## WATER AND WASTEWATER DEMAND FEES

### SUMMARY AND RECOMMENDATIONS

Demand fees are one-time fees charged for new service connections to Santa Rosa's water and wastewater systems. The fees are intended to reflect the estimated cost of capacity in the systems and fee revenue is used to help reimburse the utilities for capacity built to serve new development. Santa Rosa Water retained The Reed Group, Inc. and Hildebrand Consulting, LLC to assist the City with updating water and wastewater demand fees.

This report presents proposed water and wastewater demand fees for 2021 and describes the methodology, underlying data, and assumptions used to calculate the fees.

Current water and wastewater demand fee calculations were last formally updated in 2014, with annual inflationary adjustments to the fees since then. This report provides updated calculations of the water and wastewater demand fees using the same system buy-in methodology as used in 2014, which is characterized as follows:

- The system buy-in methodology is a common and generally well-accepted methodology for calculating capacity charges.
- The system buy-in methodology includes only the value of existing assets and excludes the costs of future or planned facilities; therefore, it does not require a formal capital improvement program or rely on planning documents.
- While capacity must be available to accommodate new service connections, the system buy-in methodology does not depend on an assessment of existing capacity availability; it therefore does not require the more detailed capacity analyses required by some other methodologies.
- Demand fees based on the system buy-in method are a reimbursement for past capital costs. Therefore, the *use* of the fees is to reimburse the utility for prior investments in facilities. Once reimbursed, the utility is able to spend fee revenue on any capital improvements within the utility. As a result, the accounting for demand fee expenditures is simplified.

**Exhibit 1** summarizes the proposed water and wastewater demand fee schedules. The proposed water demand fees reflect the estimated reasonable cost of capacity in the water system for various types of new development. The proposed wastewater demand fees reflect the estimated reasonable cost of capacity in the City's local wastewater collection system (local wastewater) and the regional water reuse system (regional water reuse) for various types of new development<sup>1</sup>.

---

<sup>1</sup> The regional water reuse system (formally referred to as the subregional system) provides wastewater treatment and reuse for the cities of Santa Rosa, Rohnert Park, Cotati, Sebastopol, and the South Park County Sanitation District.

**Exhibit 1**  
**Santa Rosa Water**  
**Proposed Water and Wastewater Demand Fees**

Type of Development	Proposed Demand Fees (1)		
	Water	Wastewater	Total
Single Family Residential			
Lot over 1 acre	\$ 8,299	\$ 7,040	\$ 15,339
Lot over 6,000 sq ft up to 1 acre	\$ 5,290	\$ 5,957	\$ 11,246
Lot up to 6,000 sq ft	\$ 3,602	\$ 5,776	\$ 9,378
Duplex and Triplex Units	\$ 2,827	\$ 5,054	\$ 7,881
Condominium, Apartment, and Mobile Home Units (2)			
with Separate Irrigation	\$ 1,687	\$ 5,054	\$ 6,741
without Separate Irrigation	\$ 2,189	\$ 5,054	\$ 7,243
Large ADUs, SROs, Senior Housing, and Small, High-Density Apartment Units	\$ 1,368	\$ 3,971	\$ 5,339
Commercial, Industrial, and Irrigation (per TGM) (3)	\$ 456	\$ 1,805	n/a (2)

**Notes:**

- (1) Water demand fee determined based on average day demand during peak month. Wastewater demand fee determined based on average dry weather flow (ADWF).
- (2) Includes complexes with 4 or more dwelling units.
- (3) Water and wastewater demand fees are not additive for non-residential uses since they are applied to different demand factors (see note 1). TGM = Thousands of gallons per month.

Proposed demand fees for residential development reflect updated information on water usage and wastewater generation for residential development. The updated information reflects trends towards more efficient water usage. As a result, the proposed *combined* water and wastewater demand fees for residential accounts are all lower than the current demand fees due to reduced water usage characteristics. While the proposed water and wastewater demand fees for non-residential accounts are increasing, the fees to each development project are based on estimated usage characteristics for each project. Water demand fees are based on average daily demand during the peak month of usage. Wastewater demand fees are based on estimated average dry weather flow (ADWF). As such, the demand fees will depend on the unique water and wastewater demand characteristics of each non-residential development project.

**Exhibit 2** summarizes the proposed change in combined water and wastewater demand fees for various types of residential development. Depending on the type of residential dwelling, the combined water and wastewater demand fees are proposed to decrease from 2.4 to 32.7 percent. The non-residential base water demand fee (\$/TGM) is proposed to increase by about 55 percent and the non-residential base wastewater demand fee (\$/TGM) is proposed to increase by about 15 percent (TGM = thousand gallons per month).

<b>Exhibit 2 Santa Rosa Water Comparison of Current and Proposed Demand Fees</b>					
Type of Development	Combined Water and Wastewater Demand Fees				
	Current	Proposed	\$ Change	% Change	
Single Family Residential					
Lot over 1 acre	\$ 17,029	\$ 15,339	\$ (1,690)		-9.9%
Lot over 6,000 sq ft up to 1 acre	\$ 13,309	\$ 11,246	\$ (2,063)		-15.5%
Lot up to 6,000 sq ft	\$ 9,606	\$ 9,378	\$ (228)		-2.4%
Duplex and Triplex Units	\$ 10,153	\$ 7,881	\$ (2,272)		-22.4%
Condominium, Apartment, and Mobile Home Units (1) with Separate Irrigation	\$ 7,507	\$ 5,054	\$ (2,453)		-32.7%
Large ADUs, SROs, Senior Housing, and Small, High-Density Apartment Units	\$ 6,953	\$ 5,339	\$ (1,614)		-23.2%
Commercial, Industrial, and Irrigation (per TGM) (2)	\$ 1,858	\$ 2,261	n/a (3)		n/a (3)

**Notes:**

(1) Includes complexes with 4 or more dwelling units.

(2) Current non-residential water demand fee is \$294/TGM of average demand in the peak month.

Current non-residential wastewater demand fee is \$1,564/TGM of average dry weather flow (ADWF).

Proposed non-residential water demand fee is \$456/TGM, an increase of about 55 percent.

Proposed non-residential wastewater demand fee is \$1,805/TGM, an increase of about 15.4 percent.

TGM = Thousands of gallons per month.

(3) Change will depend on the demand characteristics of each proposed development.

The balance of this report includes (1) the statutory requirements for demand fees, (2) the demand fee methodology used herein, (3) underlying assumptions and information used in the calculations, (4) fee calculations and fee schedules, and (5) administrative and future update recommendations.

## LEGAL REQUIREMENTS FOR WATER AND WASTEWATER DEMAND FEES<sup>2</sup>

The City has broad authority to charge new connections for the cost of access to current and future capital facilities. The limitations of that authority are encompassed by the requirement that capacity charges<sup>3</sup> imposed on new development bear a *reasonable relationship* to the needs created by, and the benefits accruing to that development. California courts have long used that *reasonableness* standard or *nexus* test to evaluate the constitutionality of exactions, including water and wastewater capacity charges.

<sup>2</sup> The Reed Group, Inc. is not a law firm, and the information contained in this section should not be considered legal advice. Information presented here represents our understanding of the legal framework by which capacity charges are calculated. The City should seek the advice of legal counsel regarding the specific statutory requirements for each type of capacity charge.

<sup>3</sup> "Demand fee" is the City's term for fees paid by new development to provide capacity in water and wastewater system facilities necessary to accommodate the needs of new development. The terms "connection fee" or "capacity charge" are more typical terms used for this type of fee. This report uses the "capacity charge" when referring generally to this type of fee and "demand fee" when referring specifically to the City's fees.

Central to the City's authority to impose capacity charges is Government Code Section 66013. Government Code Section 66013 contains requirements specific to water and wastewater capacity charges, and states: "when a local agency imposes fees for water connections or sewer connections, or imposes capacity charges, those fees or charges shall not exceed the estimated reasonable cost of providing the service for which the fee or charge is imposed."

Capacity charges should also meet the reasonable relationship standard or nexus test mentioned earlier and should reflect consideration of the following criteria, which would likely be considered by a court in evaluating the validity of the fees:

- *Need* – Capacity charges should only be imposed on development that will need capacity in facilities provided by the City.
- *Benefit* – Improvements to be funded (or costs to be reimbursed) by capacity charges should satisfy service needs related to the development on which the charges are imposed.
- *Amount* – The amount of the capacity charges should reflect the estimated reasonable cost of providing service capacity and the share of the costs attributable to the service needs of new development.
- *Earmarking* – Revenue from capacity charges should be segregated from other funds and used solely to pay for the facilities for which the charge was imposed<sup>4</sup>.
- *Timely Expenditure* – Revenue from capacity charges should be expended within a reasonable time after it is collected.

Applying these criteria to the City's situation requires an understanding of how capital improvement needs are determined, how capacity is provided to new development, how costs are estimated and allocated, and how capital improvements are financed and paid for.

## DEMAND FEE METHODOLOGIES

There are numerous methods to calculate capacity charges. Each method has varying advantages and disadvantages and no method is universally recognized as the best. The methodology appropriate for any particular utility service is dependent on a number of issues including the availability of planning documents and a defined capital improvement program, the extent to which the utility's infrastructure is built out, and the availability of capacity within the existing utility systems. Any methodology used for calculating capacity charges should be:

- *Reasonable* – Capacity charges should not exceed the estimated reasonable cost of providing capacity to new development.
- *Equitable* – The cost of system assets should be allocated on a proportional basis that is reasonably related to the needs that are created and the benefits that are received by new development.

---

<sup>4</sup> In the case of capacity charges based on the system buy-in method, the use of the fees is to reimburse the utility for prior investments in facilities. Capacity charge revenue can then be used for any capital improvements within the utility. Earmarking is not required with this methodology.

- *Administratively Feasible* – Capacity charges should be administratively simple and easily explained to developers and the public.
- *Legally Justifiable* – Capacity charges must be developed and adopted in accordance with California statutes and court decisions.

Within all of the available methodologies there are two primary approaches – the system buy-in methodology and the incremental-cost methodology. Other methodologies are usually some variation or combination of these two methods. These two primary methods are described below to illustrate the different perspectives that can be used to determine appropriate fees. In 2014, the City updated its water and wastewater demand fees using the system buy-in methodology and that method has been employed with this update. It continues to be the most appropriate for the City at this time.

### ***System Buy-In Method***

The system buy-in method is based on the average investment in the existing capital assets by current customers. In short, the system buy-in fee is determined by taking the current value of assets (historical cost escalated to current dollars and adjusted for depreciation) divided by the current number of customers (expressed in equivalent residential units). By paying capacity charges calculated on this basis, new development essentially *buys into* the existing capital facilities and capital reserves on par with existing users. Responsibility for new capital improvements is then shared by all customers through their monthly service charges. The system buy-in methodology has four distinct advantages:

- The system buy-in methodology is a common and generally well-accepted methodology for calculating capacity charges.
- The system buy-in methodology includes only the value of existing assets and excludes the costs of future or planned facilities; therefore, it does not require a formal capital improvement program or rely on planning documents.
- While capacity must be available to accommodate new service connections, the system buy-in methodology does not depend on an assessment of existing capacity availability; it therefore does not require the more detailed capacity analyses required by some other methodologies.
- Capacity charges based on the system buy-in method are a reimbursement for past capital costs. Therefore, the *use* of the fees is to reimburse the utility for prior investments in facilities. Once reimbursed, the utility is able to spend fee revenue on any capital improvements within the utility. As a result, detailed accounting of capacity charge expenditures is simplified<sup>5</sup>.

The system buy-in method is best applied in areas that are largely built out with infrastructure largely already in place (i.e., existing capacity is generally adequate to meet foreseeable needs). It is also appropriate when the cost of providing additional capacity is believed to be similar to

---

<sup>5</sup> By accepting fee payments from new development, the utility is indicating a willingness and ability to provide service. Therefore, while not a requirement, it is recommended that capacity charge revenues be utilized for capital improvements that enhance service delivery capabilities.

the costs incurred in acquiring existing capacity. At times, new development may be required to install facilities (e.g., extend pipelines into new development area) as a condition of service<sup>6</sup>. This does not preclude or invalidate a system buy-in capacity charge. However, if significant expansion of utility systems is required, and future costs may be significantly different from historical costs, then the system buy-in approach may not be the best approach.

### *Incremental Cost Method*

The incremental cost methodology is the more common capacity charge approach for utilities experiencing considerable new growth and/or needing to provide new system capacity. The approach is based on the estimated cost of new or planned capital facilities. The cost of growth-related facilities is allocated to the new development to be served by the facilities. Under this approach, new customers pay for the incremental investment necessary for system expansion. The incremental approach is most commonly applied when new or expanded central or backbone facilities are required to provide capacity for new development.

The incremental cost methodology requires more detailed analyses in order to satisfy nexus requirements. First, the capacity requirements of new development must be defined using service level standards. Second, the amount of capacity provided by new facilities must be determined. To the extent that existing capacity does not provide the specified level of service to existing customers, the incremental cost capacity charges paid by new development cannot be used to correct those existing deficiencies. As a result, it is fairly common for only a portion of new capital facility project costs to be included in fee calculations (the portion of the project that expands the capacity of the system).

The incremental cost methodology is simplified when all new infrastructure is required to serve new development areas. In this situation, service level standards are defined, new facilities identified, and costs are determined. The cost of facilities is then allocated (or spread) across all new development to be served by the facilities. Units of development must be defined as well as demand factors for different types of development. Capacity charges based on the incremental cost methodology are subject to statutory accounting requirements because fee revenue must be accounted for until specific capital improvements are constructed.

## **CURRENT DEMAND FEES**

The last comprehensive demand fee study occurred in 2014, when the City adopted new demand fees using the system buy-in methodology. Since 2014, the water and wastewater demand fees have been adjusted annually for inflation<sup>7</sup>. As such, current demand fees are about 17.8 percent higher than the fees adopted in 2014. **Exhibit 3** presents the current water and wastewater demand fee schedules.

---

<sup>6</sup> Santa Rosa, like other cities, requires new development to install new facilities to accommodate project-specific needs, as well as to size new facilities to accommodate General Plan growth.

<sup>7</sup> Demand fees are adjusted annually based on changes to the *Engineering News Record's* 20-Cities Construction Cost Index (CCI).

**Exhibit 3**  
**Santa Rosa Water**  
**Current Water and Wastewater Demand Fees (1)**

Type of Development	Current Demand Fees (2)		
	Water	Wastewater	Total
Single Family Residential			
Lot over 1 acre	\$ 8,114	\$ 8,915	\$ 17,029
Lot over 6,000 sq ft up to 1 acre	\$ 5,645	\$ 7,664	\$ 13,309
Lot up to 6,000 sq ft	\$ 2,881	\$ 6,725	\$ 9,606
Multi-Family Residential Units (3)			
without Separate Irrigation	\$ 2,646	\$ 7,507	\$ 10,153
with Separate Irrigation	\$ -	\$ 7,507	\$ 7,507
Large ADUs, Senior Housing Units, SRO Units	\$ 1,323	\$ 5,630	\$ 6,953
Commercial, Industrial, and Irrigation (per TGM) (4)	\$ 294	\$ 1,564	n/a (4)

**Notes:**

- (1) Effective January 1, 2021.
- (2) Water demand fee determined based on average day demand during peak month.  
Wastewater demand fee determined based on average dry weather flow (ADWF).
- (3) Includes duplexes, triplexes, fourplexes, condominiums, apartments, and mobile home units.
- (4) Base (\$/TGM) water and wastewater demand fees are not additive for non-residential uses since they are applied to different demand factors.

**CHANGES SINCE THE 2014 DEMAND FEE STUDY**

The 2014 demand fee study occurred as the City (as well as region and state) was in the midst of an extended drought with mandatory water use restrictions. That event, as well as the City's ongoing efforts to encourage water conservation and efficient water use, have resulted in a significant reduction in water usage and wastewater flows. Whereas the 2014 demand fee study examined water use characteristics from 2010 through 2013, this updated study examined water use characteristics from 2016 through 2019. As described later in this report, residential water usage has declined significantly since the last demand fee study and is contributing to a reduction in the combined water/wastewater demand fees for residential accounts.

In addition, capital spending, debt financing practices, reserve levels, and economic conditions all evolve over time. Periodically updating demand fee calculations helps ensure that new development continues to pay a fair and proportionate share of water and wastewater system costs.

**METHODOLOGY FOR THE 2020 DEMAND FEE UPDATE**

At the outset of the demand fee study, the system buy-in methodology, its benefits and application, water and wastewater capital improvement plans and priorities, and other factors related to the fee calculation methodology were reviewed with Santa Rosa Water staff. It was

determined that system buy-in methodology continues to be an appropriate approach for the City's water and wastewater demand fees.

The system buy-in method will continue to provide a conservative approach for determining demand fees.

### ***Water and Wastewater Demand Fee Structures***

A separate issue related to the demand fee update pertains to demand characteristics used to determine residential water and wastewater demand fees. Current residential water and wastewater demand fees vary with the type of development (single family and multi-family) and the size of the lot for single family. In addition, new types of residential development, such as accessory dwelling units (ADUs) and high-density smaller units, are becoming more common within the City. Finally, whereas duplexes and triplexes have previously been included within the multi-family residential category, a distinction is now recommended between these groups because the former tend to include irrigation within the primary water service connection whereas larger complexes (four units and above) tend to have separate irrigation connections. This study included evaluating recent water use characteristics of a variety of residential development types.

Water demand fees are assessed based on peak month water demand. Lot size, and the corresponding irrigation water demand, is a significant factor in anticipating potential peak month water demand for single family residential development. The City's water demand fee schedule reflects three lot-size ranges. Irrigation needs is also a factor for duplexes and triplexes. Whereas larger residential developments (four units and above) are generally required to have separate irrigation connections. Updated water demand analyses provide a new level of refinement in estimating the potential demand various types of residential development can place on the water system. The demand fee schedule has been refined to reflect this newly acquired water demand analysis.

Residential wastewater demand fees are assessed based on the "sewer cap," which is an estimate of indoor water usage based on winter water use data. Previous analyses indicated a relationship between lot size and sewer cap, with homes on larger lots tending to have larger sewer caps. While lot size, in itself, does not affect wastewater flow, lot size may be an indicator of home size, and home size may be an indicator of household size, which affects wastewater flow. The 2014 demand fee study found a narrowing of differences in sewer caps across single family lot sizes. Recent water use data suggest a continuing shift in wastewater flow patterns, and the variation across lot sizes continues to narrow. As a result, updated wastewater demand fees include changes regarding potential wastewater demands by residential development type.

Details of peak month (for water demand fees) and winter average (for sewer caps and wastewater demand fees) water use characteristics based on the analysis of data from 2016 through 2019 are presented later in this report and have been incorporated into the fee calculations.

## **WATER AND WASTEWATER DEMAND FEE CALCULATIONS**

Water and wastewater demand fee calculations rely on data and information obtained from the City including:

- Water, local wastewater, and regional water reuse fixed asset records providing historical cost, age, and expected life of facilities and long-lived assets
- Existing and past long-term debt used to finance existing water, local wastewater, and regional water reuse facilities
- Financial information for the utilities identifying reserves specifically set aside for capital improvements
- Peak water system demand and average daily wastewater flow information

Specific components of the demand fee calculations are described below.

### *Value of Existing Facilities*

The first step to calculating demand fees is to estimate the value of the existing water, local wastewater, and regional water reuse system facilities. This is accomplished with the use of the City's fixed asset records. The value of the existing facilities can be determined using a variety of methods. However, the most common, and the one we recommend, is depreciated replacement cost.

The City's fixed asset records provide data for water, local wastewater, and regional water reuse assets including historical cost, date of acquisition, and accounting service life. This information is used for determining annual depreciation of utility assets. The depreciated replacement cost of these assets is determined by taking the historical cost of each asset escalating to a current value (replacement cost) using the *Engineering News Record's* 20-Cities Construction Cost Index (20-Cities CCI) and depreciating this value using the age and expected service life. The same result is obtained by escalating the book value of each asset to current value using the 20-Cities CCI. This calculation is performed for each asset item. Costs have been escalated to January 2021 using a 20-Cities CCI value of 11,628.

The City's fixed asset records include more than 3,500 individual assets within the water, local wastewater, and regional water reuse systems. These include many fully depreciated items that remain in service. Fully depreciated items have no value in the demand fee calculations even though they obviously still have value since they are still in active service. In this way, the proposed demand fee analysis is somewhat conservative.

**Exhibit 4** summarizes the valuation of existing water, local wastewater, and regional water reuse system assets as of June 30, 2019. The valuation summary includes original cost, net book value, replacement cost, and depreciated replacement cost. Only the last column, depreciated replacement cost, is used in the demand fee calculations. **Appendix B** includes a complete listing of the water, local wastewater, and regional water reuse system fixed assets summarized in Exhibit 4.

### ***Past and Current Long-Term Debt Obligations***

The cost of acquiring and constructing existing facilities should also include the cost of long-term debt financing. Both issuance and interest costs associated with financing capital facilities are legitimate costs of the facilities and are appropriate to include in demand fee calculations.

Long-term debt has predominately been used to finance the regional water reuse system, although portions of both the water system and local wastewater systems have also been debt financed. For purposes of demand fee calculations, historical interest payments for the past 25 years are incorporated into the demand fee calculation. Debt service payment information prior to FY 95-96 has not been included due to inaccessibility of information. Debt issuance costs have

been included on all issues occurring since 1990. Since the most significant debt issues have occurred since the mid-1990s the omission of earlier interest and issuance costs is not likely to be significant and makes the fee calculation a bit conservative.

Historical debt issuance and interest costs have been escalated to reflect the time value of money. Escalation has been made using the historical rate of return on Local Agency Investment Fund (LAIF) accounts. Just as fixed assets depreciate over time, losing value as they wear out, financing costs should also diminish over time. The calculation of debt issuance and interest costs reflect the *depreciation* of these costs over a 50-year period, similar to the lives of the fixed assets that were financed.

**Exhibit 5** summarizes the present value of past interest payments on past and existing long-term debt obligations, including the allocation of interest to the water, local wastewater, and regional water reuse systems. **Exhibit 6** summarizes the present value of long-term debt issuance costs on all issues since 1990. The present value of debt issuance and interest costs is added to fixed asset values of existing water, local wastewater, and regional water reuse facilities as part of the demand fee calculation.

**Exhibit 5**  
**City of Santa Rosa**  
**Summary of Long-Term Debt of the Water, Local Wastewater, and Regional Water Reuse Systems**

Fiscal Year	Annual Debt Service Totals (1)			Present Value of Past Interest Payments (2)			PV Factor (3)

**Notes:**

- (1) From Official Statements associated with each issue.  
(2) Present value factors based on annual LAIF interest rates and depreciated based on 50-year effective life.  
(3) Expenditures of debt proceeds to water, local wastewater, and regional water reuse systems.

***Deduction for Outstanding Principal on Long Term Debt***

Outstanding principal on long-term debt is deducted from the valuation of the water, local wastewater, and regional water reuse systems. In effect, this represents the portion of the existing utility systems yet to be fully acquired. As of June 30, 2020, the outstanding principal on long-term debt was as follows:

Water System	\$18,813,000
Local Wastewater System	\$16,098,000
Regional Water Reuse System	\$149,563,000

### ***Capital Fund Reserves***

Moneys held within water, local wastewater, and regional water reuse utilities and designated for future capital improvements can be added to the system valuation. As of June 30, 2020, the amounts shown below are available to fund current and future capital projects. The funds include those appropriated for CIP projects, previously collected demand fees, and remaining debt proceeds. Available balances within each of the three utilities as of June 30, 2020 are summarized below. These funds have all been set aside specifically to pay for future capital improvements and are added to the overall system valuations used to calculate demand fees.

Water System	\$40,463,000
Local Wastewater System	\$62,372,000
Regional Water Reuse System	\$22,465,000

### ***Total System Valuations***

In summary (and as shown in Exhibit 7), the water, local wastewater, and regional water reuse system valuations for demand fee calculation purposes are as follows:

Water System	\$294,686,000
Local Wastewater System	\$288,329,000
Regional Water Reuse System	\$382,534,000

### ***Water and Wastewater System Buy-In Demand Fee Calculations***

Utility system valuations are then divided by the current demands that exist on each system. These current system demands were derived as follows.

- ***Water System*** – Water demand fees are determined based on the average water use during the peak month of the year. This occurs most typically in July, when irrigation demands are highest. Because water demands can vary from year to year for economic, weather, and water supply conditions, an average of the peak month water demand over a four-year period was selected for this analysis. This four-year period, from 2016 through 2019 coincides with a period of relatively little new development, so the customer base was relatively stable during this period. The average peak month water production within the City of Santa Rosa was determined to be 23.11 million gallons per day (MGD) based on water production records. This production amount was reduced by 8.0 percent to reflect water system losses to arrive at a peak month water demand of 21.26 MGD.
- ***Local Wastewater System*** – The local component of the wastewater demand fees is determined based on the average dry weather flow (ADWF) from the City’s wastewater collection system into the regional water reuse treatment plant. This typically occurs during the dry season in late summer, when infiltration and inflow is a minor flow component. Similar to water demands, the ADWF was determined by taking an average over a four-year period (2016 through 2019). The ADWF from the City’s wastewater collection system during this period averaged 10.43 MGD.
- ***Regional Water Reuse System*** – The regional water reuse component of the wastewater demand fees is determined based on the total regional ADWF. Following the same

calculation of a four-year average ADWF, the current regional water reuse system demand was determined to be 14.03 MGD.

**Exhibit 7** summarizes the water and wastewater system buy-in demand fee calculations. Wastewater demand fees are comprised of a component for the local wastewater collection system and a component for the regional water reuse system. The calculations are based on the information described in the previous pages and include present values of existing facilities, financing costs, and capital fund reserves, as well as the deduction for outstanding principal on long-term debt.

<b>Exhibit 7</b>

Plus Capital Funds Available	\$ 40,463,000	\$ 62,372,000	\$ 22,465,000
<b>Total System Buy-In Valuation</b>	<b>\$ 294,686,000</b>	<b>\$ 288,329,000</b>	<b>\$ 382,534,000</b>
Current System Demands (MGD) (2)	21.26	10.43	14.03
Base Demand Fee (\$/TGD)	\$ 13,860	\$ 27,644	\$ 27,265
Base Demand Fee (\$/TGM)	\$ 456	\$ 909	\$ 896
<b>Proposed Base Demand Fee (\$/TGM)</b>	<b>\$456</b>	<b>\$1,805</b>	
Change from Current Demand Fees (3)	55%	15%	
<b>Notes:</b>			
(1) From fixed asset records as of June 30, 2019.			
(2) Based on the average of annual values from 2016 through 2019. Peak month water production was reduced by 8.0% for system losses to reflect water demand. Average dry weather flows (ADWF) based on data from City's wastewater collection system and regional water reuse treatment plant values.			
(3) Fee increases are offset by reductions in the usage factors.			

The system buy-in water and wastewater demand fees shown near the bottom of Exhibit 7 are determined by dividing the total system valuations by the current system demands, resulting in a buy-in fee for each unit of demand. These are initially expressed as dollars per thousand gallons per day (\$/TGD), and then converted to dollars per thousand gallons per month (\$/TGM), consistent with the current fee schedule. The resulting *base* system buy-in fees are: \$456/TGM for the water utility and \$1,805/TGM for the wastewater utility (\$909 for local wastewater plus \$896 for the regional water reuse system). These base demand fees are used to calculate the demand fee schedules that are specific to residential development types and are also applied to the estimated water and wastewater demands for each non-residential development project.

### *Water and Wastewater Demand Fee Schedules*

Water and wastewater demand fee schedules, as well as comparisons with current demand fees, are presented below. Residential water use and wastewater flow factors have been revised to reflect updated information. In addition, the current residential category for condominiums, apartments, and mobile homes (which included duplexes and triplexes has been separated into two categories, such that duplexes and triplexes are their own category. This change is appropriate because this group often includes irrigation usage within the domestic water connection, whereas condominiums, apartments, and mobile homes parks are generally required to have separate meters for irrigation. The current category for second units or senior housing units is also expanded and more specifically articulated to include large ADUs (750 to 1,200 sq. ft.), single resident occupancy units, senior housing units, and small high-density apartment units. Small, high-density units are the units in a high-density development where the average unit size is less than 750 square feet.

#### Water Demand Fee Schedule

The proposed water demand fee schedule is based on the base water demand fee of \$456 per TGM (see Exhibit 7) and estimated water use factors for various types of residential development. Water demand fees for non-residential development (commercial, industrial, and irrigation) are based on estimated water demand for each new connection. **Exhibit 8** summarizes the water use factors used for various types of residential development within the City of Santa Rosa. The use factors were compiled by averaging the peak month water usage over the four-year period from 2016 through 2019. Water demand fees are calculated based on the average day peak month water demand estimates for each type of residential development identified (expressed in gallons per day (GPD) and thousands of gallons per month (TGM)).

<b>Exhibit 8 Santa Rosa Water Water Use Factors for Water Demand Fees (1)</b>		
<b>Type of Development</b>	<b>Avg. Day Demand During Peak Month</b>	
	<b>(GPD)</b>	<b>(TGM)</b>
Single Family Residential		
Lot over 1 acre	598	18.2
Lot over 6,000 sq ft up to 1 acre	381	11.6
Lot up to 6,000 sq ft	260	7.9
Duplex and Triplex Units	204	6.2
Condominium, Apartment, and Mobile Home Units (2)		
with Separate Irrigation	122	3.7
without Separate Irrigation	158	4.8
Large ADUs, SROs, Senior Housing, and Small, High-Density Apartment Units	99	3.0
Commercial, Industrial, and Irrigation (per TGM) (3)	33	1.0

**Notes:**

(1) Based on analysis of peak month water usage from 2016 through 2019.

(2) Includes complexes with 4 or more dwelling units.

(3) Peak usage for each commercial, industrial, and irrigation account is estimated on a case-by-case basis.

The water usage factors presented in Exhibit 8 are lower than the factors used in the 2014 demand fee study. The lower factors appear to be the result of the drought that occurred in 2015 and 2016, which has had a lasting impact on water usage. It is recommended that the City continue to monitor the water use characteristics of residential parcels to determine if average demands continue to be reduced and peak demands attenuated. If so, this could affect the demand fee calculation in the future.

**Exhibit 9** summarizes the proposed water demand fees, as well as the current water demand fees, for comparison. While the base water demand fee (\$456/TGM) is increasing, some of the residential fees will be lower due to decreases in system demand per connection. The changes in residential fees are a function of both the change in the base fee and the changes in the water usage factors.

<b>Exhibit 9</b>			
<b>Santa Rosa Water</b>			
<b>Current and Proposed Water Demand Fees</b>			
<b>Type of Development</b>	<b>Current Water Demand Fee</b>	<b>Proposed Water Demand Fee</b>	
Single Family Residential			
Lot over 1 acre	\$ 8,114	\$ 8,299	
Lot over 6,000 sq ft up to 1 acre	\$ 5,645	\$ 5,290	
Lot up to 6,000 sq ft	\$ 2,881	\$ 3,602	
Duplex and Triplex Units	\$ 2,646	\$ 2,827	
Condominium, Apartment, and Mobile Home Units (1)			
with Separate Irrigation	\$ 1,411	\$ 1,687	
without Separate Irrigation	\$ 2,646	\$ 2,189	
Large ADUs, SROs, Senior Housing, and Small, High-Density Apartment Units	\$ 1,323	\$ 1,368	
Commercial, Industrial, and Irrigation (per TGM) (2)	\$ 294	\$ 456	
<b>Notes:</b>			
(1) Includes complexes with 4 or more dwelling units.			
(2) Applied to estimated average day demand during peak month in TGM for each non-residential water connection.			

#### Wastewater Demand Fee Schedule

The proposed wastewater demand fee schedule is based on the base wastewater demand fee of \$1,805 (see Exhibit 7) and estimated wastewater flow factors for various types of residential development. Wastewater demand fees for non-residential development (commercial and industrial) are based on estimated wastewater ADWF for each new connection. **Exhibit 10** summarizes the wastewater flow factors used for various types of residential development within the City of Santa Rosa. These use factors were determined by examining the winter water usage (sewer cap) of connections to the local wastewater system and were compiled by averaging the sewer caps over the four-year period from 2016 through 2019. Wastewater demand fees are calculated based on the wastewater flow estimates for each type of residential development identified, as determined by the sewer cap.

<b>Exhibit 10</b>		
<b>Santa Rosa Water</b>		
<b>Wastewater Flow Factors for Wastewater Demand Fees (1)</b>		
<b>Type of Development</b>	<b>Average Dry Weather Flow</b>	
	<b>(GPD)</b>	<b>(TGM)</b>
Single Family Residential		
Lot over 1 acre	128	3.9
Lot over 6,000 sq ft up to 1 acre	108	3.3
Lot up to 6,000 sq ft	105	3.2
Duplex and Triplex Units	92	2.8
Condominium, Apartment, and Mobile Home Units (2)	92	2.8
Large ADUs, SROs, Senior Housing, and Small, High-Density Apartment Units	72	2.2
Commercial and Industrial (per TGM) (3)	33	1.0

**Notes:**

(1) Based on analysis of winter water usage (sewer cap) from 2016 through 2019.

(2) Includes complexes with 4 or more dwelling units.

(3) Wastewater flow for each commercial and industrial account is estimated on a case-by-case basis.

**Exhibit 11** summarizes the proposed wastewater demand fees, as well as the current wastewater demand fees, for comparison. While the base wastewater demand fee (\$1,805/TGM) is increasing, the fees for all residential categories are decreasing. This is because the reduction in usage factors for residential accounts more than offsets the increase in the base fee.

#### **DEMAND FEE ADMINISTRATION AND UPDATES**

While not reviewed in detail, we believe that the City follows required steps for accounting for demand fee revenues and expenditures. For reference, **Appendix A**, at the end of this report, includes statutory requirements for accounting for capacity charges.

It is recommended that the City of Santa Rosa continue to annually adjust the demand fees for the effects of inflation using the *Engineering News Record's* 20-Cities construction cost index (20-cities CCI). The demand fees presented herein have been indexed to a 20-cities CCI value of 11,628 (January 2021). The 20-cities CCI is a broadly accepted construction cost index that attempts to reflect the monthly changes in general construction costs. Adjusting demand fees annually using this index helps the City maintain fees commensurate with inflationary cost changes between periodic comprehensive updates.

**Exhibit 11**  
**Santa Rosa Water**  
**Current and Proposed Wastewater Demand Fees**

Type of Development	Current Wastewater Demand Fee	Proposed Wastewater Demand Fee
Single Family Residential		
Lot over 1 acre	\$ 8,915	\$ 7,040
Lot over 6,000 sq ft up to 1 acre	\$ 7,664	\$ 5,957
Lot up to 6,000 sq ft	\$ 6,725	\$ 5,776
Duplex and Triplex Units	\$ 7,507	\$ 5,054
Condominium, Apartment, and Mobile Home Units (1)	\$ 7,507	\$ 5,054
Large ADUs, SROs, Senior Housing, and Small, High-Density Apartment Units	\$ 5,630	\$ 3,971
Commercial and Industrial (per TGM) (2)	\$ 1,564	\$ 1,805

**Notes:**

- (1) Includes complexes with 4 or more dwelling units.  
(2) Applied to estimated average dry weather flow (ADWF) in TGM for each proposed non-residential wastewater connection.

It is recommended that the City formally update demand fee calculations at least once every three to five years. Fixed asset records, debt obligations, capital spending, development patterns, and demand characteristics can all evolve over time and periodically updating the calculations will help ensure that new development is paying fair and proportionate share of water and wastewater system costs.

Finally, annual demand fee revenues are subject to the fluctuations in the pace of new development. Demand fees are primarily a means of equitably assigning costs of capacity to new development. However, they are often also used as a primary source of capital improvement revenue. Caution should be exercised when relying upon demand fee revenue as a predictable revenue source. In addition, while demand fee revenue can be used to make debt service payments, relying on the revenue for debt payments is risky. Santa Rosa does not rely on demand fee revenue to calculate debt service coverage requirements associated with long-term debt obligations.

## APPENDIX A – GOVERNMENT CODE SECTIONS 66013, 66016, 66022, AND 66023

**66013.** (a) Notwithstanding any other provision of law, when a local agency imposes fees for water connections or sewer connections, or imposes capacity charges, those fees or charges shall not exceed the estimated reasonable cost of providing the service for which the fee or charge is imposed, unless a question regarding the amount of the fee or charge imposed in excess of the estimated reasonable cost of providing the services or materials is submitted to, and approved by, a popular vote of two-thirds of those electors voting on the issue.

(b) As used in this section:

(1) “Sewer connection” means the connection of a structure or project to a public sewer system.

(2) “Water connection” means the connection of a structure or project to a public water system, as defined in subdivision (f) of Section 116275 of the Health and Safety Code.

(3) “Capacity charge” means a charge for public facilities in existence at the time a charge is imposed or charges for new public facilities to be acquired or constructed in the future that are of proportional benefit to the person or property being charged, including supply or capacity contracts for rights or entitlements, real property interests, and entitlements and other rights of the local agency involving capital expense relating to its use of existing or new public facilities. A “capacity charge” does not include a commodity charge.

(4) “Local agency” means a local agency as defined in Section 66000.

(5) “Fee” means a fee for the physical facilities necessary to make a water connection or sewer connection, including, but not limited to, meters, meter boxes, and pipelines from the structure or project to a water distribution line or sewer main, and the estimated reasonable cost of labor and materials for installation of those facilities bears a fair or reasonable relationship to the payor’s burdens on, or benefits received from, the water connection or sewer connection.

(6) “Public facilities” means public facilities as defined in Section 66000.

(c) A local agency receiving payment of a charge as specified in paragraph (3) of subdivision (b) shall deposit it in a separate capital facilities fund with other charges received, and account for the charges in a manner to avoid any commingling with other moneys of the local agency, except for investments, and shall expend those charges solely for the purposes for which the charges were collected. Any interest income earned from the investment of moneys in the capital facilities fund shall be deposited in that fund.

(d) For a fund established pursuant to subdivision (c), a local agency shall make available to the public, within 180 days after the last day of each fiscal year, the following information for that fiscal year:

(1) A description of the charges deposited in the fund.

(2) The beginning and ending balance of the fund and the interest earned from investment of moneys in the fund.

(3) The amount of charges collected in that fiscal year.

(4) An identification of all of the following:

(A) Each public improvement on which charges were expended and the amount of the expenditure for each improvement, including the percentage of the total cost of the public improvement that was funded with those charges if more than one source of funding was used.

(B) Each public improvement on which charges were expended that was completed during that fiscal year.

(C) Each public improvement that is anticipated to be undertaken in the following fiscal year.

(5) A description of each interfund transfer or loan made from the capital facilities fund. The information provided, in the case of an interfund transfer, shall identify the public improvements on which the transferred moneys are, or will be, expended. The information, in the case of an interfund loan, shall include the date on which the loan will be repaid, and the rate of interest that the fund will receive on the loan.

(e) The information required pursuant to subdivision (d) may be included in the local agency’s annual financial report.

(f) The provisions of subdivisions (c) and (d) shall not apply to any of the following:

(1) Moneys received to construct public facilities pursuant to a contract between a local agency and a person or entity, including, but not limited to, a reimbursement agreement pursuant to Section 66003.

(2) Charges that are used to pay existing debt service or which are subject to a contract with a trustee for bondholders that requires a different accounting of the charges, or charges that are used to reimburse the local agency or to reimburse a person or entity who advanced funds under a reimbursement agreement or contract for facilities in existence at the time the charges are collected.

(3) Charges collected on or before December 31, 1998.

(g) Any judicial action or proceeding to attack, review, set aside, void, or annul the ordinance, resolution, or motion imposing a fee or capacity charge subject to this section shall be brought pursuant to Section 66022.

(h) Fees and charges subject to this section are not subject to the provisions of Chapter 5 (commencing with Section 66000), but are subject to the provisions of Sections 66016, 66022, and 66023.

(i) The provisions of subdivisions (c) and (d) shall only apply to capacity charges levied pursuant to this section.

**66016.** (a) Prior to levying a new fee or service charge, or prior to approving an increase in an existing fee or service charge, a local agency shall hold at least one open and public meeting, at which oral or written presentations can be made, as part of a regularly scheduled meeting. Notice of the time and place of the meeting, including a general explanation of the matter to be considered, and a statement that the data required by this section is available, shall be mailed at least 14 days prior to the meeting to any interested party who files a written request with the local agency for mailed notice of the meeting on new or increased fees or service charges. Any written request for mailed notices shall be valid for one year from the date on which it is filed unless a renewal request is filed. Renewal requests for mailed notices shall be filed on or before April 1 of each year. The legislative body may establish a reasonable annual charge for sending notices based on the estimated cost of providing the service. At least 10 days prior to the meeting, the local agency shall make available to the public data indicating the amount of cost, or estimated cost, required to provide the service for which the fee or service charge is levied and the revenue sources anticipated to provide the service, including General Fund revenues. Unless there has been voter approval, as prescribed by Section 66013 or 66014, no local agency shall levy a new fee or service charge or increase an existing fee or service charge to an amount which exceeds the estimated amount required to provide the service for which the fee or service charge is levied. If, however, the fees or service charges create revenues in excess of actual cost, those revenues shall be used to reduce the fee or service charge creating the excess.

(b) Any action by a local agency to levy a new fee or service charge or to approve an increase in an existing fee or service charge shall be taken only by ordinance or resolution. The legislative body of a local agency shall not delegate the authority to adopt a new fee or service charge, or to increase a fee or service charge.

(c) Any costs incurred by a local agency in conducting the meeting or meetings required pursuant to subdivision (a) may be recovered from fees charged for the services which were the subject of the meeting.

(d) This section shall apply only to fees and charges as described in Sections 51287, 56383, 57004, 65104, 65456, 65863.7, 65909.5, 66013, 66014, and 66451.2 of this code, Sections 17951, 19132.3, and 19852 of the Health and Safety Code, Section 41901 of the Public Resources Code, and Section 21671.5 of the Public Utilities Code.

(e) Any judicial action or proceeding to attack, review, set aside, void, or annul the ordinance, resolution, or motion levying a fee or service charge subject to this section shall be brought pursuant to Section 66022.

**66022.** (a) Any judicial action or proceeding to attack, review, set aside, void, or annul an ordinance, resolution, or motion adopting a new fee or service charge, or modifying or amending an existing fee or service charge, adopted by a local agency, as defined in Section 66000, shall be commenced within 120 days of the effective date of the ordinance, resolution, or motion.

If an ordinance, resolution, or motion provides for an automatic adjustment in a fee or service charge, and the automatic adjustment results in an increase in the amount of a fee or service charge, any action or proceeding to attack, review, set aside, void, or annul the increase shall be commenced within 120 days of the effective date of the increase.

(b) Any action by a local agency or interested person under this section shall be brought pursuant to Chapter 9 (commencing with Section 860) of Title 10 of Part 2 of the Code of Civil Procedure.

(c) This section shall apply only to fees, capacity charges, and service charges described in and subject to Sections 66013 and 66014.

**66023.** (a) Any person may request an audit in order to determine whether any fee or charge levied by a local agency exceeds the amount reasonably necessary to cover the cost of any product or service provided by the local agency. If a person makes that request, the legislative body of the local agency may retain an independent auditor to conduct an audit to determine whether the fee or charge is reasonable.

(b) Any costs incurred by a local agency in having an audit conducted by an independent auditor pursuant to subdivision (a) may be recovered from the person who requests the audit.

(c) Any audit conducted by an independent auditor to determine whether a fee or charge levied by a local agency exceeds the amount reasonably necessary to cover the cost of providing the product or service shall conform to generally accepted auditing standards.

(d) The procedures specified in this section shall be alternative and in addition to those specified in Section 54985.

(e) The Legislature finds and declares that oversight of local agency fees is a matter of statewide interest and concern. It is, therefore, the intent of the Legislature that this chapter shall supersede all conflicting local laws and shall apply in charter cities.

(f) This section shall not be construed as granting any additional authority to any local agency to levy any fee or charge which is not otherwise authorized by another provision of law, nor shall its provisions be construed as granting authority to any local agency to levy a new fee or charge when other provisions of law specifically prohibit the levy of a fee or charge.
