

Santa Rosa Medical Office Building and Parking Structure

Santa Rosa Memorial Hospital

Santa Rosa, California

October 10th, 2017

Summary of Changes:

This project was presented for Concept Design Review August 3rd, 2017. In response to the Boards discussion, the following changes were made:

- Spanish Fir has been added in a naturalistic arrangement to match the scale of the parking garage and soften its façade.
- The variety of vines used at the vertical planting structure of the Parking Garage have been explored to now include a mix of evergreen and seasonal types; Trumpet Creeper, Evergreen Clematis, and Virginia Creeper
- The south and east elevations of the Medical Office Building have been further articulated by refining the extent of color along the east and letting the color turn the corner to the south façade.
- The connecting canopy between the Parking Garage and Medical Office Building has been expressed with a heavier column base, sloped canopy and light colored soffit.
- The Parking Garage façade at the vehicular entries have been enhanced with a more prominent color and open steel framed canopy.
