

PROJECT DESCRIPTION

We are making additional changes to the existing fence design. The solid portion would extend 4' H and then transparency would begin. We intend to use 3" wide wood panels and alternate every other 3" with transparency. This will help to resolve the visibility concerns and add more transparency.

Our response to the public comment regarding the visibility concern:

Thank you for taking the time to respond to the notice of the public meeting. The transparency that is being proposed in the updated project description will increase visibility. The fence is in compliance with the City of Santa Rosa code for the required vision triangle and at the direction of Lizzette Marquez, a Code Enforcement Officer with the Planning and Economic Development Department.

The main concern with visibility on this corner is when vehicles are parked illegally on Badger Rd. due to overflow traffic from Rincon Valley Middle School.
