.gov/emfac/2014/. Accessed December 9, 2019

VMT = Vehicle Miles Traveled
FE = Fuel Economy

EMFAC2014 (v1.0.7) Emissions Inventory
Region Type: County
Region: Sonoma
Calendar Year: 2021
Season: Annual
Vehicle Classification: EMFAC2007 Categories
Units: miles/day for VMT, trips/day for Trips, tons/day for Emissions, 1000 gallons/day for Fuel Consumption

									Calculations

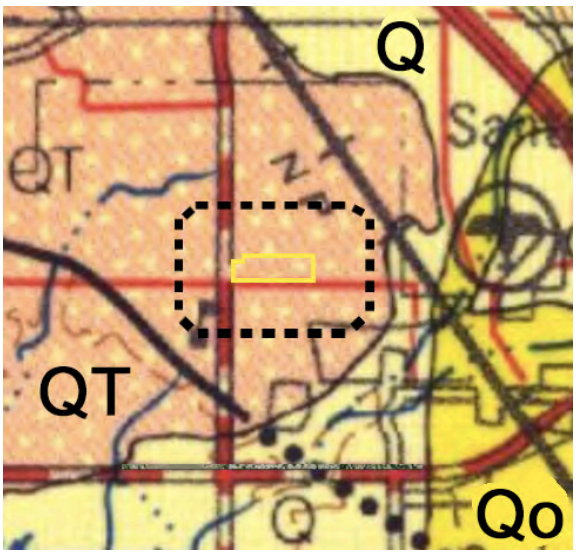
Re: Paleontological Records Search: Stoneridge Subdivision Project (5144.0001), City of Santa Rosa, Sonoma County

Dear Dr. DePietro:

As per your request, I have performed a records search on the University of California Museum of Paleontology (UCMP) database for the proposed Stoneridge Subdivision project in Santa Rosa. This 26.5 project site is on flat terrain on the east side of Fulton Road, between Tedeschi Drive and Orleans Street. Its PRS location is S½, S½, SE¼, Sec. 5, T7N, R8W, Sebastopol quadrangle (2015 USGS 7.5'-series topographic map). Google Earth imagery shows the parcel is barren of structures, mostly covered with grass and a few trees in the NW and SW corners. It may have been used as an agricultural field in the past.

Geologic Mapping

On the part of the Wagner and Bortugno (1982) geologic map shown here, the surface of the project site (yellow outline at center) and surrounding half-mile search area (dashed black outline) are entirely on Pliocene beds of the Huichica and Glen Ellen Formations (QT). The other units shown on this part of the map are Holocene alluvium (Q) and older (late Pleistocene) alluvium (Qo); being younger than QT, neither would be present in the subsurface of the project site.



Paleontological Records Search

A paleontological records search of the UCMP database revealed that Sonoma County has 10 late Pleistocene (Rancholabrean) vertebrate localities. The recovered fossils include *Clemmys* (Western pond turtle), *Mammut americanum* (American mammoth), *Bison antiquus* (extinct bison), *Glossotherium harlani* (Harlan's ground sloth), *G. robustus* (robust ground sloth), and *Equus* (horse). Although there are 11 Pliocene vertebrate localities in Sonoma County, none are in the Huichica or Glen Ellen formations. Sonoma County is also represented by 11 Pliocene plant lo-

calities in the Sonoma Tuffs (Sonoma Volcanics), which yielded a diverse Pliocene flora that includes numerous type specimens established by Dorf (1930), but that unit is not mapped in the vicinity of the project site.

Paleontological Assessment and Mitigation Recommendations

Although the Glen Ellen or Huichica formations are continental deposits that could contain significant paleontological resources, no significant paleontological resources are recorded from those units on the UCMP database. Hence, the project site appears to have no paleontological potential or sensitivity. I therefore do not recommend a pre-construction paleontological walkover of the site or paleontological monitoring of earth-disturbing activities. In the highly unlikely event that any significant fossils (i.e., bones, teeth, or unusually abundant and well-preserved invertebrates or plants) are unearthed, construction activities are to be diverted at least 15 feet away from the discovery until a professional paleontologist assesses the find for possible salvage and deposition in an appropriate repository such as the UCMP.

Sincerely,

Ken Finger

Attention: Mr. David Jacobson

Subject: Phase I Environmental Site Assessment Report
2220 Fulton Road
Santa Rosa, California 95403

Dear Mr. Jacobson:

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13/AAI of 2220 Fulton Road in Santa Rosa, California, the property. Any exceptions to, or deletions from, this practice are described in Section 1 of this report. This assessment has revealed **no obvious evidence of a recognized environmental condition** in connection with the property that warrants further investigation and/or documentation at this time.

Should you have any questions regarding this report, please contact the undersigned.

Sincerely,

Basics Environmental, Inc.

Zachary Shamroukh
Project Manager

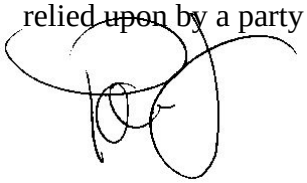
PHASE I ENVIRONMENTAL SITE ASSESSMENT
2220 Fulton Road
Santa Rosa, California
For
D.M. Jacobson and Sons, Inc.
19-ENV5373
March 21, 2019

I declare that, to the best of my professional knowledge and belief, 1 meet the definition of “Environmental Professional” as defined by the Environmental Protection Agency's Final Rule (40 CFR 312.21). I have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting. In performing Phase I Environmental Site Assessments, I develop and perform the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

The findings, interpretations of data, recommendations, specifications or professional opinions are presented within the limits prescribed by available information at the time the report was prepared, in accordance with generally accepted professional environmental practice and within the requirements by the Client. There is no other warranty, either expressed or implied. The data and findings of this report are based on the readily available data and information obtained from numerous public and private agencies regarding the subject site and its immediate vicinity. Additional search (at greater cost) may or may not disclose information which may significantly modify the findings of this report. We accept no liability on completeness or accuracy of the information presented and or provided to us, or any conclusions and decisions which may be made by the Client or others regarding the subject site.

This report was prepared solely for the benefit of Basic's Client. Basics consents to the release of this report to third parties involved in the transaction for which the report was prepared, including without limitation, lenders, title companies, public institutions, attorneys, and other consultants. However, any use of or reliance upon this report shall be solely at the risk of such party and without legal recourse against Basics, or its subcontractors, affiliates, or their respective employees, officers, or directors, regardless of whether the action in which recovery of damage is sought is based upon contract, tort (including the sole, concurrent or other negligence and strict liability of Basics), statute or otherwise. This report shall not be used or relied upon by a party that does not agree to be bound by the above statements.



Donavan G. Tom, M.B.A., E.P., R.E.P.A.
Principal Consultant

1.0 INTRODUCTION

1.1 Purpose of Investigation

Basics Environmental, Inc. (Basics) has performed this Phase I Environmental Site Assessment (ESA) for D.M. Jacobson and Sons, Inc. pursuant to our signed agreement on March 4, 2019. The "subject site" is at 2220 Fulton Road, Santa Rosa, California (APN 034-030-070). The purpose of this ESA is to:

- Observe site conditions at the property in accordance with the protocols set forth by the *American Society for Testing and Materials (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* and *U.S. Environmental Protection Agency's All Appropriate Inquiry (AAI) Final Rule 40 CFR Part 312*, except where modified by the proposal;

- Identify to the extent feasible recognized environmental conditions in connection with the subject site. The ESA is intended to evaluate the potential for the presence of hazardous or toxic chemicals in the soil and/or groundwater resulting from past and present land use activities. To the extent possible, potential sources of hazardous or toxic chemicals from adjacent off-site operations will also be evaluated; and

- Render findings and professional opinion regarding the potential for adverse environmental impacts on or adjacent to the site.

1.2 Scope of Work

The scope of work performed for this ESA consisted of the following tasks:

- Field reconnaissance and personal interviews to evaluate environmental land-use conditions on the subject site and view adjacent properties;

- Aerial photograph, City Directory and/or Fire Insurance/Topographic Map review (typically back to 1940 or first developed use of the property) to evaluate former environmental land-use conditions on the subject site and adjacent properties;

- Review of federal, state and county files and environmental database search report obtained from a commercial service providing up to date and current information;

- Evaluation of the physical setting (geomorphic, geologic and hydrogeologic) of the subject site property; and

- Preparation of this ESA report to present the findings and professional opinions regarding potential recognized environmental conditions on the site.

The work for this ESA was performed within the client approved scope of work and budget for the investigation.

1.3 Special Terms and Conditions

The goal of this ESA is to identify recognized environmental conditions indicating the presence or likely presence of any hazardous substances or petroleum hydrocarbons in structures, ground, groundwater, or surface water of the property. Recognized environmental conditions are not intended to include *de minimis* conditions that do not present risks to public health or environment and that would not be subject to enforcement actions by government agencies.

1.4 Limitations and Exceptions

This ESA only includes a visual evaluation of the presence of asbestos, lead paint, radon, or mold, if applicable. In addition, this ESA does not include the results of any sampling, monitoring, or other types of field and/or laboratory testing or investigation.

1.5 User Responsibilities

The user of this ESA will be responsible for: (1) determining the relationship of the purchase price to the value of the property; (2) disclosure of specialized knowledge, experience or information which may affect the environmental condition of the subject site; and (3) disclosure of any environmental cleanup liens against the property within recorded land title records, if applicable. None of the above was provided by the client for our review, however a previous Phase I Environmental Site Assessment was provided for our review.

2.0 SITE DESCRIPTION AND RECONNAISSANCE

2.1 Site Description and Uses

2.1.1 Interviews

A Basics representative (Mr. Zachary Shamroukh) visited the subject site on March 20, 2019. Basics observed the various facilities and operations conducted at the site and also noted the land-use in the vicinity of the site. Ms. Linda Peterson arranged access with to available areas. Ms. Peterson was also briefly interviewed prior to the site visit. A standard environmental questionnaire was provided to Mr. David Jacobson, owner's representative for the subject site, to obtain disclosure of specialized knowledge, experience or information that may affect the environmental condition of the subject site; however, Mr. Jacobson did not complete the questionnaire prior to report submission.

Discussions with Ms. Peterson indicated to her knowledge that the site is currently developed with a small residential dwelling on the southwest portion. According to Mr. Peter Hellmann of Builders Land Group, the rest of the roughly 28–acres currently consists of both uplands and federally protected wetlands. Ms. Peterson indicated that, for purposes of this assessment, she has no other specialized knowledge or experience pertaining to the site or the adjacent properties that is material to RECs in connection with the subject property.

Additional information obtained from the interviews is incorporated within the appropriate sections of this report.

2.1.2 Site Description and Uses

The subject site is located in the City of Santa Rosa, along the west side of Fulton Road, approximately 500-feet to the north of the corner of Fulton Road and San Miguel Avenue, and approximately one mile to the northwest of the Santa Rosa Creek (See Drawings 1 and 2). The subject site consists a 28.49-acre "rectangular" shaped parcel of land improved on the southwestern portion with a five (5) bedroom, one (1) bathroom, 1,824-square foot two-story residential dwelling (See Photos 1-4) with associated sheds, paved and landscaped areas.

The two-story residential dwelling is composed of wood framing on concrete perimeter foundation with stucco covered masonry exterior walls.

Utilities including electric and natural gas are publicly supplied. An onsite well is located on site and supplies water. Sewage is handled by an onsite septic system. Underground services for natural gas, water, and sanitary sewers traverse the sidewalk and street along the west side of the subject site. No obvious evidence of electrical transformers was observed at the subject site. However, telephone mounted electrical transformers were noted along Fulton Road. Such units are notable because they may be a polychlorinated biphenyl (PCB) source. PCB units may subject the owner/operator to various requirements. The release of PCB fluids or their combustion products (in the event of a fire) is a potential environmental liability and may require remediation. Observations of the area surrounding these features did not reveal any obvious signs of PCBs, hazardous material stains and/or spills. In addition, these features appeared to fairly new with no labels identifying PCBs. Due to the age of the features and lack of PCB labels the probability of PCBs is low.

The general area surrounding the property is developed residential. The subject site is zoned Planned Development (PD 04-007). A site plan illustrating the site and adjacent properties is shown in Drawing 3.

The two-story residential dwelling (2220 Fulton Road) is currently occupied by private residents and utilized as a residential dwelling.

2.1.3 Environmental Land-Use Conditions

The subject site was evaluated for the use and storage of hazardous substances and petroleum products; use of aboveground and underground storage tanks, storage and disposal of hazardous wastes; evidence of releases from hazardous materials, and identification of conduits to the subsurface.

Two-Story Residential Dwelling and Associated Sheds (2220 Fulton Road) (circa 1930) - The five bedroom one bathroom two-story residential dwelling is located on the southwestern portion of the subject site. The main entrance to the building is located on the west side of the building. Two additional doors are located along the east side of the building, one of which is

accessible via an exterior stairway and provides access to the second floor (See Photos 1-3). Discussions with Ms. Peterson indicated to her knowledge no hazardous materials, underground fuel storage, or heating oil tanks are utilized onsite. She stated that a roughly 80-year old couple has occupied the residential dwelling for a long time. Discussions with Mr. Jacobson indicated that a septic tank is currently utilized onsite. Due to private occupancy, visual observations were limited to the exterior areas. General observations of the exterior of the dwelling did not reveal any obvious signs of hazardous materials, stains and/or spills.

The two-story residential dwelling is bordered on the eastern portion with five (5) dilapidated sheds. All five sheds are constructed with wood framing and wood exterior walls, and most are extremely run-down with no doors or a crumbling frame. The sheds are utilized to store common household items and supplies (bikes, tools, storage, etc.) (See Photos 1-4). General observations of the sheds did not reveal any obvious signs of hazardous materials, stains and/or spills.

Associated Outside Areas – The outside areas consist of the large federally protected wetlands, and paved and landscaped area.

Wetlands – Occupying the eastern portion of the subject site are federally protected wetlands. Throughout this area are several surface water ponds and vernal pools supporting biodiversity in the Santa Rosa plain (See Photos 5-11). General observations of the wetlands area did not reveal any obvious evidence of hazardous materials. Visual observations of the wetlands area did not reveal any other obvious evidence of drains, sumps of other conduits to the subsurface.

Associated Paved and Landscaped Areas - The associated paved and landscaped area is located on southwest portion of the subject site, along the north, south, east and west perimeters of the residential dwelling. A gravel driveway and parking area for the residential dwelling is located along the southern perimeter of the house and is accessible via Fulton Road to the west. The associated landscaped areas are located along the subject site perimeters and interspersed between the subject site buildings and associated paved areas.

Visual observations of the rest of the associated paved and landscaped areas did not reveal any obvious signs of hazardous materials or spills. No obvious evidence of underground

fuel storage tanks, distressed vegetation, or surface impoundments were observed throughout the associated paved and landscaped areas during the inspection.

2.2 Adjacent Properties

2.2.1 Immediate Adjacent Properties

Sites in the vicinity of the subject site were observed during the site reconnaissance to evaluate conditions or businesses indicative of hazardous or potentially toxic materials use.

The following are the uses of the adjoining properties.

North - Several Two-Story Residential Dwellings (2324-2480 Tedeschi Drive) and Wetlands
South - Several Two-Story Residential Dwellings (2255-2487 Orleans Street)
East - Residential Dwelling with Associated Sheds (2193 Francisco Avenue) and Undeveloped Land
West - Fulton Road followed by a Residential Dwelling and Associated Sheds (2265 Fulton Road)

Visual observations of the immediate adjacent properties did not reveal any obvious potential business activities indicative to the use, storage and/or treatment of hazardous materials. In addition, no obvious evidence was noted at the immediate adjacent properties that would represent a significant environmental concern to the subject site.

2.2.2 Wells

Located within the western portion of the subject site, near the residential dwelling, is an onsite well and associated well house. The interior of the well house was not observed. General observations of the exterior of the well house did not reveal any obvious evidence of hazardous materials, stains or spills. No obvious evidence of groundwater monitoring wells was noted on or nearby the subject site.

2.3 Non-ASTM E1527 Considerations

2.3.1 Asbestos Containing Construction Materials

An asbestos survey was not conducted at the property as part of this assessment. However, the subject site structures were confirmed to have been constructed before 1979, the year asbestos containing construction materials was banned, thus, asbestos may have been utilized in their construction. No obvious evidence of friable or non-friable suspect asbestos containing materials was observed within easily accessible areas of the structure. Visual observations of the easily accessible areas of the structure appeared to be in fair condition with no obvious signs of significant health risk concerns.

Asbestos is a mineral fiber that occurs in rock and soil. Because of its fiber strength and heat resistance asbestos has been used in a variety of building construction materials for insulation and as a fire retardant. Original building materials not easily accessible including, but not limited to, flooring and masting materials, sheet rock muds and taping compounds, ceiling and roofing materials, and ducting and surfacing materials may contain ACCMs. To confirm if any asbestos materials are contained within the structure on the subject site, an asbestos survey should be performed by an AHERA trained asbestos professional. If the property building is slated for renovation or demolition, an asbestos inspection will be required, pursuant to the National Emission Standards for Hazardous Air Pollutant (NESHAPs).

2.3.2 Lead-Based Paint

A lead-based paint survey was not conducted at the property as a part of this assessment. However, the subject site structures were confirmed to have been constructed before the ban on lead-based paints in 1978, thus, lead-based paints may have been utilized in their construction. Visual observations of the painted surfaces of the subject site structure appeared to be in fair condition with no obvious signs of chipping, cracking, and/or significant health risk concerns.

Lead-based paint is any paint, varnish, stain, or other applied coating that has 1 mg per square cm (or 5,000 µg/g by dry weight) or more of lead. In Section 1017 of the Housing and

Urban Development Guidelines, Residential Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as " Title X", states that a lead-based paint hazard is "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact lead-based paint on most walls and ceilings would not be considered a "hazard," although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard.

2.3.3 Radon

Radon testing was not conducted at the property as a part of this assessment. However, based on the Map of Radon Zones provided by the United States Environmental Protection Agency (EPA), there is a moderate potential that radon concentrations at, or above, 4 picocuries per liter (pCi/l) are present at the site. Concentrations at, or above, 4 pCi/l are considered to be concentrations of concern per Cal-EPA and EPA. Based on the map, radon has been detected in Sonoma County at average levels below 2 pCi/l. Additional information can also be obtained from the California Department of Public Health's Radon Program which provides a list of radon test results from throughout the state which are sorted by zip code.

Radon is a naturally occurring radioactive gas that is odorless, invisible, and without taste. It is released during the natural decay of uranium, which is present in most rock, soil and water. Its occurrence in the state is influenced primarily by geology. Radon can be found throughout California because uranium exists in all rock and soil. Although certain areas of the state are more likely to contain higher radon levels than others, radon is a house-to-house issue. You may live in an area of low radon potential yet your house can have elevated radon but your neighbor's house has a low radon level. Radon, in its natural state cannot be detected with the human senses. To confirm if any radon is contained within the structure on the subject site, testing should be performed by an EPA-authorized state certified radon testing professional.

2.3.4 Mold

A mold survey was not conducted at the property as a part of this assessment. However, no obvious evidence of mold or water damaged materials were observed within easily accessible areas of the structures.

In general, mold is a subset of the fungi family. Fungi are common and found in most ecosystems. Fungi is needed to help recycle organic material to sustain plant and animal life. In order to reproduce, mold release tiny spores into the air, which eventually attach onto surfaces favorable for growth. A class of fungi, molds have been found to cause a variety of health problems in humans, including allergic, toxicological, and infectious responses. Molds are decomposers of organic materials, and thrive in humid environments, and produce spores to reproduce as plants produce seeds. When mold spores land on a damp spot indoors, they may begin growing and digesting whatever they are growing on in order to survive. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problems remain undiscovered or not addressed.

Currently, there are no established “sound, science-based Permissible Exposure Limits (PELs) for indoor molds at this time”. As mold becomes a more prevalent issue, building owners will need to stay informed on the subject. There are dozens of Internet web sites geared to the topic, and increased litigation in this area is also fueling increased interest. With any new trend there often is misinformation, incorrect conclusions, and conflicting information. Those involved in the building industry should consider the source and weight of information carefully before drawing conclusions and making decisions.

To confirm if any mold is present within the structure on the subject site, laboratory test and sampling can be performed by a qualified industrial hygienist for various species of fungi such as Aspergillus, Cladosporium, Stachybotris and other mycotoxyns, and bacteria families such as Legionella, etc. However, the only types of evidence that have been related consistently to adverse health effects are the presence of current or past water damage, damp materials, visible mold, and mold odor, *not* the number or type of mold spores nor the presence of other markers of mold in indoor air or dust.

2.3.5 Wetlands

A wetlands survey was not conducted at the property as a part of this assessment. However, the subject site is currently the site of large surface water ponds and marshland. As such, the subject site area may be considered marsh or wetlands.

Wetlands occur where the water table is at, near, or above the land surface long enough to promote the formation of hydric soils or to support the growth of hydrophytes, and includes those areas where vegetation is lacking and soil is poorly developed or absent as a result of frequent or drastic fluctuations of surface water levels, wave action, water flow, turbidity, or high concentrations of salt or other substances in the substrate.

The California Environmental Protection Agency and its State Water Resources Control Board (SWRCB) monitor wetlands in the state. The SWRCB, in particular, is responsible for updating the state's wetland inventory resources. The Board also has authority under the Porter-Cologne Water Quality Control Act to regulate the placement of clean fill dirt into state waters. The Department of Parks and Recreation, Department of Fish and Game, and the California Coastal Conservancy preserve wetlands according to provisions in the California Public Resources Code. Wetlands are regulated through a §401 water quality certification process, although The California Coastal Act is the primary statutory scheme regulating activities in coastal wetlands.

The California Environmental Quality Act (CEQA) requires that project proponents study and disclose a project's anticipated water quality and other environmental impacts and specify means to avoid or minimize those impacts. A proponent for any project needing state or local agency approval must comply with CEQA or indicate that its project is exempt from CEQA, pursuant to the exemptions described in CEQA regulations.

3.0 PHYSICAL SITE SETTING

3.1 Geomorphic Description

The subject site is within the Santa Rosa Valley of the Coast Ranges Geomorphic Province, just northwest of the Sacramento-San Joaquin Delta region of the Great Valley Geomorphic Province of California, and at approximately 139-142 feet above mean sea level (msl). The Santa Rosa Valley occupies a northwest-trending structural depression in the southern part of the Coast Ranges of northern California. This depression divides the Mendocino Range on the west from the Mayacamas and Sonoma Mountains on the east. The Santa Rosa Plain Sub Basin is approximately 22 miles long; and 0.2 miles wide at the northern end, approximately 9 miles wide through the Santa Rosa area, and about 6 miles wide at the south end of the valley near the City of Cotati. The Santa Rosa Plain Sub Basin is bounded on the northwest by the Russian River plain, approximately one-mile south of the City of Healdsburg and the Healdsburg sub basin; and mountains of the Mendocino Range flank the remaining western boundary. The southern end of the sub basin is marked by a series of low hills, which form a drainage divide that separates the Santa Rosa Valley from the Petaluma Valley basin south of Cotati. The eastern sub basin boundary is flanked by the Sonoma Mountains south of Santa Rosa and the Mayacamas Mountains north of Santa Rosa. The Rincon Valley sub basin is situated east of the City of Santa Rosa and is separated from the Santa Rosa Plain sub basin by a narrow constriction formed in rocks of the Sonoma Volcanics.

3.2 Geologic Setting

Sonoma County is bisected by the San Andreas Fault. To the west on the tip of Bodega Head are ancient continental rocks formed far to the south and moved north at least 335 miles by the fault. To the east of the fault lies the Franciscan Complex, a system of oceanic rocks mixed by faulting as the ocean floor slid eastward under the edge of the continent. Both areas are covered by a thin mantle of more recent rocks formed in shallow seas, beaches, volcanoes and rivers. Recent sharp uplift and ongoing river erosion has sculpted the region.

Information regarding oil and gas fields was researched at the California Department of Conservations website. Based on the well finder produced by the Division of Oil, Gas, and Geothermal Resources (http://maps.conservation.ca.gov/doggr/), the subject site does not fall within a known oil or gas field. In addition, no oil or gas wells, or plugged and abandoned dry holes were noted on or nearby the subject site. Note: This does not refer to the previous gas holder and gas manufacturing stored and conveyed throughout the western portion of the site.

Information regarding soil lithology was researched at the California Water Resources Control Board's website https://geotracker.waterboards.ca.gov/. Based on previous subsurface investigations performed at the *Private Residence site (located at 3075 Marlow Road, approximately 4500-feet to the southwest of the subject site)*, the subject site is underlain with sandy silt topsoil from 0-3 feet bgs; very moist, gray clayey gravel from 3-5 feet bgs; yellowish brown very moist silt from 5-7 feet bgs; very moist brown gravelly sand from 7-9 feet bgs; yellowish brown very moist sandy silt from 9-11 feet bgs; olive-brown, very moist sandy silty clay from 11-16 feet bgs; brown wet sand from 16-18 feet bgs; olive-brown very moist clayey silt from 18-23 feet bgs; very moist silty clayey sand from 23-26 feet bgs; gray, dry to moist, sandy silty clay from 26-31 feet bgs; olive yellowish brown moist sandy silt from 31-32 feet bgs; wet silty sand from 32-34 feet bgs; and wet gravelly sand from 34-35 feet bgs. Soil boring data was terminated at 35 feet bgs (Edd Clark & Associates, 2004).

3.3 Hydrogeologic Setting

Information regarding first depth to groundwater and flow direction were researched at the California Water Resources Control Board's website at https://gis.water.ca.gov/app/gicima/#bookmark_DepthBelowGroundSurface. The Santa Rosa Plain Sub basin is drained principally by the Santa Rosa and Mark West Creeks that flow westward and collect into the Laguna de Santa Rosa. The Laguna de Santa Rosa flows northward and discharges into the Russian River. The Santa Rosa Plain sub-basin has one main water-bearing unit (Merced Formation) and several units with lower water-bearing capacities (Glen Ellen Formation and Alluvium). The groundwater is not everywhere continuous because many of the units only have lenses of water-bearing material, and the valley is cut by northwest trending

faults.

Locally, topography gently slopes southeasterly towards Santa Rosa Creek, roughly illustrating the direction of the ground water flow direction.

Based on a previous subsurface investigation performed at the *Station 384637N1227767W001 site (located at 38.463700N, 122.776W, approximately 4400-feet to the southwest of the subject site),* ground water in the general area has been encountered at depths of was 45.7 feet bgs (3/13/19). Historically depth to GW at this point has ranged from 33.8 to 63.8 bgs from 1989-2019. Seasonal variations, hillside runoff, aquifer pumping, tidal fluctuations or other factors may influence ground water levels.

4.0 HISTORICAL REVIEW

Site historical information was obtained from a review of Sanborn Fire Insurance Maps, United States Geological Survey (U.S.G.S.) Topographic Maps, aerial photographs, Polk and Haines City Directories. In addition, local building department records were also reviewed. The following Sanborn maps, topographic maps, and city directories were reviewed on March 20, 2019, within the libraries maintained by the University of California in Berkeley, California and City of Santa Rosa, in Santa Rosa, California. The aerial photographs were reviewed online within the sites maintained by National Environmental Title Research, LLC, TerraServer, and Google Earth. In addition, aerial photographs were obtained from Environmental Data Resources, Inc. (EDR).

Note: Copies of supporting aerials, city directories and maps are not typically included in the report. The historical references are reviewed within local public libraries and are copyright protected and cannot be reproduced without the consent of the owner. As such, our reports properly cite and reference the historical reference in accordance with ASTM E1527-13/AAI protocols. Any incorporation of these documents without the permission of the owner would be against the law.

In the Santa Rosa Sanborn Fire Insurance Maps of 1885, 1888, 1893, 1904, 1908, 1950, and 1969, the subject site falls beyond the area of coverage and no site-specific map is available.

In the city directories of 1926, 1947, 1949, 1955 and 1960, neither the subject site address nor Fulton Road are listed (2220 Fulton Road).

According to the Santa Rosa County Assessor Parcel information, the current five (5) bedrooms, one (1) bathroom 1,832 square foot house was built in 1930.

In the topographic maps of 1935 and 1942, the subject site is shown as developed and the southwestern portion with a nondescript structure, and undeveloped on the rest of the site. During this time, surrounding the subject site is a nondescript structure to the north; a small nondescript structure to the south; a nondescript structure to the east; and Fulton Road followed by two nondescript structures to the west.

In the aerial photographs of 1942 and 1952, the subject site appears developed on the southwestern portion with the current residential dwelling, associated sheds, and collected hay bales/grazing land; the eastern portion appears covered with surface ponds at this time. During

this time, bordering the subject site are small structures (likely residential) and associated agricultural orchards to the north; small structures (likely residential) to the south; small structures (likely residential) to the east; and Fulton Road followed by small structures (likely residential) and associated agricultural orchards to the west.

Since at least 1942, the eastern portion of the subject site has been primarily covered in surface ponds as part of the Santa Rosa Plains Wetlands. According to the U.S. Fish and Wildlife Service[1], the Santa Rosa Plain (Plain) is located in central Sonoma County, bordered on the south and west by the Laguna de Santa Rosa, on the east by the foothills, and on the north by the Russian River. The Plain and adjacent areas are characterized by vernal pools, seasonal wetlands, and associated grassland habitat, which support – among other flora and fauna – the threatened California tiger salamander (CTS) and four endangered plant species: Burke's goldfields, Sonoma sunshine, Sebastopol meadowfoam, and many-flowered navarretia (listed plants). These listed plants grow only in seasonal wetlands; the CTS uses seasonal wetlands for breeding, and the surrounding uplands for dispersal, feeding, growth, maturation and maintenance of the juvenile and adult population (upland habitat). The distribution of Burke's goldfields, Sonoma sunshine, and Sebastopol meadowfoam is confined almost entirely to the Plain. Many-flowered navarretia occurs mostly outside the Plain, but its only Sonoma County population is present on the Plain.

Urban and rural growth on the Plain has taken place for over one hundred years, and for the past twenty years urban growth has encroached into areas inhabited by the CTS and the listed plants discussed above. The loss of seasonal wetlands caused by development on the Plain has led to declines in the populations of the listed plants and the CTS. Voters in the cities of Cotati, Rohnert Park, Santa Rosa, and Sebastopol, and the Town of Windsor have established urban growth boundaries (UGBs) for their communities. This is intended to accomplish the goal of city-centered growth, resulting in rural and agricultural land uses being maintained between the urbanized areas. There are also acreages of publicly owned property and preserves located in the Plain, which will further protect against development. Some of the areas within these UGBs, however, include lands inhabited by CTS and the listed plant species. Agricultural practices have

[1] https://www.fws.gov/sacramento/es/Recovery-Planning/Santa-Rosa/Documents/Main_body.pdf

also disturbed seasonal wetlands, CTS and listed plant habitat on the Plain. Some agricultural practices, such as irrigated or grazed pasture, have protected habitat from intensive development.

The Lacustrine, Riverine, and Palustrine systems are represented in the subject area (Santa Rosa Plains). Deepwater habitats include perennial rivers such as Napa River and lakes and reservoirs such as Lake Hennessey and Rector Reservoir. Wetlands include narrow forested and shrub dominated zones on banks and benches along streams; broader floodplain areas that are seasonally flooded and usually dominated by trees; wet meadows; and seeps near the base of hills. Many small wetlands have been created or modified by human activity (e.g., excavation) such as farm ponds and impoundments[2].

In the publication "Press Democrat" dated July 15, 1951, the subject site occupant is reported to have been selling Alfalfa and Hay at 2220 Fulton Road.

In the publication "Press Democrat" dated January 20, 1952, the subject site occupant is reported to have been selling a calf at 2220 Fulton Road.

In the topographic maps of 1954, 1968 and 1980 the subject site is shown as developed and the southwestern portion with a nondescript structure, and undeveloped on the rest of the site. During this time, surrounding the subject site is a nondescript structure and agricultural orchards to the north; a small nondescript structure to the south; a nondescript structure to the east; and Fulton Road followed by two nondescript structures and agricultural orchards to the west.

In the city directories of 1965 and 1970, the subject site address is not listed (2220 Fulton Road). However, Fulton Road is listed.

In the aerial photographs of 1968, 1973, 1983, 1993 and 2006, the subject site appears developed on the southwestern portion with the current residential dwelling and associated sheds; the eastern portion appears covered with surface ponds at this time. During this time, bordering the subject site are small structures (likely residential) to the north; small structures (likely residential) to the south; small structures (likely residential) to the east; and Fulton Road followed by a small structure (likely residential) to the west.

[2] https://www.fws.gov/wetlands/Data/HisMapRep/Santa_Rosa_SE.pdf

In the city directory of 1975, the subject site address is listed as being occupied by private residences, Kane Donald, (2220 Fulton Road).

In the city directories of 1981 and 1985, the subject site address is listed as being occupied by private residences, Kane Donald, and Kane Donald Plumbing (2220 Fulton Road).

In the city directory of 1990, the subject site address is listed as being occupied by private residences (2220 Fulton Road).

In the city directory of 1995, the subject site address is listed as unlisted denoted with "xxxx" (2220 Fulton Road).

In the city directories of 2000, 2006, 2010, 2015 and 2019, the subject site address is listed as being occupied by private residences (2220 Fulton Road).

In the aerial photographs of 2009, 2012, 2016 and 2018, the subject site appears developed on the southwestern portion with the current residential dwelling and associated sheds; the eastern portion appears covered with surface ponds at this time. During this time, bordering the subject site are several small structures (likely residential) and paved roads as part of a newly developed neighborhood and wetlands to the north; several small structures (likely residential) and paved roads as part of a newly developed neighborhood to the south; small structures (likely residential) and undeveloped land to the east; and Fulton Road followed by a small structure (likely residential) to the west.

5.0 ENVIRONMENTAL DATABASE REVIEW

5.1 Agency Record Review

Environmental Data Resources, Inc. (EDR) was contracted to compile data from available government agency databases on locations of actual and potentially impacted sites within a one-mile radius of the subject property. Copies of the environmental database lists and the location map for the subject site are included in Appendix A.

The results of the database search by EDR revealed 7 mapped sites and 0 unmapped sites within a one-mile radius, of which 3 mapped sites are within a one-eighth mile radius of the subject site. Based on distance from the subject property and regional hydrogeology the following selected site(s) identified by EDR were deemed to have the highest potential to impact the subject site. In addition, a Tier 1 Vapor Encroachment Screen (VES) pursuant to ASTM E2600-10 was performed on the following selected site(s) to assess whether a potential vapor encroachment condition (VEC) exists at the subject property caused by the release of vapors from contaminated soil or groundwater either on or near the subject site. These sites identified by EDR were located either at, adjacent or possibly up gradient of the subject site.

- **Jerry Deakins** – 2341 Jaine Lane, Santa Rosa.
  Located several parcels to the north and perceived up/cross gradient.
  Listed on the Haznet list.

  According to the information provided by EDR this site is listed as manifesting other organic solids in 2011 (CAL EPA# CAC002672144). No reports of spills or unauthorized releases were reported for this site by EDR. According to the information provided by the CAL EPA DTSC EnviroStor and RWQCB GeoTracker online databases, this site is not listed as an active or inactive leak case. Based on this information, the probability of a subsurface environmental impact and/or potential vapor encroachment from this site to the subject site is low at this time.

- **Beach Street Builders** – 2323 San Miguel Avenue, Santa Rosa.
  Located several parcels to the south and perceived down/cross gradient. Listed on the Haznet list.

  According to the information provided by EDR this site is listed as manifesting asbestos containing waste in 2016 (CAL EPA# CAC002870674). No reports of spills or unauthorized releases were reported for this site by EDR. According to the information provided by the CAL EPA DTSC EnviroStor and RWQCB GeoTracker online databases, this site is not listed as an active or inactive leak case. Based on this information, the probability of a subsurface environmental impact and/or potential vapor encroachment from this site to the subject site is low at this time.

- **North Bay Classic Restoration** – 2385 San Miguel Avenue, Santa Rosa.
  Located several parcels to the south and perceived down/cross gradient. Listed on the Haznet list.

  According to the information provided by EDR this site is listed as manifesting Oxygenated solvents (acetone, butanol, ethyl acetate, etc.) from 2000-2001 (CAL EPA# CAL000182413). No reports of spills or unauthorized releases were reported for this site by EDR. According to the information provided by the CAL EPA DTSC EnviroStor and RWQCB GeoTracker online databases, this site is not listed as an active or inactive leak case. Based on this information, the probability of a subsurface environmental impact and/or potential vapor encroachment from this site to the subject site is low at this time.

5.2 Local Agency File Review

On December 17, 2018, a Basics representative contacted the California EPA - Department of Toxic Substance Control (CAL EPA DTSC) in Berkeley, California, in regards to any information concerning the subject site.

- **2220 Fulton Road, Santa Rosa**
  The subject site.

  No information regarding the subject site was available within the CAL EPA DTSC files or Regulated Site Portal online database. No information regarding hazardous materials, underground storage tanks or unauthorized releases was available for the subject site.

On December 17, 2018, a Basics representative contacted the Regional Water Quality Control Board (RWQCB) in Santa Rosa, California, in regards to any information concerning the subject site.

- **2220 Fulton Road, Santa Rosa**
  The subject site.

  No information regarding the subject site was available within the RWQCB files or GeoTracker online database. No information regarding hazardous materials, underground storage tanks or unauthorized releases was available for the subject site.

On December 17, 2018, a Basics representative contacted the Bay Area Air Quality Management District (BAAQMD) in San Francisco, California, in regards to any information concerning the subject site.

- **2220 Fulton Road, Santa Rosa**
  The subject site.

  No information regarding the subject site was available within the BAAQMD files. No information regarding hazardous materials, underground storage tanks or unauthorized releases was available for the subject site.

On December 17, 2018, a Basics representative contacted the Sonoma County Department of Environmental Health (SCDEH) in Santa Rosa, California, in regards to any information concerning the subject site:

- **2220 Fulton Road, Santa Rosa**
  The subject site.

  No information regarding the subject site was available within the SCDEH files. No information regarding hazardous materials, underground storage tanks or unauthorized releases was available for the subject site.

On December 17, 2018, a Basics representative contacted the City of Santa Rosa Fire Department – Hazardous Materials Division (SRFD) in Santa Rosa, California, in regards to any information concerning the subject site:

- **2220 Fulton Road, Santa Rosa**
  The subject site.

  No information regarding the subject site was available within the SRFD files. No information regarding hazardous materials, underground storage tanks or unauthorized releases was available for the subject site.

On March 20, 2019, a Basics representative reviewed the following files maintained by the Santa Rosa Building Department (SRBD) in Santa Rosa, California and online files maintained by the County of Sonoma , in regards to any information concerning the subject site:

- **2220 Fulton Road, Santa Rosa**
  The subject site.

  According to the information provided by the SRBD, the following files were available for the subject site:

  2220 Fulton Road

  On August 21, 2001, a planning file log was opened for a neighborhood meeting outlining the planned developments of the "Woodbridge" and "North Village" residential developments.

  On April 21, 2004, a building permit was issued by the county to re-roof the residential dwelling.

  On January 25, 2005, the subject site was annexed by the City of Santa Rosa.

  On August 28, 2006, a code enforcement log was completed stating that a neighbor was cutting the eucalyptus tree without the benefit of a permit.

  On October 29, 2017, a post disaster assessment was conducted of the residential building to assess impacts of the 2017 Tubbs-Adobe fire.

  No information regarding hazardous materials, underground storage tanks or unauthorized releases was available for the subject site.

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 Conclusions

These conclusions are based on the data collected during performance of this ESA and are therefore subject to the time limitations associated with accessing governmental and site data. The purpose of this assessment was to evaluate the likelihood of soil and ground water degradation as a result of the use, storage, treatment, and/or disposal of hazardous materials/waste on the subject site and sites located within a one-mile radius. Findings are based on a geological and hydrogeological information study, and an evaluation of historical and present property use (historical resource review, regulatory agency database and file review, personal interviews and site reconnaissance study).

6.1.1 Data Gaps

A data gap is the failure to obtain information required by the standard despite good faith efforts by the environmental professional to gather the information. During the course of this assessment the following data gaps were identified:

(1) According to the Santa Rosa County Assessor Parcel information, the current five (5) bedrooms, one (1) bathroom 1,832 square foot house was built in 1930.

No other information regarding the subject site prior to 1951 was obtained and the specific use could not be determined within this scope of work and is deemed a data gap. However, it appears the site was utilized as residential. This data gap does not appear to be significant.

Based on the findings of our investigation, it is our opinion that this data gap is considered “not significant” at this time. If additional information is uncovered that significantly changes the conclusion of this report an addendum will be issued. Because ultimately it remains the user who accepts the liability for having entered into a chain of title, it remains important that the user recognize that if information is later uncovered that fills this data gap, our opinion regarding the presence of obvious recognized environmental conditions on site may or may not change.

6.1.2 Environmental Issues/*De Minimis* Conditions

De Minimis Condition are defined by the ASTM Standard Practice E1527-13 as condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. On the basis of the information compiled and reviewed by Basics, our findings indicate the following *de minimis* conditions:

(1) In 1930, the five (5) bedroom, one (1) bathroom, 1,832-square residential dwelling with associated sheds was developed along the southwest portion of the subject site (2220 Fulton Road). Prior to this the site was shown as undeveloped. Additionally, since 1942 the eastern portion of the subject site has appeared as wetlands.

Based on the historical references reviewed, the subject site has been listed as being occupied by agricultural grazing (Early 1950s), private residences (1950-Present), Kane and Donald Plumbing (Early 1980s).

Agricultural Grazing Operations (Early 1950s)

In the 1950s, the subject site and immediate surrounding areas are shown as agricultural grazing land.

In the publication "Press Democrat" dated July 15, 1951, the subject site occupant is reported to have been selling Alfalfa and Hay at 2220 Fulton Road.

In the publication "Press Democrat" dated January 20, 1952, the subject site occupant is reported to have been selling a calf at 2220 Fulton Road.

By the mid 1960s, the agricultural row crops were no longer shown.

The prior use as agricultural land may have a high potential environmental risk due to the potential use of pesticides and associated farm equipment. Such chemicals are notable because they may be organophosphate sources. Information from the County Agricultural Department revealed these chemicals do not persist in the soil and ground water and will break down over time. In addition, the site area is not known for subsurface impacts from pesticides or herbicides.

Generally, sampling of soil, sediment in drainage ditches, and/or groundwater should occur at former agricultural sites if any of the following applies:

- Persistent pesticides were or are likely to have been used.
- Pesticides were or are likely to have been stored, mixed, or disposed of on the property, or pesticide-application equipment was cleaned there.
- There are known or suspected spills or accumulations of pesticides.
- Pesticides are present in groundwater or there is reason to believe they may be present in groundwater.
- The site has ever had intensive management for orchard, nursery, or other high-value crops, including significant use of pesticides and irrigation.

However, no information regarding the use of hazardous materials was uncovered during this time frame within the scope of work performed. As such, it does not appear that pesticides were stored, mixed, or disposed of onsite. In addition, it did not appear that underground or aboveground fuel tanks, equipment storage, repair, or maintenance was located onsite. Due to the passage of approximately 50+ years since the subject site was utilized as agricultural land, the probability of pesticides or herbicides within the soil or ground water is low.

Federally Protected Wetlands (Early 1940s-Present)

Since at least 1942, the eastern portion of the subject site has been primarily covered in surface ponds as part of the Santa Rosa Plains Wetlands. According to the U.S. Fish and Wildlife Service[3], the Santa Rosa Plain (Plain) is located in central Sonoma County, bordered on the south and west by the Laguna de Santa Rosa, on the east by the foothills, and on the north by the Russian River. The Plain and adjacent areas are characterized by vernal pools, seasonal wetlands, and associated grassland habitat, which support – among other flora and fauna – the threatened California tiger salamander (CTS) and four endangered plant species: Burke's goldfields, Sonoma sunshine, Sebastopol meadowfoam, and many-flowered navarretia (listed plants). These listed plants grow only in seasonal wetlands; the CTS uses seasonal wetlands for breeding, and the surrounding uplands for dispersal, feeding, growth, maturation and maintenance of the juvenile and adult population (upland habitat).

Urban and rural growth on the Plain has taken place for over one hundred years, and for the past twenty years urban growth has encroached into areas inhabited by the CTS and the listed plants discussed above. The loss of seasonal wetlands caused by development on the Plain has led to declines in the populations of the listed plants and the CTS. Agricultural practices have also disturbed seasonal wetlands, CTS and listed plant habitat on the Plain. Some agricultural practices, such as irrigated or grazed pasture, have protected habitat from intensive development. The Lacustrine, Riverine, and Palustrine systems are represented in the subject area (Santa Rosa Plains). Deepwater habitats include perennial rivers such as Napa River and lakes and reservoirs such as Lake Hennessey and Rector Reservoir. Wetlands include narrow forested and shrub dominated

[3] https://www.fws.gov/sacramento/es/Recovery-Planning/Santa-Rosa/Documents/Main_body.pdf

zones on banks and benches along streams; broader floodplain areas that are seasonally flooded and usually dominated by trees; wet meadows; and seeps near the base of hills. Many small wetlands have been created or modified by human activity (e.g., excavation) such as farm ponds and impoundments[4].

A wetlands survey was not conducted at the property as a part of this assessment. However, the subject site is currently the site of large ponds and marshland. As such, the subject site area may be considered marsh or wetlands.

Wetlands occur where the water table is at, near, or above the land surface long enough to promote the formation of hydric soils or to support the growth of hydrophytes, and includes those areas where vegetation is lacking and soil is poorly developed or absent as a result of frequent or drastic fluctuations of surface water levels, wave action, water flow, turbidity, or high concentrations of salt or other substances in the substrate.

The California Environmental Protection Agency and its State Water Resources Control Board (SWRCB) monitor wetlands in the state. The SWRCB, in particular, is responsible for updating the state's wetland inventory resources. The Board also has authority under the Porter-Cologne Water Quality Control Act to regulate the placement of clean fill dirt into state waters. The Department of Parks and Recreation, Department of Fish and Game, and the California Coastal Conservancy preserve wetlands according to provisions in the California Public Resources Code. Wetlands are regulated through a §401 water quality certification process, although The California Coastal Act is the primary statutory scheme regulating activities in coastal wetlands.

The California Environmental Quality Act (CEQA) requires that project proponents study and disclose a project's anticipated water quality and other environmental impacts and specify means to avoid or minimize those impacts. A proponent for any project needing state or local agency approval must comply with CEQA or indicate that its project is exempt from CEQA, pursuant to the exemptions described in CEQA regulations.

During Basics' site reconnaissance, the subject site facilities were noted as relatively clean with no obvious indications of stains or spills from the use of hazardous materials. In addition, no obvious evidence of collection drains, sumps, underground tanks, underground hydraulic hoists or other conduits to the subsurface within subject site facilities were noted during the site visit, which would suggest a high potential discharge of hazardous materials to the subsurface. In addition, no compelling evidence was discovered that a hazardous substance has been released from its operation onto (or into) the surface.

[4] https://www.fws.gov/wetlands/Data/HisMapRep/Santa_Rosa_SE.pdf

Because ultimately it remains the user who accepts the liability for having entered into a chain of title, it remains important that the user recognize that the “risk tolerance” of a regulatory agency could change, as could be the case if information is later uncovered to suggest that the de minimis conditions (i.e., those that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies) are of greater significance than once thought.

Based on the de minimis conditions stated above, additional scope of services (i.e. baseline environmental sampling), but not limited to, may or may not disclose information which may significantly reduce the “risk tolerance” in connection with the acquisition of a parcel of commercial real estate.

6.1.3 Recognized Environmental Conditions (RECs)

Recognized Environmental Conditions (RECs) are defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. Based on the findings of our investigation, it is our opinion that there are no apparent obvious RECs on site that warrant further investigation or documentation at this time.

6.1.4 Controlled Recognized Environmental Conditions (CRECs)

Controlled Recognized Environmental Conditions (CRECs) are defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. Based on the findings of our investigation, no apparent CRECs were identified onsite.

6.1.5 Historical Recognized Environmental Conditions (HRECs)

Historical Recognized Environmental Condition (HRECs) are defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. Based on the findings of our investigation, no apparent HRECs were identified onsite.

6.1.6 Recommendations

This assessment has revealed **no** obvious evidence of recognized environmental conditions in connection with the property that warrants further investigation and/or documentation at this time.

Executive Summary

The proposed 2220 Fulton Road project would result in construction of 120 single-family homes. The project's anticipated trip generation includes 1,124 daily trips on average during a weekday, with 88 trips during the a.m. peak hour and 118 during the p.m. peak hour with deductions from the existing single-family home taken into account.

The study area was established by the City and includes nine intersections surrounding the project site. The collision histories of the nine study intersections were reviewed, and all were determined to be operating with below-average crash rates compared to similar facilities statewide, indicating that there is not a readily apparent safety issue at any of the nine locations. Analysis indicates that the nine study intersections are operating acceptably under Existing conditions both without and with project traffic added. All intersections would be expected to continue operating at LOS D or better overall with project traffic added, though side-street approaches currently operating at LOS E or F would be expected to continue doing so. Because the arterial corridors would continue to operate at high service levels, the project's impact is considered less-than-significant.

For the Baseline scenario, anticipated volumes from approved projects in the vicinity of the proposed project were added to the roadway network. Under the Baseline plus Project scenario the study intersections are expected to operate acceptably overall. The additional delay due to project-added trips would again be expected to have a less-than-significant impact, with all intersections expected to continue operating at LOS D or better overall, though some side-street movements are operating at LOS E or F, and these conditions would be expected to continue.

In the future, the City plans to convert Piner Road/Waltzer Road to a signalized intersection. Because this is a planned future improvement, it is assumed that this signalization project is included in the City's "Public Facilities Fee" (PFF), so payment of the fee as part of the approval process would provide the project's contribution to the cost of the signal project.

Vehicles would access the project via a New Project Street connecting to Fulton Road. Sight distances at the proposed location for the New Project Street would be adequate for both entering and exiting drivers if clear lines of sight are maintained through avoidance of installing signs or landscaping in the vision area. The is a two-way-left-turn lane on Fulton Road at the New Project Street; it is recommended that the striping be modified to provide a dedicated southbound left-turn lane at the New Project Street. A traffic signal is not warranted at Fulton Road/New Project Street under volumes for either Existing or Baseline plus Project scenarios during either peak hour. The project would also make a roadway connection between Tedeschi Street and Orleans Street using Andre Lane. Access for emergency response vehicles is expected to be adequate.

The project site is generally served by adequate facilities for alternative modes. Sidewalks would be provided along all new project streets as well as along frontages of existing streets where new connections are to be made. The site would be served by bike lanes along Fulton Road and Piner Road. There are, however, no transit lines within an acceptable walking distance of the project site, so it is recommended that the applicant contact Santa Rosa CityBus to request that consideration be given to extending a route into the adjacent neighborhood to better serve the project site and nearby residential neighborhoods.

Introduction

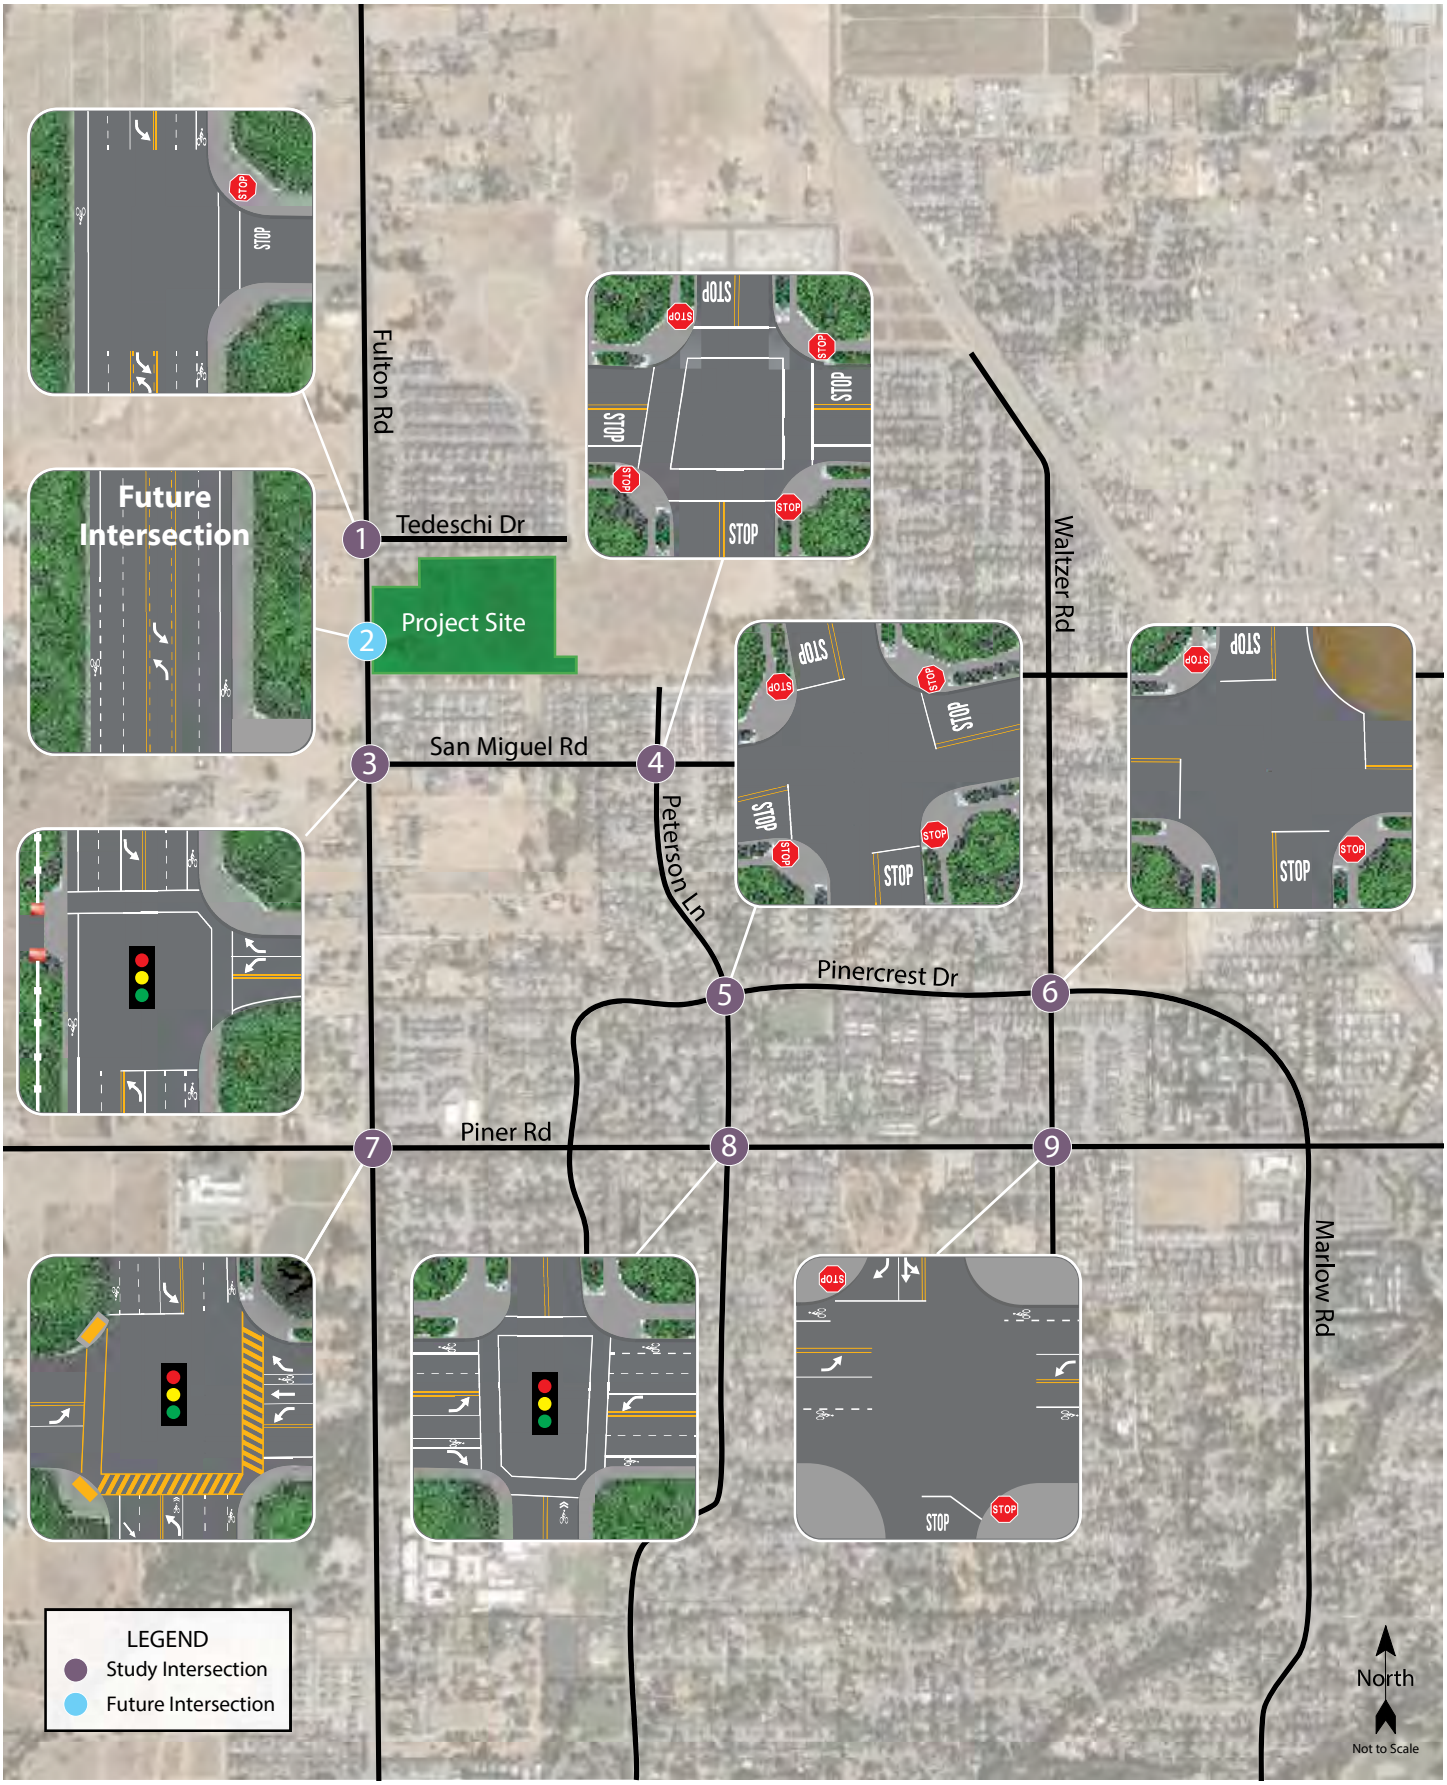
This report presents an analysis of the potential traffic impacts that would be associated with the proposed development of 120 single-family homes at 2220 Fulton Road in the City of Santa Rosa. The traffic study was completed in accordance with the criteria established by the City of Santa Rosa that reflects a scope of work reviewed and approved by City Staff and is consistent with standard traffic engineering techniques.

Prelude

The purpose of a traffic impact study is to provide City staff and policy makers with data they can use to make an informed decision regarding the potential traffic impacts of a proposed project, and any associated improvements that would be required to mitigate these impacts to a level of insignificance as defined by the City's General Plan or other policies. Vehicular traffic impacts are typically evaluated by determining the number of new trips that the proposed use would be expected to generate, distributing these trips to the surrounding street system based on existing travel patterns or anticipated travel patterns specific to the proposed project, then analyzing the impact the new traffic would be expected to have on critical intersections or roadway segments. Impacts relative to access for pedestrians, bicyclists, and to transit are also addressed.

Project Profile

The project as proposed includes construction of 120 detached single-family homes on a site that currently has one single-family dwelling and which will be accessed from Fulton Road via a new road, and a proposed road connection between Andre Lane and Orleans Street which would connect the project to San Miguel Avenue and Tedeschi Drive. The project site is located at 2220 Fulton Road, as shown in Figure 1.



sro497.ai 6/19

Traffic Impact Study for the 2220 Fulton Road Project

Figure 1 – Study Area and Existing Lane Configurations

W-Trans

Transportation Setting

Operational Analysis

Study Area and Periods

The study area consists of the following intersections:

1. Fulton Road/Tedeschi Drive
2. Fulton Road/New Project Street
3. Fulton Road/San Miguel Road
4. Peterson Lane/San Miguel Road
5. Peterson Lane/Pinercrest Drive
6. Waltzer Road/Pinercrest Drive
7. Fulton Road/Piner Road
8. Peterson Lane/Piner Road
9. Waltzer Road/Piner Road

Operating conditions during the a.m. and p.m. peak periods were evaluated to capture the highest potential impacts for the proposed project as well as the highest volumes on the local transportation network. The morning peak hour occurs between 7:00 and 9:00 a.m. and reflects conditions during the home to work or school commute, while the p.m. peak hour occurs between 4:00 and 6:00 p.m. and typically reflects the highest level of congestion during the homeward bound commute.

Study Intersections

Fulton Road/Tedeschi Drive is a stop-controlled tee-intersection, with a stop control at the westbound Tedeschi Drive approach. There are bicycle lanes along Fulton Road and a crosswalk on the east leg.

Fulton Road/New Project Street would be a new intersection constructed with the proposed project approximately 0.10 mile north of Fulton Road/San Miguel Road. As proposed, the New Project Street would form the eastern leg of the intersection. There are bicycle lanes along Fulton Road at the new project street.

Fulton Road/San Miguel Road is a signalized four-legged intersection with protected left-turn phasing on the northbound, southbound, and westbound approaches. It should be noted that the west leg is a driveway to a single-family dwelling. Crosswalks and associated pedestrian signal heads are present on the north and east legs.

Peterson Lane/San Miguel Road is an all-way stop-controlled four-legged intersection. Crosswalks and curb ramps are present on all legs of the intersection.

Peterson Lane/Pinercrest Drive is a four-legged all-way stop-controlled intersection. While curb ramps are present on all four curbs, there are no associated crosswalks on any leg of the intersection.

Waltzer Road/Pinercrest Drive is an all-way stop-controlled four-legged intersection. Curb ramps are present on three of the four curbs, with no associated crosswalks on any of the legs.

Fulton Road/Piner Road is a signalized four-legged intersection, with protected left-turn phasing on all four approaches. Crosswalks, as well as associated pedestrian signal heads and phasing, are present on the south, east, and west legs of the intersection. Bicycle lanes exist along Fulton Road and along Piner Road east of the intersection.

Peterson Lane/Piner Road is a four-legged, signalized intersection. Left-turn protected-permitted phasing is present on the eastbound and westbound approaches of Piner Road. Bicycle lanes exist along Piner Road, and crosswalks are present on all four legs with associated pedestrian signal phasing.

Waltzer Road/Piner Road is a four-legged, two-way stop-controlled intersection with stop controls at the northbound and southbound Waltzer Road approaches. Bicycle lanes exist along Piner Road, and there are curb ramps at all four legs but no associated crosswalks.

The locations of the study intersections and the existing lane configurations and controls are shown in Figure 1.

Collision History

The collision history for the study area was reviewed to determine any trends or patterns that may indicate a safety issue. Collision rates were calculated based on records available from the California Highway Patrol as published in their Statewide Integrated Traffic Records System (SWITRS) reports. The most current five-year period available is October 1, 2013 through September 30, 2018.

Calculated collision rates for the study intersections were compared to average collision rates for similar facilities statewide, as indicated in *2014 Collision Data on California State Highways*, California Department of Transportation (Caltrans). The average collision rates for intersections differ based on whether the intersection is controlled by a traffic signal, all-way stop signs, or is uncontrolled, as well as the number of approaches (three or four).

As presented in Table 1, all nine intersections had lower collision rates than the statewide averages within the most recent five-year period. The collision rate calculation output is provided in Appendix A.

Table 1 – Collision Rates at the Study Intersections

Study Intersection	Number of Collisions (2013-2018)	Calculated Collision Rate (c/mve)	Statewide Average Collision Rate (c/mve)
1. Fulton Rd/Tedeschi Dr	2	0.05	0.14
3. Fulton Rd/San Miguel Rd	4	0.12	0.43
4. Peterson Ln/San Miguel Rd	0	0.00	0.14
5. Peterson Ln/Pinercrest Dr	1	0.23	0.32
6. Waltzer Rd/Pinercrest Dr	0	0.00	0.32
7. Fulton Rd/Piner Rd	9	0.19	0.43
8. Peterson Ln/Piner Rd	7	0.25	0.43
9. Waltzer Rd/Piner Rd	3	0.11	0.26

Note: c/mve = collisions per million vehicles entering

Alternative Modes

Pedestrian Facilities

Pedestrian facilities include sidewalks, crosswalks, pedestrian signal phases, curb ramps, curb extensions, and various streetscape amenities such as lighting, benches, etc. In general, a network of sidewalks, crosswalks, and curb ramps provide access for pedestrians in the residential areas near the proposed project site. Currently there are sidewalks along Fulton Road and plans for a connected sidewalk network throughout the project site.

Bicycle Facilities

The *Highway Design Manual*, Caltrans, 2017, classifies bikeways into four categories:

- **Class I Multi-Use Path** – a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross flows of motorized traffic minimized.
- **Class II Bike Lane** – a striped and signed lane for one-way bike travel on a street or highway.
- **Class III Bike Route** – signing only for shared use with motor vehicles within the same travel lane on a street or highway.
- **Class IV Bikeway** – also known as a separated bikeway, a Class IV Bikeway is for the exclusive use of bicycles and includes a separation between the bikeway and the motor vehicle traffic lane. The separation may include, but is not limited to, grade separation, flexible posts, inflexible physical barriers, or on-street parking.

Fronting the proposed project, Class II bike lanes exist on Fulton Road between the Santa Rosa North City Limits and Sebastopol Road. There are also existing Class II bicycle lanes on Piner Road between Fulton Road and Marlow Road. According to the *City of Santa Rosa Bicycle & Pedestrian Master Plan Update 2018,* a trail is planned behind the proposed project site. Bicyclists ride in the roadway and/or on sidewalks along all other streets within the project study area. Table 2 summarizes the existing and planned bicycle facilities in the project vicinity, as contained in the *City of Santa Rosa Bicycle & Pedestrian Master Plan Update 2018*.

Table 2 – Bicycle Facility Summary

Status Facility	Class	Length (miles)	Begin Point	End Point
Existing				
Fulton Rd	II	3.95	City Limits North	Sebastopol Rd
Piner Rd	II	1.00	Fulton Rd	Marlow Rd
Planned				
Trail	I	0.44	Village Dr	Orleans St
San Miguel Ave	II	0.50	Fulton Rd	Francisco Ave
Francisco Ave	II	1.00	City Limits North	San Miguel Ave

Source: *City of Santa Rosa Bicycle & Pedestrian Master Plan Update 2018*, City of Santa Rosa, 2018

Transit Facilities

There are no public transit service or facilities within one-quarter mile of the project site. The nearest transit service stop is located south of Fulton Road/Piner Road, approximately 0.8 mile from the proposed project site, and it is served by the Santa Rosa City Bus Route 6.

Capacity Analysis

Intersection Level of Service Methodologies

Level of Service (LOS) is used to rank traffic operation on various types of facilities based on traffic volumes and roadway capacity using a series of letter designations ranging from A to F. Generally, Level of Service A represents free flow conditions and Level of Service F represents forced flow or breakdown conditions. A unit of measure that indicates a level of delay generally accompanies the LOS designation.

The study intersections were analyzed using methodologies published in the *Highway Capacity Manual* (HCM), Transportation Research Board, 2010. This source contains methodologies for various types of intersection control, all of which are related to a measurement of delay in average number of seconds per vehicle.

The Levels of Service for the intersections with side street stop controls, or those which are unsignalized and have one or two approaches stop controlled, were analyzed using the "Two-Way Stop-Controlled" intersection capacity method from the HCM. This methodology determines a level of service for each minor turning movement by estimating the level of average delay in seconds per vehicle. Results are presented for individual movements together with the weighted overall average delay for the intersection.

The study intersections with stop signs on all approaches were analyzed using the "All-Way Stop-Controlled" Intersection methodology from the HCM. This methodology evaluates delay for each approach based on turning movements, opposing and conflicting traffic volumes, and the number of lanes. Average vehicle delay is computed for the intersection as a whole and then related to a Level of Service.

The study intersections that are currently controlled by a traffic signal, or may be in the future, were evaluated using the signalized methodology from the HCM. This methodology is based on factors including traffic volumes, green time for each movement, phasing, whether the signals are coordinated or not, truck traffic, and pedestrian activity. Average stopped delay per vehicle in seconds is used as the basis for evaluation in this LOS methodology. For purposes of this study, delays were calculated using signal timing obtained from the City of Santa Rosa.

The ranges of delay associated with the various levels of service are indicated in Table 3.

Table 3 – Intersection Level of Service Criteria			
LOS	**Two-Way Stop-Controlled**	**All-Way Stop-Controlled**	**Signalized**
A	Delay of 0 to 10 seconds. Gaps in traffic are readily available for drivers exiting the minor street.	Delay of 0 to 10 seconds. Upon stopping, drivers are immediately able to proceed.	Delay of 0 to 10 seconds. Most vehicles arrive during the green phase, so do not stop at all.
B	Delay of 10 to 15 seconds. Gaps in traffic are somewhat less readily available than with LOS A, but no queuing occurs on the minor street.	Delay of 10 to 15 seconds. Drivers may wait for one or two vehicles to clear the intersection before proceeding from a stop.	Delay of 10 to 20 seconds. More vehicles stop than with LOS A, but many drivers still do not have to stop.
C	Delay of 15 to 25 seconds. Acceptable gaps in traffic are less frequent, and drivers may approach while another vehicle is already waiting to exit the side street.	Delay of 15 to 25 seconds. Drivers will enter a queue of one or two vehicles on the same approach, and wait for vehicle to clear from one or more approaches prior to entering the intersection.	Delay of 20 to 35 seconds. The number of vehicles stopping is significant, although many still pass through without stopping.
D	Delay of 25 to 35 seconds. There are fewer acceptable gaps in traffic, and drivers may enter a queue of one or two vehicles on the side street.	Delay of 25 to 35 seconds. Queues of more than two vehicles are encountered on one or more approaches.	Delay of 35 to 55 seconds. The influence of congestion is noticeable, and most vehicles have to stop.
E	Delay of 35 to 50 seconds. Few acceptable gaps in traffic are available, and longer queues may form on the side street.	Delay of 35 to 50 seconds. Longer queues are encountered on more than one approach to the intersection.	Delay of 55 to 80 seconds. Most, if not all, vehicles must stop and drivers consider the delay excessive.
F	Delay of more than 50 seconds. Drivers may wait for long periods before there is an acceptable gap in traffic for exiting the side streets, creating long queues.	Delay of more than 50 seconds. Drivers enter long queues on all approaches.	Delay of more than 80 seconds. Vehicles may wait through more than one cycle to clear the intersection.

Reference: *Highway Capacity Manual,* Transportation Research Board, 2010

Traffic Operation Standards

City of Santa Rosa

The City of Santa Rosa's adopted Level of Service (LOS) Standard is contained in *Santa Rosa General Plan 2035*. Standard TD-1 states that the City will try to maintain a Level of Service (LOS) D or better along all major corridors. Exceptions to meeting this standard are allowed where attainment would result in significant environmental degradation; where topography or environmental impacts make the improvement impossible; or where attainment would ensure loss of an area's unique character.

While a corridor level of service is applied by the City in its analysis of the entire City as part of the environmental documentation supporting the General Plan, this type of analysis only provides relevant data when performed on a much longer segment than the ones included as the study area for the project. Therefore, although the City's standard does not specify criteria for intersections, for the purposes of this study, as is standard practice for such studies, a minimum operation of LOS D for the overall operation of signalized intersections was applied.

Because delay on a stop-controlled side-street does not impact operation of the through corridor on which the City's service level standard is based, delay indicative of LOS E or F on a side-street approach was considered acceptable as long as the average for the intersection as a whole is LOS D or better.

Existing Conditions

The Existing Conditions scenario provides an evaluation of current operation based on existing traffic volumes during the a.m. and p.m. peak periods. This condition does not include project-generated traffic volumes. Volume data was provided by the City of Santa Rosa for the intersections of Fulton Road/San Miguel Road, Peterson Lane/Piner Road, Fulton Road/Piner Road, and the segment of Fulton Road between the City Limits and San Miguel Road. Since these intersections and the segment were taken between 2017 and 2018, a yearly growth rate for each intersection was calculated and applied to the turning movement volumes.

Volumes were collected on April 30, 2019, while local schools were in session, for the remaining intersections. Because current traffic volumes are substantially lower due to the loss of homes and businesses in the area during the firestorm of October 2017, a growth factor of 1.33 was applied to volumes for both peak hours to account for the anticipated traffic that would return as the area is rebuilt. Because traffic volumes for Fulton Road/Piner Road and Peterson Lane/Piner Road were taken before the firestorm, the firestorm-related growth factor was not applied to these two intersections.

Intersection Levels of Service

Under existing conditions, all study intersections are operating acceptably overall at LOS C or better. A summary of the intersection level of service calculations is contained in Table 4, and copies of the Level of Service calculations are provided in Appendix B. The existing traffic volumes are shown in Figure 2.

Table 4 – Existing Peak Hour Intersection Levels of Service

sro497.ai 6/19

Traffic Impact Study for the 2220 Fulton Road Project

Figure 2 – Existing Traffic Volumes

W-Trans

Baseline Conditions

The Baseline Conditions scenario provides an evaluation of operation with traffic added from approved or pending projects in the study area that could be operational within the next two to three years. At the request of City staff, the following three approved projects were included in the Baseline Conditions analysis:

- Kerry Ranch (Phases 1-3) – 95 detached single-family dwelling units at 2181 Francisco Avenue.
- Francisco Village – 77 single family dwelling unit development at 2601 Francisco Avenue.
- North Village II – 164 multi-family dwelling units at 2406 Fulton Road (based on original traffic study from 2002). For the purposes of the study, while the development is listed as including 116 multi-family dwelling units on the City of Santa Rosa's *Citywide Summary of Pending Development*, the original buildout of 164 units was conservatively used to match the trip generation from the project's traffic study.

The trip generation rates assumed in the traffic studies for the three approved projects were used for the Baseline scenario; it is noted that they differ slightly from the 10th Edition rates as the reports were written before the newest edition was published.

Under estimated Baseline volumes the study intersections would be expected to continue operating at the same levels of service as under existing volumes except for Peterson Lane/Piner Road, which would be anticipated to continue operating acceptably but experience a change in service level during the morning peak hour from LOS A to LOS B. These results are summarized in Table 5, and Baseline volumes are shown in Figure 3.

Table 5 – Baseline Peak Hour Intersection Levels of Service

Study Intersection ***Approach***	AM Peak		PM Peak	
	Delay	**LOS**	**Delay**	**LOS**

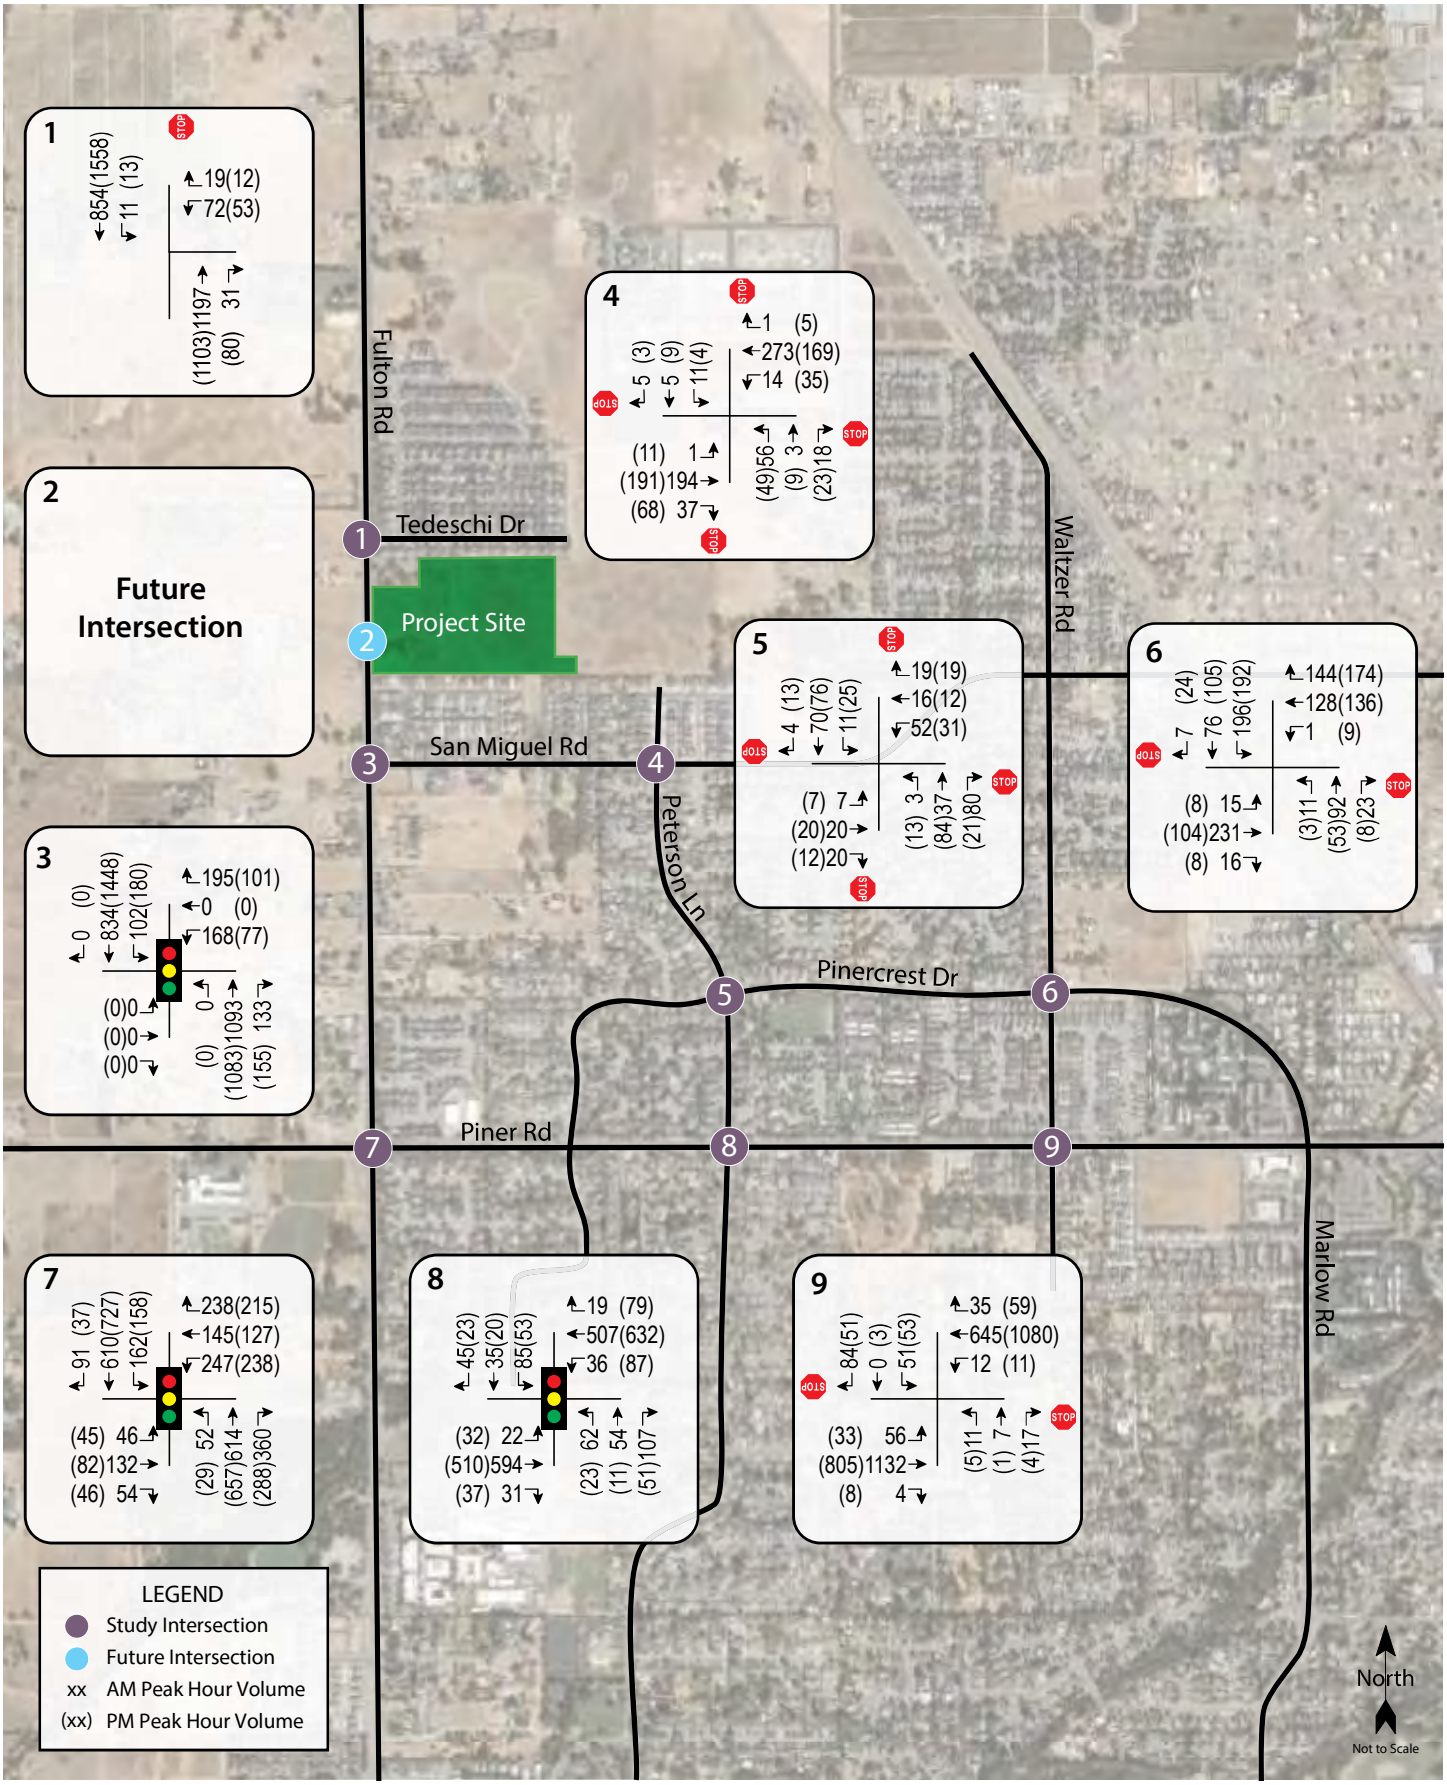
9. Waltzer Rd/Piner Rd	12.9	B	12.3	A
Northbound (Waltzer Rd) Approach	*86.4*	*F*	*85.1*	*F*
Southbound (Waltzer Rd) Approach	**	*F*	**	*F*

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics;* **= delay greater than 120 seconds

Future (Cumulative) Conditions

A future conditions scenario was considered for evaluation for the project's impact on the surrounding network with future planned development. The City of Santa Rosa is in the process of updating the transportation element for the General Plan, as well as their Traffic Impact Study Guidelines. Since the proposed project is consistent with its zoning and General Plan land use designation, its traffic would be included in volumes projected for analysis of



sro497.ai 6/19

Traffic Impact Study for the 2220 Fulton Road Project

Figure 3 – Baseline Traffic Volumes

W-Trans

the General Plan, so analysis of a future scenario is not necessary under the policies contained in the draft traffic study guidelines. It is noted that at the discretion of the Public Works staff such a scenario could be requested, though one was not for this project.

Project Description

The project as proposed would entail constructing 120 single-family homes on a lot currently occupied by a single home and located north of San Miguel Avenue and east of Fulton Road. The project would be accessed by a new street connecting to Fulton Road and another between Orleans Street and Andre Lane connecting the site to San Miguel Road and Tedeschi Drive. Neighborhoods off Andre Lane would benefit from the road connection south, providing a more direct route south of the neighborhood and the option of traveling south along Fulton via the signalized intersection at Fulton Road/San Miguel Road instead of waiting to turn left at Fulton Road/Tedeschi Drive. The proposed project site plan is shown in Figure 4.

Trip Generation

The anticipated trip generations for the proposed project as well as the existing home were estimated using standard rates published by the Institute of Transportation Engineers (ITE) in *Trip Generation Manual*, 10th Edition, 2017 for "Single Family Detached Housing" (ITE LU 210). As shown in Table 6, the proposed project is expected to generate an average of 1,133 trips per day, including 89 trips during the a.m. peak hour and 119 during the p.m. peak hour. After deductions are taken into account for the home to be removed, the project would be expected to generate 1,124 new trips on a daily basis, including 88 during the morning peak hour and 118 during the evening peak hour; these new trips represent the increase in traffic associated with the project compared to existing volumes.

Table 6 – Trip Generation Summary

Land Use	Units	Daily		AM Peak Hour				PM Peak Hour			
		Rate	Trips	Rate	Trips	In	Out	Rate	Trips	In	Out
Existing											
Single Family Detached Housing	-1 du	9.44	-9	0.74	-1	0	-1	0.99	-1	-1	0
Proposed											
Single Family Detached Housing	120 du	9.44	1,133	0.74	89	22	67	0.99	119	75	44
Total (net new trips)			**1,124**		**88**	**22**	**66**		**118**	**74**	**44**

Note: du = dwelling unit

Trip Distribution

The pattern used to allocate new project trips to the street network was based on data from the 2000 Census for home-to-work trips. It should be noted that of the five percent of trips anticipated to travel to and from the north via Fulton Road, one percent of the trips were allocated to travel via Andre Lane to the intersection of Fulton Road/Tedeschi Drive to account for the 25 units (approximately 20 percent of the total proposed dwelling units) on the northern section of the proposed project site that might use this route rather than directly onto Fulton Road via the New Project Street. It was conservatively assumed all the project trips going south on Fulton Road would use the New Project Street, resulting in the maximum potential for improvements to be warranted at this location. The applied distribution assumptions and resulting trips are shown in Figure 5 and Table 7.

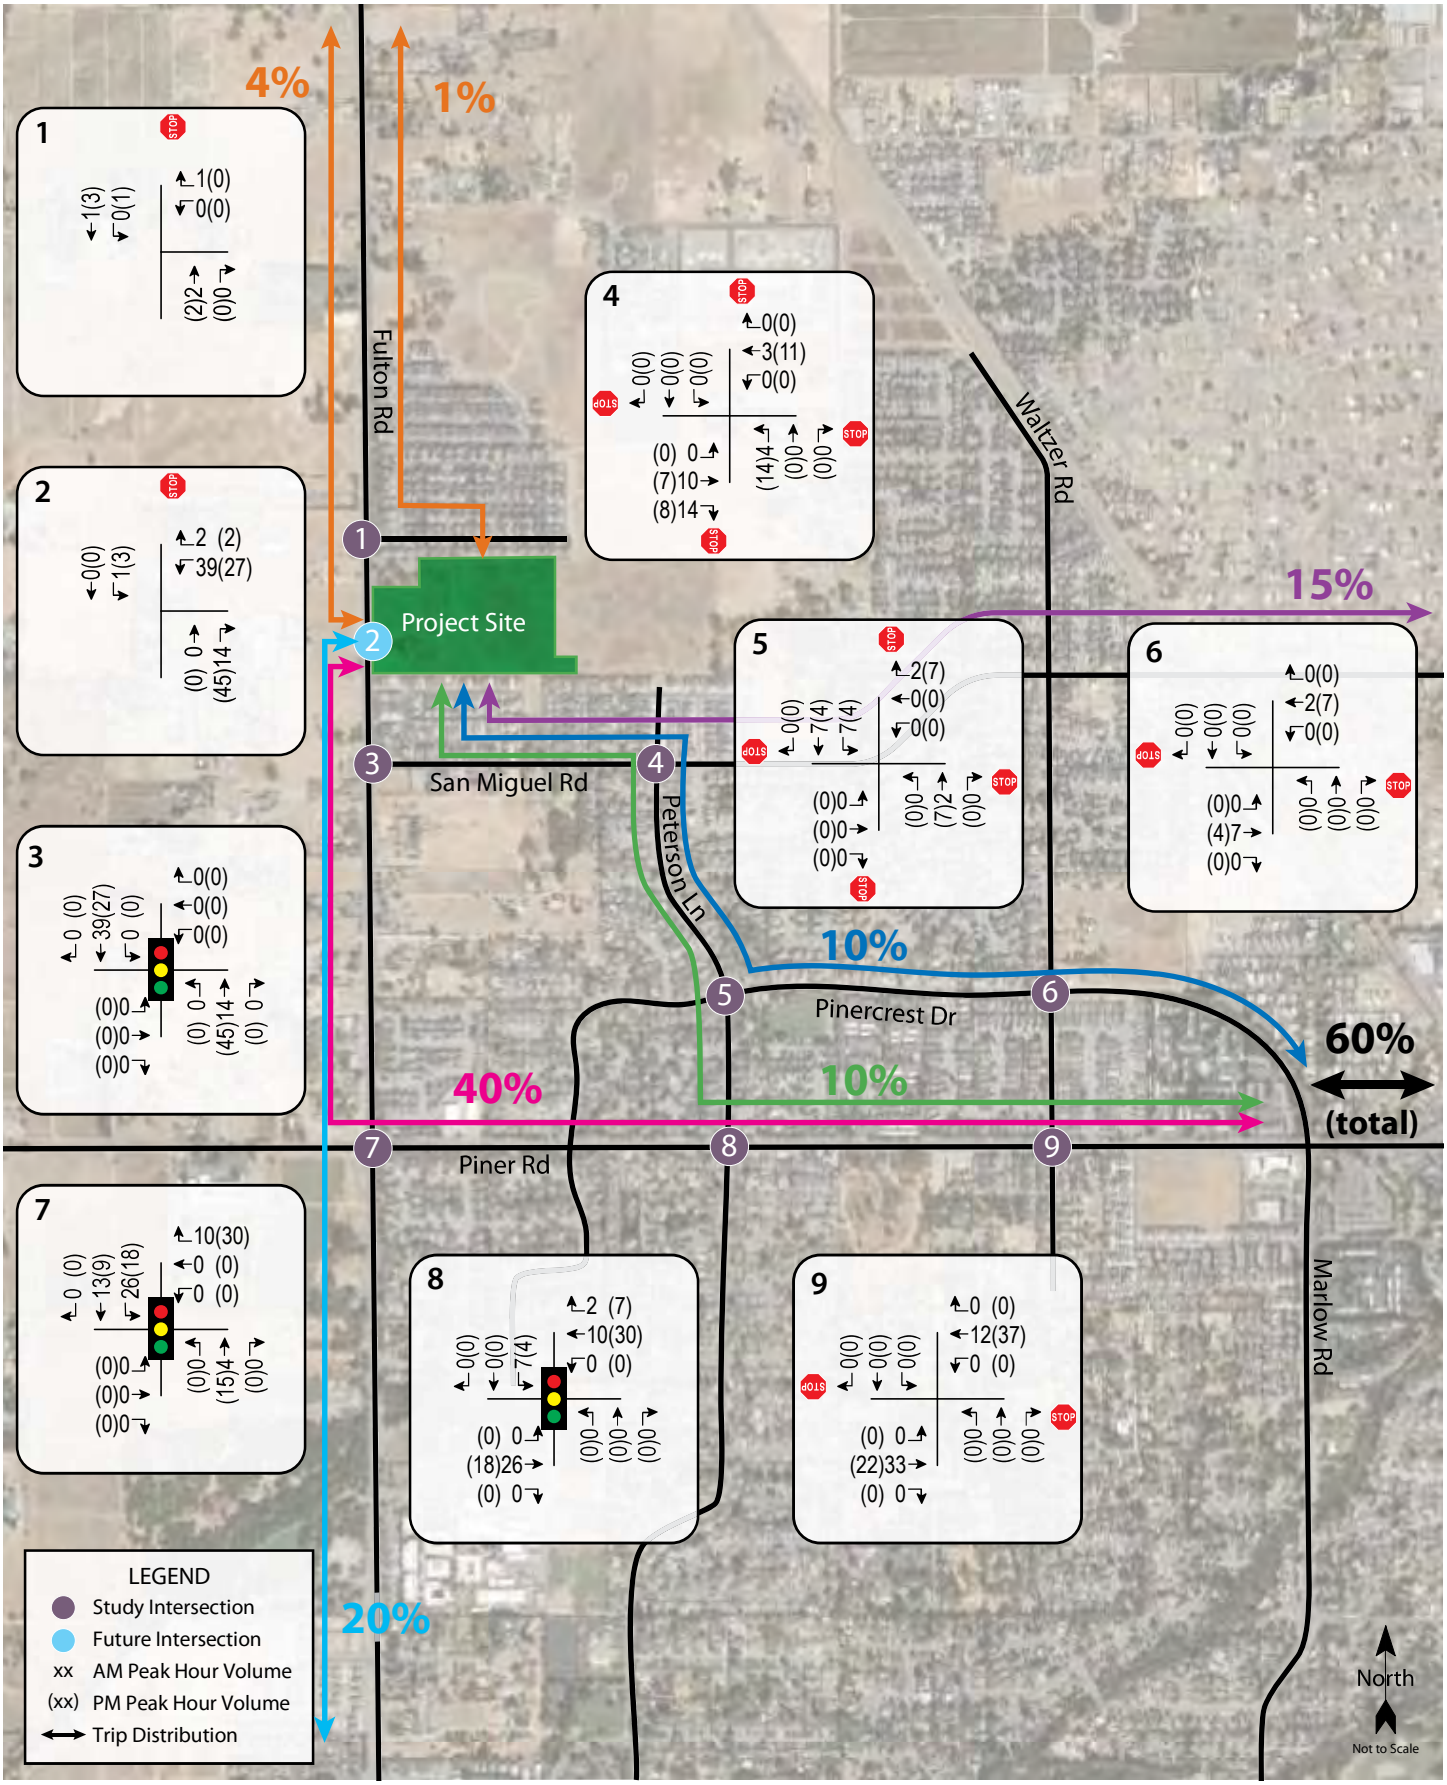
Traffic Impact Study for the 2220 Fulton Road Project

Figure 4 – Site Plan



sro497.ai 8/19

Traffic Impact Study for the 2220 Fulton Road Project

Figure 5 – Project Traffic Volumes and Trip Distribution

W-Trans

Table 7 – Trip Distribution Assumptions				
Route	**Percent**	**Daily Trips**	**AM Trips**	**PM Trips**
To/from the north on Fulton Rd via Tedeschi Dr	1%	11	1	1
To/from the north on Fulton Rd via New Project St	4%	45	4	5
To/from the east on San Miguel Rd	15%	169	13	18
To/from the east on Piner Rd via Peterson Ln	10%	112	9	12
To/from the east on Piner Rd via Pinercrest Dr	10%	112	9	12
To/from the east on Piner Rd	40%	450	35	47
To/from the south on Fulton Rd	20%	225	18	24
TOTAL	**100%**	**1,124**	**89***	**119***

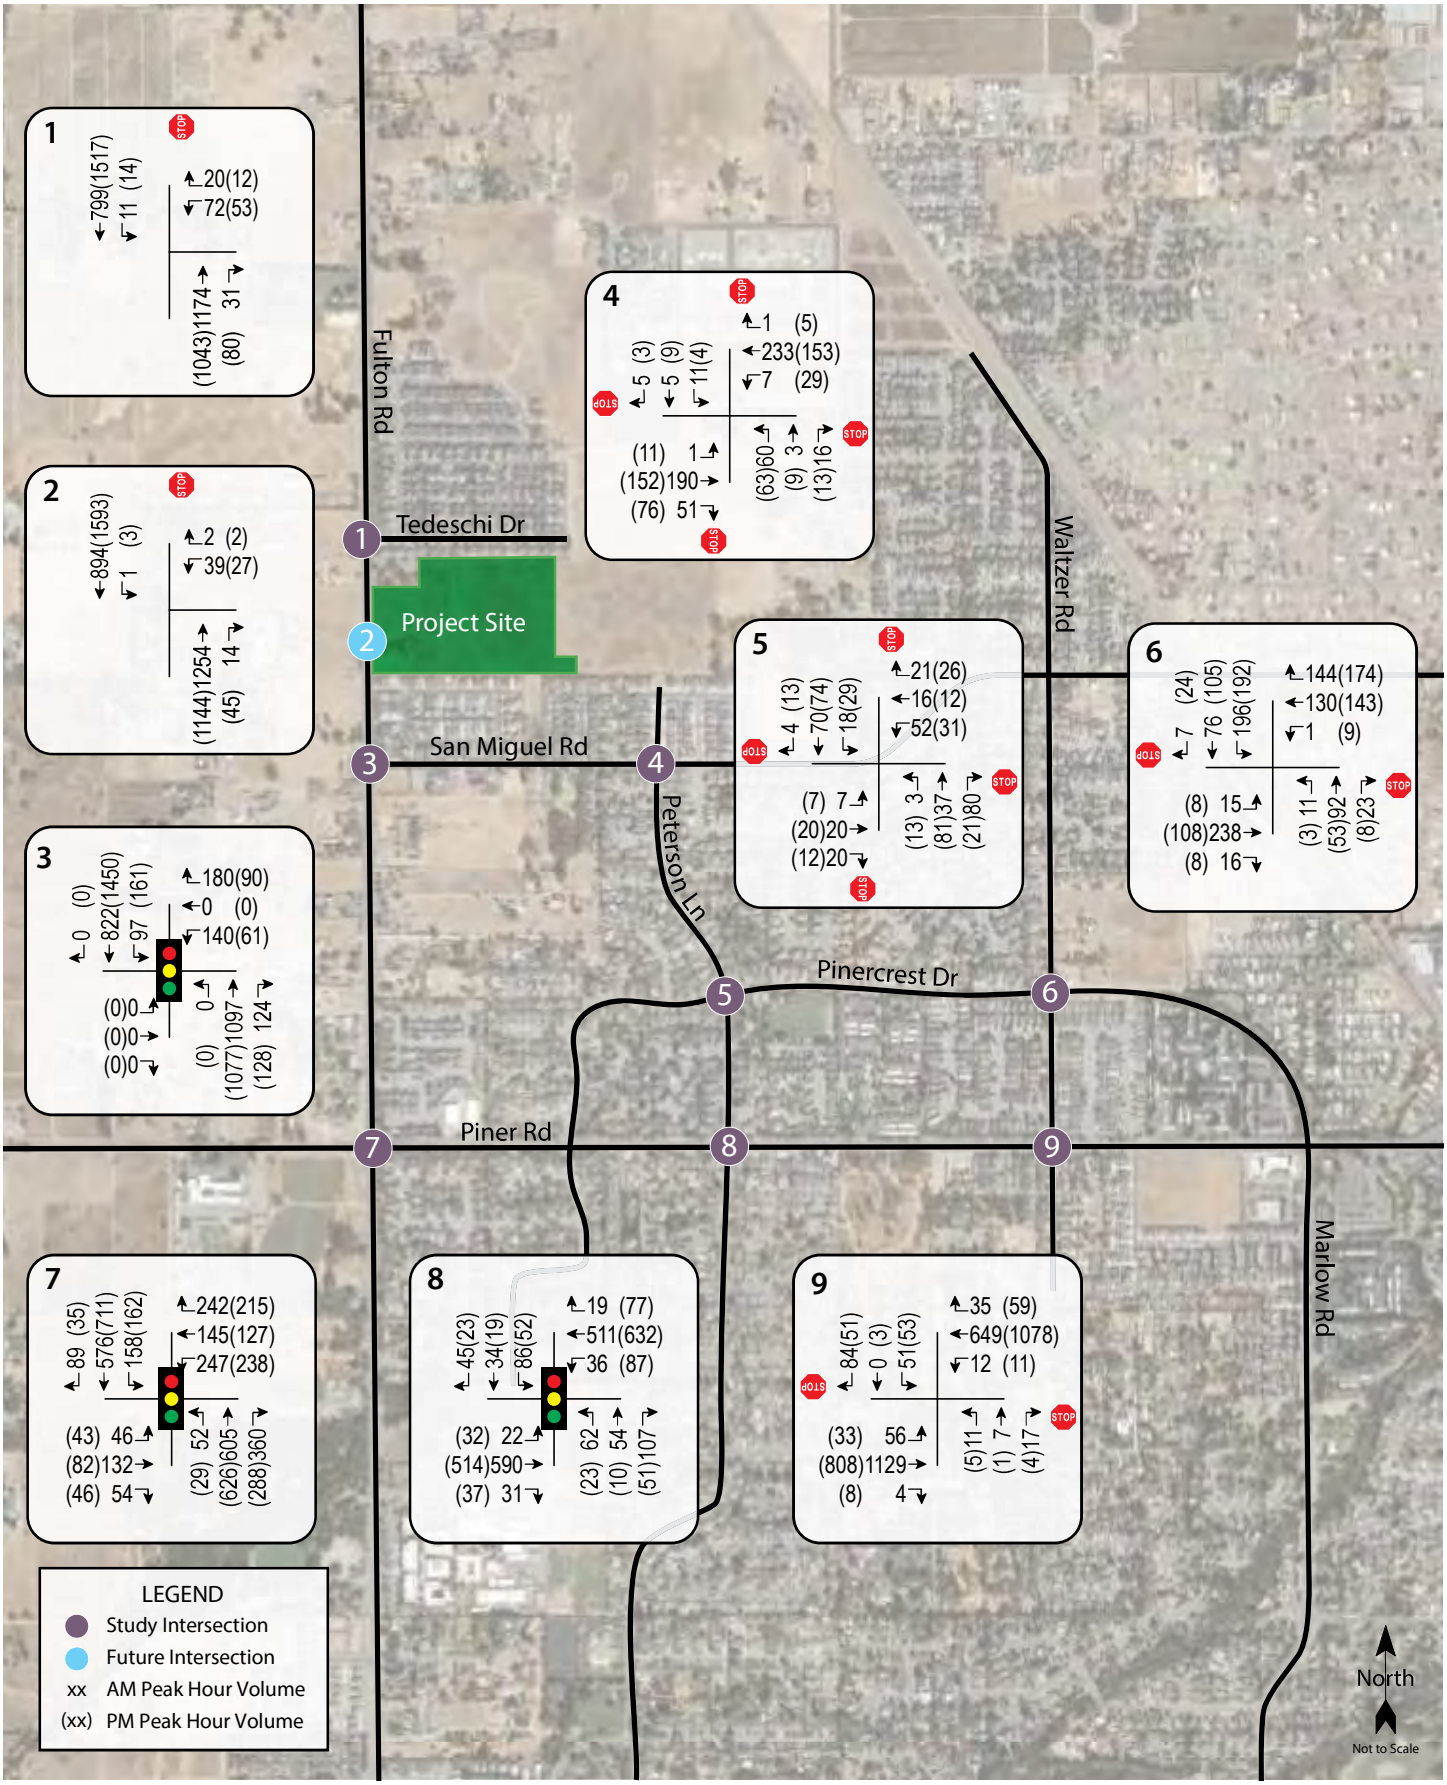
Note: * Trips do not add up to the calculated trip generation due to rounding

The proposed project is expected to result in a nominal number of trips through the adjacent neighborhoods because few destinations are to the north and for most of the new homes, exiting via the new project street would provide the most direct and convenient route. The project is therefore expected to generate only one new trip during each peak period through the neighborhood to the north to reach Tedeschi Drive and connect to Fulton Road.

Intersection Operation

Existing plus Project Conditions

Upon the addition of project-related traffic to the Existing volumes, the study intersections are expected to continue operating acceptably overall. Existing plus Project traffic volumes are shown in Figure 6. These results are summarized in Table 8.



sro497.ai 6/19

Traffic Impact Study for the 2220 Fulton Road Project

Figure 6 – Existing plus Project Traffic Volumes

W-Trans

Table 8 – Existing and Existing plus Project Peak Hour Intersection Levels of Service

Study Intersection *Approach*		Existing Conditions				Existing plus Project			
		AM Peak		PM Peak		AM Peak		PM Peak	
		Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS
1.	Fulton Rd/Tedeschi Dr	4.9	A	4.0	A	4.9	A	4.1	A
	Westbound (Tedeschi Dr) Approach	*110.9*	*F*	**	*F*	*111.6*	*F*	**	*F*
2.	Fulton Rd/New Project St	-	-	-	-	1.5	A	1.2	A
	Westbound (New Project St) Approach	-	-	-	-	*82.0*	*F*	*118.7*	*F*
3.	Fulton Rd/San Miguel Rd	13.9	B	13.9	B	13.9	B	13.9	B
4.	Peterson Ln/San Miguel Rd	9.0	A	8.6	A	9.1	A	8.8	A
5.	Peterson Ln/Pinercrest Dr	7.7	A	7.8	A	7.8	A	7.9	A
6.	Waltzer Rd/Pinercrest Dr	12.2	B	11.6	B	12.4	B	11.7	B
7.	Fulton Rd/Piner Rd	33.3	C	30.1	C	34.1	C	30.8	C
8.	Peterson Ln/Piner Rd	9.9	A	9.0	A	10.4	B	9.1	A
9.	Waltzer Rd/Piner Rd	11.6	B	10.8	B	12.9	B	12.4	B
	Northbound (Waltzer Rd) Approach	*78.1*	*F*	*75.7*	*F*	*86.7*	*F*	*85.2*	*F*
	Southbound (Waltzer Rd) Approach	**	*F*	**	*F*	**	*F*	**	*F*

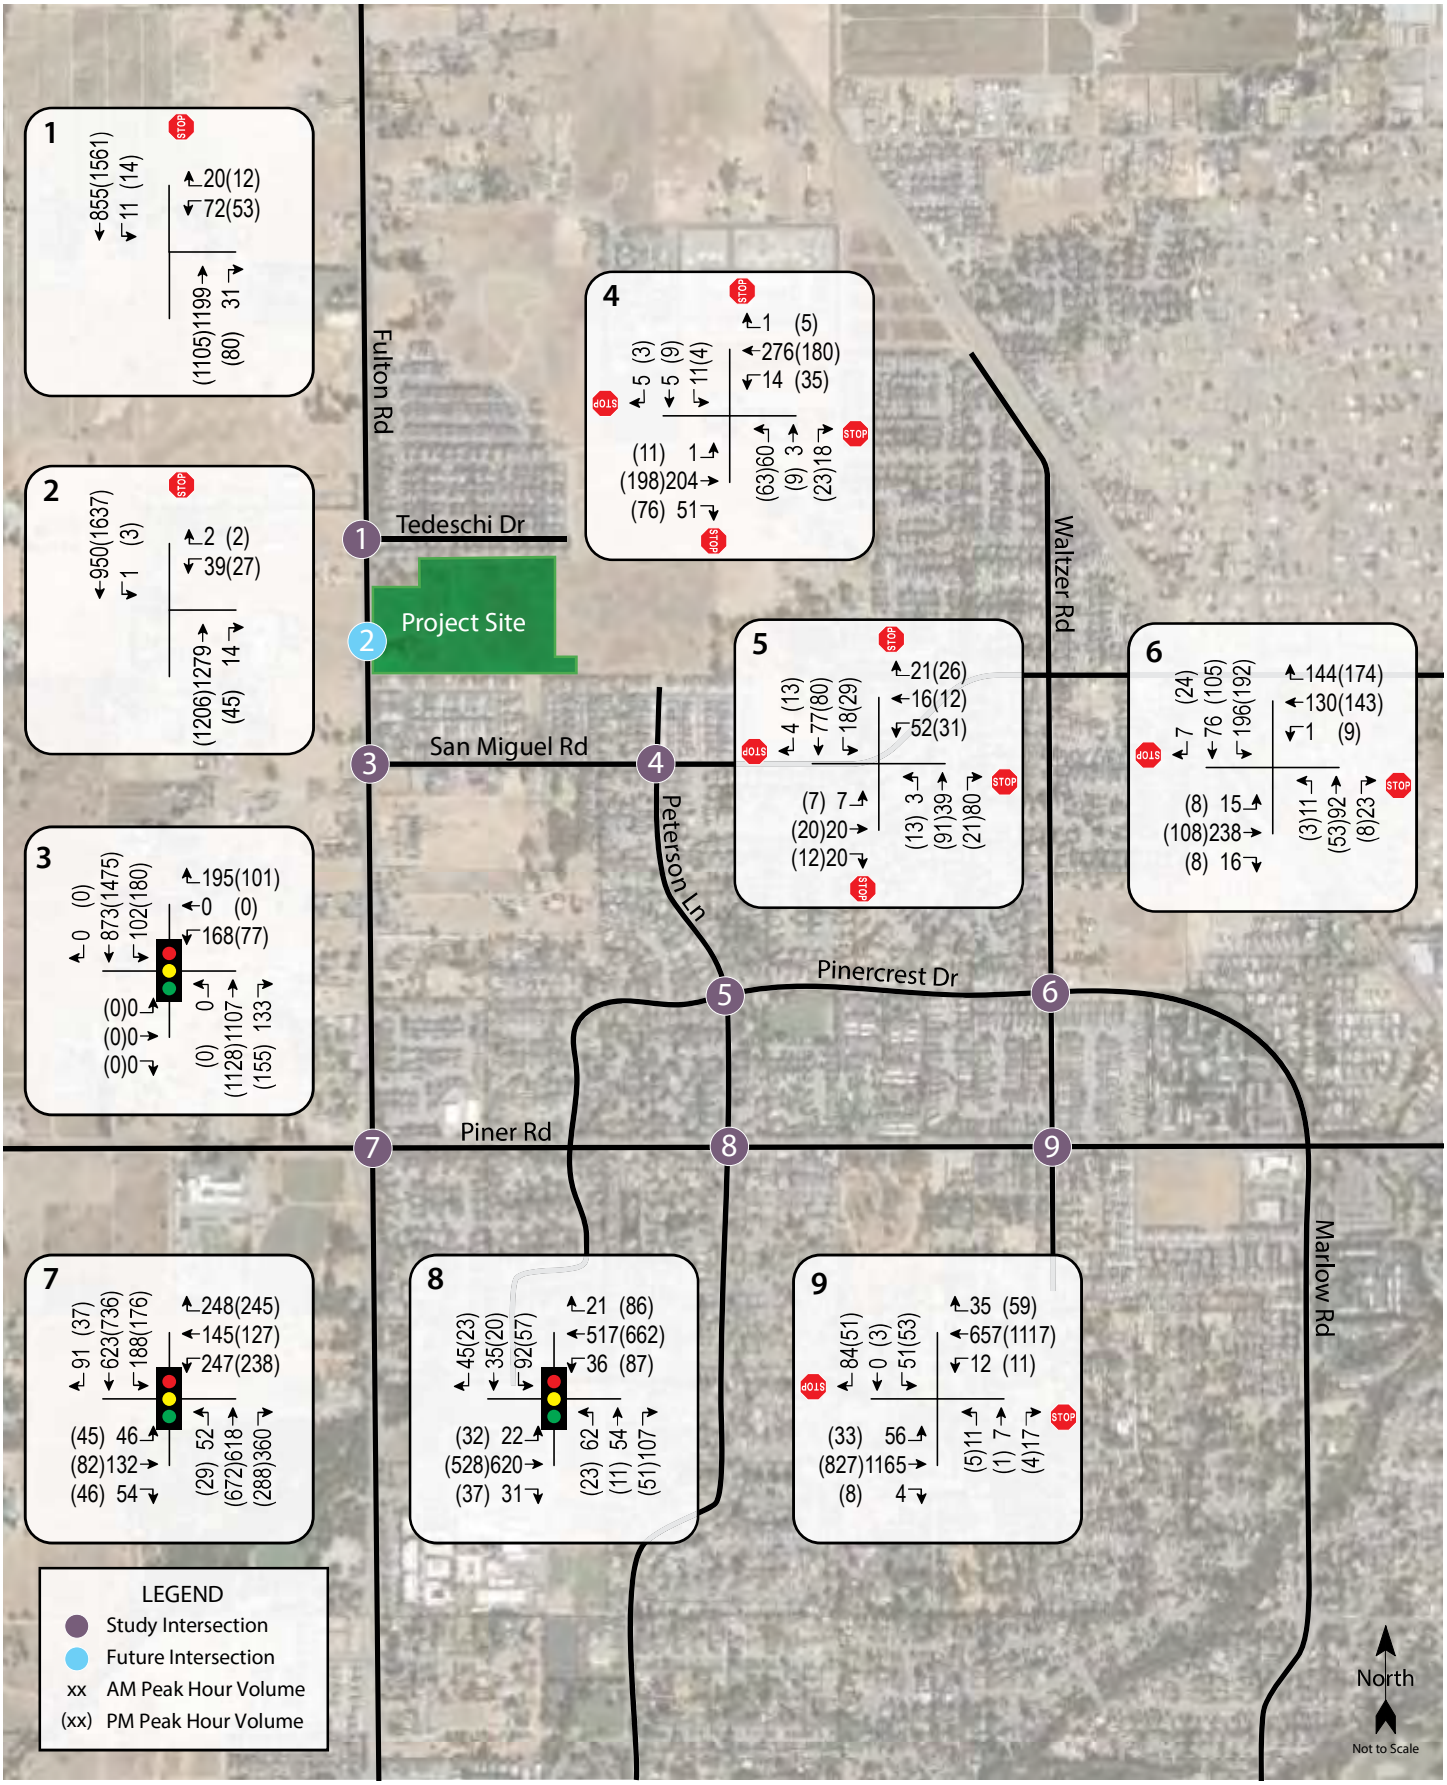
Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics;* **= delay greater than 120 seconds

It is noted that while the minor approach at Fulton Road/Tedeschi Drive is expected to operate at LOS F, with the construction of the proposed project, existing trips from the adjacent neighborhood off Andre Lane may reroute and benefit from the proposed road connection between Andre Lane and the signalized intersection of Fulton Road/San Miguel, thus improving the intersection's operation with the construction of the project. No diversion of trips was assumed, however, to retain a conservative analysis.

Finding – The study intersections are expected to continue operating acceptably overall upon the addition of project-generated traffic. It is noted that while some stop-controlled approaches are projected to operate at LOS E or F, this is considered acceptable as these intersections would be expected to operate at LOS A or B overall. The project's impact under Existing plus Project conditions is therefore less-than-significant.

Baseline plus Project Conditions

With project-related traffic added to Baseline volumes, the study intersections are expected to operate at the same levels of service overall with as without project-added volumes. Baseline plus Project traffic volumes are shown in Figure 7. These results are summarized in Table 9.



sro497.ai 6/19

8. Peterson Ln/Piner Rd	10.5	B	9.1	A	11.0	B	9.4	A
9. Waltzer Rd/Piner Rd	12.9	B	12.3	B	14.4	B	14.0	B
Northbound (Waltzer Rd) Approach	*86.4*	*F*	*85.1*	*F*	*96.3*	*F*	*96.3*	*F*
Southbound (Waltzer Rd) Approach	**	*F*	**	*F*	**	*F*	**	*F*

Notes: Delay is measured in average seconds per vehicle; LOS = Level of Service; Results for minor approaches to two-way stop-controlled intersections are indicated in *italics;* **= delay greater than 120 seconds

Finding – The study intersections are expected to continue operating acceptably overall at the same levels of service upon the addition of project-generated traffic, resulting in a less-than-significant impact on traffic operation.

Proportional Share for Future Improvements

It is understood that the City of Santa Rosa is planning to install a traffic signal at Piner Road/Waltzer Road and it is assumed that this future improvement is included in the City's Public Facilities Fee (PFF). Payment of the PFF would therefore provide a contribution to the signalization project.

Alternative Modes

Pedestrian Facilities

Given the proximity of residential neighborhoods as well as Piner High School to the south of the site, it is reasonable to assume that some project residents will want to walk, bicycle, and/or use transit for trips from and to the project site. Sidewalks exist along the project frontage, and site plans show that sidewalks will be provided along new project streets.

Finding – Pedestrian facilities serving the project site will be adequate upon completion of improvements planned as part of the project.

Bicycle Facilities

Existing bicycle facilities, including bike lanes on Fulton Road, together with shared use of minor streets provide adequate access for bicyclists.

Bicycle Storage

As proposed, all units would have a garage in which to store their bicycles, therefore additional bicycle storage facilities are not necessary.

Finding – Bicycle facilities serving the project site are adequate. Residents would be able to store bicycles in their private garages, so no bike parking facilities are required.

Transit

There are no existing transit routes or stops within an acceptable walking distance of the site; however, based on the distance between the project site and employment centers, it is reasonable to expect that some residents would want to travel using transit if it were available.

Finding – Transit facilities serving the project site are inadequate.

Recommendation – The project applicant should request that Santa Rosa CityBus evaluate the potential for modifying Route 6 to better serve residents living north of Piner Road and east of Fulton Road.

Access and Circulation

Site Access

The project would be accessible via a new roadway connecting to Fulton Road to be built as part of the project. The new project street would also connect to Orleans Street and Tedeschi Drive. There is an existing two-way left-turn lane (TWLTL) on Fulton Road at the New Project Street. As part of the project construction the TWLTL should be converted to provide a dedicated left-turn pocket in the southbound direction.

Sight Distance

Sight distance along Fulton Road at the proposed new project street was evaluated based on sight distance criteria contained in the *Highway Design Manual* published by Caltrans. The recommended sight distance at intersections of public streets is based on corner sight distances, with approach travel speeds used as the basis for determining the recommended sight distance. Additionally, the stopping sight distance needed for a following driver to stop if there is a vehicle waiting to turn into a side street or driveway is evaluated based on stopping sight distance criterion and the approach speed on the major street.

Sight distance at the proposed new project driveway was field measured. Based on a design speed of 45 mph, the minimum corner sight distance needed is 495 feet. Based on observations during a field visit, there is more than adequate sight lines in both directions at the project driveway along Fulton Road.

Finding – Sight distance along Fulton Road at the New Project Street driveway is expected to be more adequate, with sight lines of more than 495 feet in both directions from the new street approach.

Recommendation – The two-way-left-turn lane on Fulton Road at the New Project Street should be converted to a dedicated left-turn lane in the southbound direction.

Traffic Signal Warrants

A signal warrant analysis was performed to determine potential need for a traffic signal at Fulton Road/New Project Street.

Chapter 4C of the *California Manual on Uniform Traffic Control Devices* (CA-MUTCD) provides guidance on when a traffic signal should be considered.

Warrant 3, peak hour volumes, which is often the first warrant to be met, is based on the volumes during the highest-volume hour of the day. Under the Peak Hour Warrant the need for a traffic control signal shall be considered if an engineering study finds that the criteria in either of the following two categories are met:

A. If all three of the following conditions exist for the same one hour (any four consecutive 15-minute periods) of an average day:

    1. The total stopped time delay experienced by the traffic on one minor-street approach (one direction only) controlled by a STOP sign equals or exceeds: four vehicle-hours for a one-lane approach; or five vehicle-hours for a two-lane approach, and
    2. The volume on the same minor-street approach (one direction only) equals or exceeds 100 vehicles per hour for one moving lane of traffic or 150 vehicles per hour for two moving lanes, and

3. The total entering volume serviced during the hour equals or exceeds 650 vehicles per hour for intersections with three approaches or 800 vehicles per hour for intersections with four or more approaches.

B. The plotted point representing the vehicles per hour on the major street (total of both approaches) and the corresponding vehicles per hour on the higher-volume minor-street approach (one direction only) for one hour (any four consecutive 15-minute periods) of an average day falls above the applicable curve in Figure 4C-3 for the existing combination of approach lanes.

The intersection of Fulton Road/New Project Street would not warrant a traffic signal under volumes for either the Existing or Baseline plus project scenarios during either peak hour. Copies of the Signal Warrant Spreadsheets are provided in Appendix C.

On-Site Circulation

Based on a standard-sized fire truck size and the proposed site plan, on-site circulation would be adequate to accommodate emergency vehicle turning-movements. AutoTURN output for emergency vehicle access is provided in Appendix D. The site plan was also reviewed for compliance with the City of Santa Rosa neighborhood street design features. All streets widths are adequate to meet the City's standards.

Finding – Emergency access would be adequate.

Conclusions and Recommendations

Conclusions

- The proposed project would generate an average of 1,124 new daily trips to the surrounding roadway network with 88 trips during the weekday a.m. peak hour and 118 trips during the weekday p.m. peak hour.
- Under Existing Conditions all the study intersections are operating acceptably at LOS C or better overall during both peak hours, and is are expected to continue operating acceptably with the addition of project generated traffic.
- Under the anticipated Existing plus Approved, or "Baseline," volumes, the study intersections are expected to operate acceptably overall, without and with project-added traffic.
- Upon completion of sidewalks on both sides of all streets constructed by the project, pedestrian facilities would be connected and adequate.
- There are adequate bicycle facilities along the project frontage.
- There are no bus routes within an acceptable walking distance of the project site.
- Adequate sight distance is available at the proposed new project roadway connection.
- The intersection of Fulton Road/New Project Street was evaluated to determine potential need for a traffic signal; however, a signal is not warranted based on volumes during both peak hours for the Existing and Baseline plus Project scenarios.

Recommendations

- The project application should request that Santa Rosa CityBus investigate the potential for modifying Route 6 to better serve the neighborhood north of Piner Road and east of Fulton Road.
- The two-way left-turn lane on Fulton Road should be restriped at the New Project Street to a southbound left-turn lane.
- Piner Road/Waltzer Road is planned to be converted to a signalized intersection in the future. The applicant should pay the City's Public Facilities Fee, which is assumed to include the cost of improvements to the intersection.

Signal Warrant Spreadsheets

This page intentionally left blank

Warrant 3: Peak-Hour Volumes and Delay

Fulton Road & New Project Street
Santa Rosa

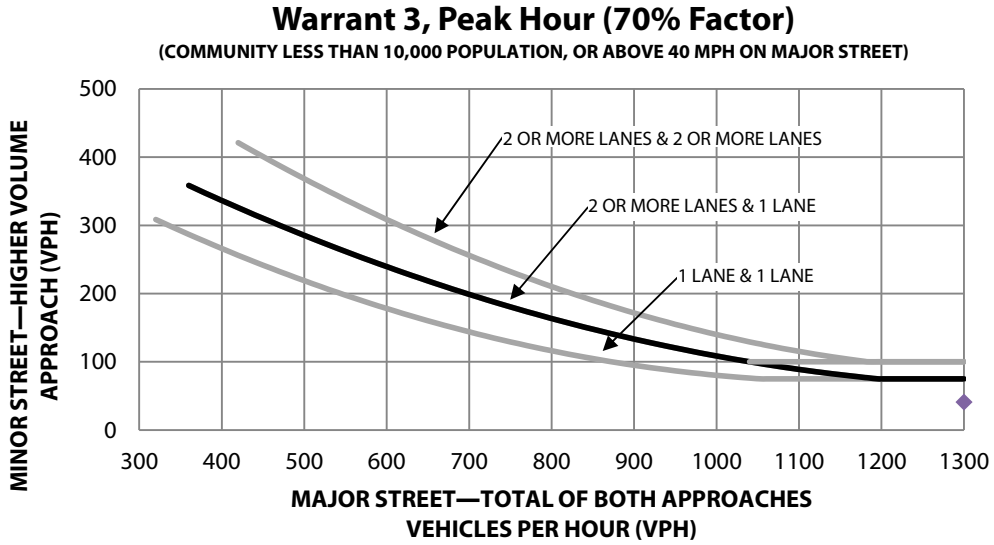
Project Name: 2220 Fulton Road Project TIS

Intersection: 2

	Major Street	Minor Street
Street Name	Fulton Road	New Project Street
Direction	N-S	E-W
Number of Lanes	2	1
Approach Speed	45	25

Population less than 10,000? No
Date of Count: Tuesday, June 19, 2018
Scenario: AM Existing plus Project

Warrant 3 Met?: Met when either Condition A or B is met	**No**
Condition A: Met when conditions A1, A2, and A3 are met	Not Met
Condition A1	Not Met
The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one lane approach, or five vehicle-hours for a two-lane approach	
Minor Approach Delay: 0.93 vehicle-hours	
Condition A2	Not Met
The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic of 150 vph for two moving lanes	
Minor Approach Volume: 41 vph	
Condition A3	Met
The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more appraches or 650 vph for intersections with three approaches	
Total Entering Volume: 2204 vph	
Condition B	Not Met
The plotted point falls above the curve	



Warrant 3: Peak-Hour Volumes and Delay

Fulton Road & New Project Street
Santa Rosa

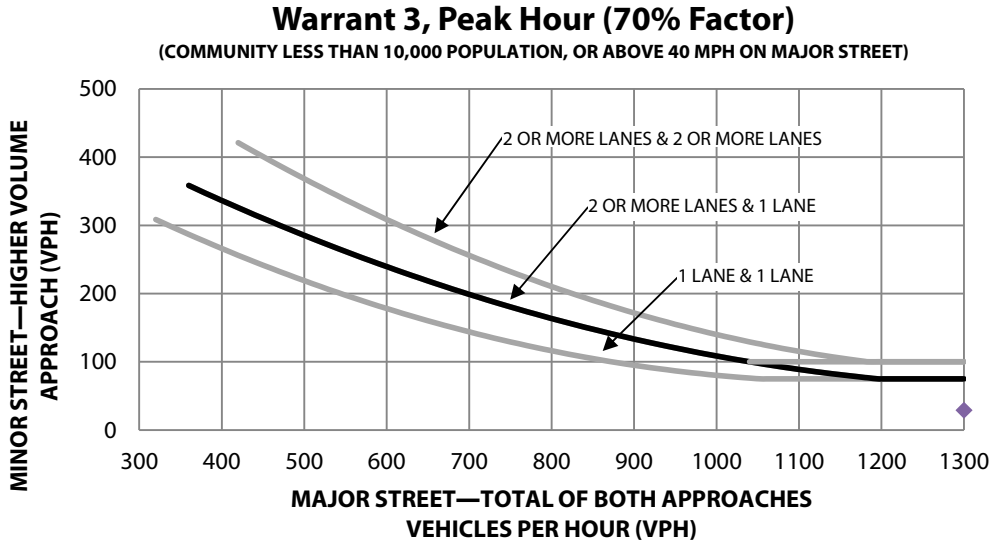
Project Name: 2220 Fulton Road Project TIS

Intersection: 2

	Major Street	Minor Street
Street Name	Fulton Road	New Project Street
Direction	N-S	E-W
Number of Lanes	2	1
Approach Speed	45	25

Population less than 10,000? No
Date of Count: Tuesday, June 19, 2018
Scenario: PM Existing plus Project

Warrant 3 Met?: Met when either Condition A or B is met	**No**
Condition A: Met when conditions A1, A2, and A3 are met	Not Met
Condition A1	Not Met
The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one lane approach, or five vehicle-hours for a two-lane approach	
Minor Approach Delay: 0.96 vehicle-hours	
Condition A2	Not Met
The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic of 150 vph for two moving lanes	
Minor Approach Volume: 29 vph	
Condition A3	Met
The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more appraches or 650 vph for intersections with three approaches	
Total Entering Volume: 2814 vph	
Condition B	Not Met
The plotted point falls above the curve	



Warrant 3: Peak-Hour Volumes and Delay

Fulton Road & New Project Street
Santa Rosa

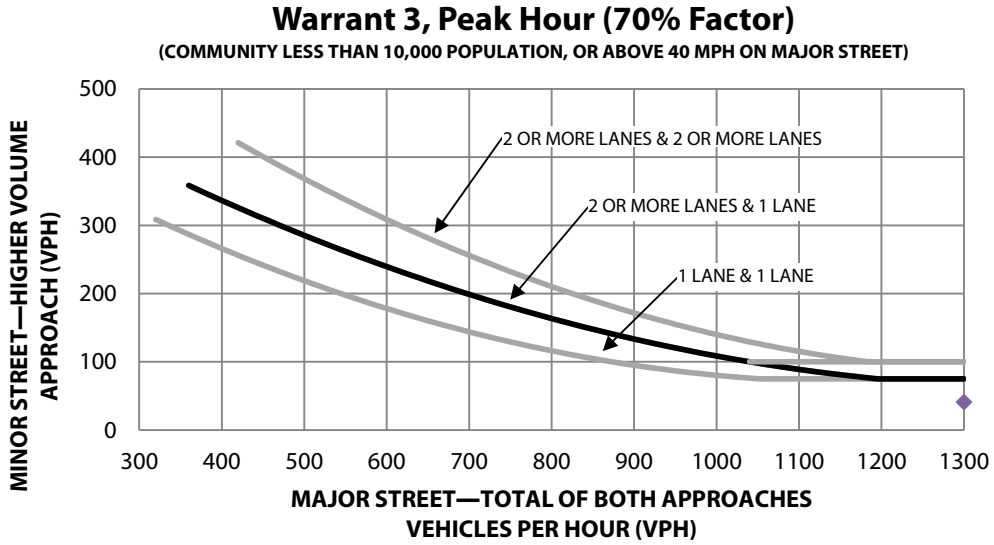
Project Name: 2220 Fulton Road Project TIS

Intersection: 2

	Major Street	Minor Street
Street Name	Fulton Road	New Project Street
Direction	N-S	E-W
Number of Lanes	2	1
Approach Speed	45	25

Population less than 10,000? No
Date of Count: Tuesday, June 19, 2018
Scenario: AM Baseline plus Project

Warrant 3 Met?: Met when either Condition A or B is met	**No**
Condition A: Met when conditions A1, A2, and A3 are met	Not Met
Condition A1	Not Met
The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one lane approach, or five vehicle-hours for a two-lane approach	
Minor Approach Delay: 1.06 vehicle-hours	
Condition A2	Not Met
The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic of 150 vph for two moving lanes	
Minor Approach Volume: 41 vph	
Condition A3	Met
The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more appraches or 650 vph for intersections with three approaches	
Total Entering Volume: 2285 vph	
Condition B	Not Met
The plotted point falls above the curve	



Warrant 3: Peak-Hour Volumes and Delay

Fulton Road & New Project Street
Santa Rosa

Project Name: 2220 Fulton Road Project TIS

Intersection: 2

	Major Street	Minor Street
Street Name	Fulton Road	New Project Street
Direction	N-S	E-W
Number of Lanes	2	1
Approach Speed	45	25

Population less than 10,000? No
Date of Count: Tuesday, June 19, 2018
Scenario: PM Baseline plus Project

Warrant 3 Met?: Met when either Condition A or B is met	**No**
Condition A: Met when conditions A1, A2, and A3 are met	Not Met
Condition A1	Not Met
The total delay experienced by traffic on one minor street approach (one direction only) controlled by a STOP sign equals or exceeds four vehicle-hours for a one lane approach, or five vehicle-hours for a two-lane approach	
Minor Approach Delay: 1.18 vehicle-hours	
Condition A2	Not Met
The volume on the same minor street approach (one direction only) equals or exceeds 100 vph for one moving lane of traffic of 150 vph for two moving lanes	
Minor Approach Volume: 29 vph	
Condition A3	Met
The total entering volume serviced during the hour equals or exceeds 800 vph for intersections with four or more appraches or 650 vph for intersections with three approaches	
Total Entering Volume: 2920 vph	
Condition B	Not Met
The plotted point falls above the curve
