Design Review Revision  
The Lodge at Piner Road  
1980 Piner Road

The traffic noise at the intersection of Piner Road and Marlow Road is bound to increase with the added traffic from staff and visitors to this facility. During this review process addressing abatement of traffic noise would be greatly appreciated.

The traffic noise between 6AM and 9AM weekdays is bad, but the noise between 4PM and 10PM is terrible. On Friday and Saturday nights it reaches a point well above 100db. The main offenders are blasting huge speakers in cars (some so bad that the windows in our house rattle from the bass levels) and loud exhaust pipes from motorcycles and customized cars.

It seems the traffic light is often mistaken for the starting line at the dragstrip.

I respectfully suggest establishing a quiet zone (for the good of the proposed facility, of course) Or requesting that the developer be obliged to consult with a sound engineer to improve our sound wall in anticipation of the increased traffic.

Any steps taken during this review process to abate the traffic noise would go a long way to improving the quiet enjoyment of our homes.

Best Regards,  
Linda Pekonen
