Why on earth would you deny the public the opportunity to get a little fresh air: If money is a consideration adjust accordingly !

What next our parks!!

Hello, my name is Rich Reid. I'll get right to it. It baffles me that there is a decision needed here. Why would we choose to have a network that is harmful to living things and fairly easy to hack into when the alternative is not dangerous, a lot harder to get into and is faster? Is it because you believe these frequencies are not harmful? If so you should not have the position you have. It's not difficult to find studies done by the government showing the effects not to mention all the peer reviewed science that is coming out. If you decide to allow this to happen you will in effect be killing people. You guys are living in the same world as I and see all the craziness I see, we really need people in positions of power to stand up against the craziness! There are many like me that do not buy all the BS coming down the pipe. Please do what is right.

Thank you.

Rich
