Santa Rosa, CA 95401
Alternative Site Analysis

Methodology For Obtaining Candidates

- Crown Castle undertakes this “search ring” effort when the existing site may need to relocate for any number of reasons (loss of ground lease, growth potential, technology changes, etc.).
 1. Identify alternative landlords via mailing campaign (utilizing tax records, or ParcelQuest).
 2. Conduct a zoning feasibility for each alternative location based on proximity to existing location as we must attempt to ‘cover’ the same area.
 3. Complete construction analysis of alternative properties (is site buildable)?
 4. Confirmation through RF analysis that any new location meets the current broadcast objective of carrier(s). No loss in subscriber coverage.
 5. Contact potential landlords based on zoning feasibility, constructability, and RF requirements.
- Primary candidate selected on the above, and final interest from “new” location determines final choice after ranking the above wireless criteria (zoning, construction, and RF feasibility) and landowner interest.
