Notes

Tonnage Sources: Annual tons of collected waste material were estimated from six months of 2018 records from Recology. Self-haul tons were estimated from seven months of 2018 tonnage reports prepared by the SWCMA.

Recycling and Organic streams: tons shown are inbound tons and include contamination.

Self-haul: self-haul does not include C&D.

Composition Sources: Compositions for Santa Rosa were modeled from waste composition data collected in the last five years from cities in California, including the Waste Characterization Study of 2014 for Sonoma County, and studies performed in the Pacific Northwest, including Seattle and King County.

Inbound Recycling Rate: the ratio of ton collected for recovery (recycling and organics) to the total tons collected (garbage, recycling, and organics).

Diversion Rate: the ratio of tons collected for recovery minus tons of contamination, to the total tons collected (garbage, recycling, and organics).
